I agree with MAD SCANNER. Here we are fighting amongst ourselves (I include myself) and what it boils down to, is we are losing our hobby. Well put MAD SCANNER. Let's stick together and save our fighting, and direct it toward the source of our problems.

I will not use profanity nor name calling.

Ekim is 100% correct in his rebut and case.

Maybe you should all read Part 97, Part 95, Dockets 93-1, FCC 94-183, Part 22, Sections 22.905 thru 300, Part 90, Sections 90.203 and I can list many, many more.

Your all looking at the text in the incorrect way, His story is a warning.

Let me refresh everyones memory-Amateur Stations, Techincian Class and above, are authoriized to transmit and receive communications, including voise communications, on902-928. See section 97.301(a). 902-928 is not a "Cellular" band; rather it is allocated to private land mobile radio services under part 90 of the rules. Cellular is regulated under Part 22. The rules and part "do not" override one another.

Get the picture??

Tom-how would you feel if your Local Law Enforcement Agency pulled up and started enforcing Part 95 rules when they do not apply as you are a Amateur Operator. You would be very angry. Or maybe this would be different because it happened to you?.

Same with ekim the Local Law Enforcement is enforcing Part 22 rules when they not apply.

Example: You get caught J-walking and you receive a speeding ticket?

Get the Picture?

And you wonder why we are labeled HAM HEADS.

Step back and look at ekim's case- it is a warning of governmental corruption.

Jim

Bye to all and to all good night, I hope you all learned something

Laugh if you want, but, were the author of this posting located in
south Alabama, there could LITERALY be some validity to what he says.
I have owned and operated commercial two-way and broadcast equipment
for a number of years. Look at what the local sheriff's department did
in a vain attempt to get their thieving hands on my gear!
I have said for years that, were the people in the Baldwin County
Courthouse interchanged with the people in the Baldwin County Jail (I
mean the "prisoners"), there would be no noticeable difference. We
would still have a courthouse full of theives!
Now, please, before you say that I am making this up, get in contact
with me and I will pass along all of the case numbers which are
referred to in this post. Then, you can verify the validity of what I
am about to say.
I just thought that you all might like to know that there are still
lots of areas in our "great" nation that are just as backward as they
have been potraid on television and in the theaters for years.
A couple of years ago, my wife and myself reported the burglary of
our house to the Baldwin County, Alabama Sheriff's Department. This
resulted in nothing more than more repeated burglaries!
Within a month, we found OURSELVES listed on the FBI's 10 most
wanted list for burglarizing OUR OWN HOUSE!
After being "arrested" (more like kidnapped) and held under
rediculously high bonds for some 5 1/2 months, we finally managed to
meet the financial requirements of the bonds (ransom) and left the
confines of this "hell-on-earth".
Now, during this time, these wonderful people, who are only
interested in truth, honesty, and justice, are telling us things like
"We'll take away your children!", "We don't care if you're guilty,
just say you are and we won't take your children". . .
Well, to make a long story short, after 5 straight acquitals (some
of which the judge through out due to what he called "nonexistent
evidence", we are free. BUT GUESS WHAT! Of our 4 children, these

bastards actually managed to take one! BY OFFERING TO PAY A RELATIVE OF OURSTO FALSELY TURN IN A REPORT OF ABUSE AND NEGLECT!
We have proof of this! The girl has now come forward and WANTS TO TESTIFY THAT SHE WAS OFFERED PAYMENT FOR THE FALSE REPORT!
But, will Wonderful Baldwin County, Alabama hear it? They surely don't want to!
Also, the latest trick is to haul us into court every month and insist that we should "hire an attorney". Yet, these bastards are already taking every nickel the two of us earn. We are constantly told that we are late on payments to them, when we, in fact, are not. We have to send copies of receipts and, after several weeks, we get these nice little notices that say (basically) "We recalled the warrants which were issued due to our error. Please remit $$$$ immediately as a re-call fee." Therefore, we pay for THEIR screwups! And, if we don't, they just sign more warrants and then bill us for those as well. It's the biggest ripoff in the modern world. It would seem that, as they have realized that they are wrong, the object of the game is to keep us so broke and penniless that we can't retain the services of a good attorney and put theses jerks back on the straight and narrow.
Any suggestions?

Perhaps this was an antique auction, and what you saw was one of the
older-style U.N.C.L.E. communicators used by Napoleon solo - "Open channel D".

:-)

In article <01bc952c$89d887a0$LocalHost@josephm.ebtech.net>, josephm@ebtech.net
was of the opinion...

I was at an auction and noticed the guy was using a wireless mic on this
frequency.
several scanner web sites have freq. lists for wireless mics but I have
never seen this freq. listed. The unit also had "channel D" on it. Is this
a new group of channels? Does anyone know the rest of the channels in this
group?

Here are some Northern Utah scanner frequencies to get you started:

460.500--Ogden Police Dispatch
460.250--Ogden Police Detectives/Channel 1
155.310--Utah Highway Patrol Dispatch, Weber County
155.745--Utah Highway Patrol Car-to-Car (channel 3)
155.790--Weber County Sheriff Dispatch
155.730--Weber County Sheriff Car-to-Car
154.250--Ogden Fire Dispatch
154.130--Ogden Fire Department Channel 2
156.090--Weber State University Police
154.160--Weber County Fire Dispatch
155.505--Utah Highway Patrol Statewide
118.700--Ogden Airport Tower
154.695--Adult Parole & Probation (AP&P), Weber County
155.565--Utah Highway Patrol Channel 9
154.710--Riverdale/Washington Terrace Police
154.755--South Ogden Police
154.040--North Ogden Police/Local Government
156.030--Roy Police
151.280--Utah Dept. of Transportation, Weber County
153.815--Pleasant View Police/Local Government

155.820--Harrisville Police/Local Government
155.340--McKay-Dee Hospital/Ogden Regional Medical Center
155.280--McKay-Dee Hospital

If I can be of further help in providing you with Northern Utah
scanner frequencies, please post a response to this message or E-mail me.

Yes, that is probably true.

You will notice that most people simply ignore Eric. He is amoung
the likes of Burt Fisher, Jeffrey Herman, and Bill Cheek; most
people have figured out that they only survive to cause trouble
& ignore them.

(although their little outbursts can be tryin sometimes)

Only an idiot would shout his conversations in a public place, and
expect the law to prevent anyone from hearing him. Cellphone and
cordless phone conversations are hardly "private" when they can be
easily picked up with simple, common equipment that's widely available
and/or easily built.

For everyone making followup... my guess is that this is was a joke. :)

Because if you are just buying a scanner to listen to phone calls, you
really aren't getting one for the right reasons, imho. Hopefully I am
right in thinking this guy was just being funny. :)

>services under part 90 of the rules. Cellular is regulated under Part 22.

I have not read the law, and would welcome a link to it from anyone. But I was under the impression that a cellular call is a cellular call wherever it occurs.....The people using those phones were doing so properly, and as such, were under the impression the law protected their privacy.
I appreciate your answers, and we know we are on opposite sides of the fence , but I welcome your enlightenment.

You need to read one more regulation CBr, the regulations you quote, each and every one of them, have nothing at all to do with the Electronic Communications Privacy Act as ammended in 1994. None of the rules you quote, FCC rules, discuss the "interception of Cellular or other communications and then divulging them." Yes 902-928 is a "shared" amateur radio band with several other services. Yes there is nothing wrong with listening to this band, and if you hear amateur radio transmissions on it, you are free to divulge them to whomever you want, just like CB, GMRS, and Broadcast. The "cellular" call he heard was not because of a faulty cell phone, or for that matter, a faulty scanner. All scanners can pick up out of band signals on frequencies where you wouldn't think you would hear them, they are called image frequencies and a product of most receivers. Usually they fall plus or minus the frequency of the IF. An FT50 Yaesu dual band portable, without modification can hear cellular in the frequencies 45Mhz below the cellular band.

The key is that the enforceable act regarding the monitoring of "common carriers" is in the definition of "intercept".

"Intercept" means the aural or other acquisition of the contents of any wire, electronic, or ORAL communication through the use of ANY electronic, mechanical, or other device.

To intercept a common carrier communication (i.e. cellular, PCS, voice pagers) is forbidden (rightfully or wrongly). It does not say to intercept, while listening to a frequency specified in Part 22 of the FCC's rules. It says intercept, period, end of story. It could be aurally, like standing near by the cellular phone user, it doesn't matter under the ECPA.

The REAL question is, did the guy know, or have reason to know, that the signal he was "intercepting" was in fact a common carrier conversation? By his own account, the conversation was rather personal in its content, it would have to have been in full duplex mode (i.e. both parties were using a radio that transmitted to the other on differant frequencies simultaneously with receivers capable of receiving the others transmit freq at the same time as their own transmitter is on), and haveing had several years experience in both 800Mhz and 900Mhz systems, and 900Mhz amateur operations, I would sure like to see it. There are no commercially produced amateur radio transceivers in the 900Mhz ham bands. There are some that will receive there, but no transmit. All commercially available radios capable of being modified to work in 900Mhz are generally not full duplex, but even if they are, they would not normally do reverse splits, i.e. one TX high receive low, the other

rx high and TX low, as would be needed in this story. And then there is the case of the missing callsigns on these boys full duplex 900Mhz amateur operation. I wonder if the cellular disconnect tones were there when the transmitter dropped?

And, the US Gov't gives "Investigative or Law Enforcement officers" the duty to investigate and enforce the ECPA. Check out the definition of those in the ECPA!

The troll was fun, rather entertaining, but getting old. The FCC is not the primary responsible agency for the ECPA. US Customs, Treasury, Justice, and FCC, their role being primarily that of type acceptance or approval of these "cellular scanners" that are now illegal to manufactire in the US.

And, even if he was eventually tried and convicted of this heinous crime against humanity, the very same Act allows for a penalty of no more than a $500 fine under 2511(4)(b)(ii) of the Act.

Part 22 specifies technical standards and license requirements for cellular companies, nothing about eavesdropping on them. Part 97 specifies technical standards and frequency allocations, among other things, for the amateur service, with nothing in it giving carte blanc over other laws.

I gave a link for the FCC rules, so here is one for the Electronic Communications Privacy Act as ammended in 1994:

http://www.eff.org/pub/Legal/ecpa.law

Have fun!!!!

Ed,

Check out the Amendments and challenges pending on your quotes!!!!

Like I said debate it with the FCC, I could care less, I am free and recordless. What goes around comes around.
The press is all over the Sheriff like flys on shit and the Undersheriff has already been demoted.

Your Privacy Act Electronic Communications privacy Act of 1986.. It also states specifics-example: It is Illegal to monitor Cellular Phone Transmission-correct..It only pertians to the Cellular Allocated Frequencies-period...You can beat this to a pulp it won't change... You can not pass a Law that blankets everything...this is what your trying to do here...Your not looking and reading everything massive amounts of amendments & challenges have been added and etc. since 1986

If true, it will be the first retroactive radio ban in history.
Unfortunately, people get told a lot of bullshit by low-level
functionaries in various agencies and then go post it on the Internet
as gospel truth.

> some kind of reading?

YOU *MUST* *MUST* *MUST* USE THE SIGNAL DIRECTLY FROM THE
DISCRIMINATOR!!! The raw datarate is 4800 baud, and the signal
from the earphone jack is too distorted and will cause too many
errors. You cannot get around this, period!

> I am using a demodulator designed for POCSAG
> decoding.

If it is connected to the DISCRIMINATOR output, then it should
work.

> I'm using com port 1. Do I need to go to my com port settings
> and change the bauds to 2400 or will it work at 9600?

Dosen't mater. The interface does not use the UART. It uses one
of the control lines as the signal input. Baud rate settings do
not matter at all.

> I have been pulling
> my hair out for weeks with no results at all. Can someone please help me?

With the money you saved from not having to get a haircut this
month, add a DISCRIMINATOR output to your radio. Then it will
work.

That is correct-intentionally monitoring Cordless Phones and Cellular is sickening. But can not be resonsible for where ever they may pop up in your receiver. If the government does not want this to happen. Start encrypting the signals.

ZaaX:

Help me out here. Where is there a codified right under law for the public to hear public safety agencies? I am unaware of this right in the Constitution or any state laws. I'm not saying that it doesn't exist but I want to know where it is.

Next why do you feel it is important to be able to hear public safety broadcast? Information that is necessary for the safety of the public is given out through the news media.

As a member of a public safety agency, the only thing that I have observed the public to do with the information it gathers from listening in, is abuse the information gained. They rush to dangerous incidents and add to the general confusion. The press arrives at the worst moments and interfers with operational personnel. I've even had radio "enthusiast" ask me for the NARCOTICS channels so they can listen in. I just love going to funerals and seeing wives and kids crying so you can bet I give that information out.

Public Safety agencies don't want you listening in because you don't need to know or have a right to hear information that is confidential under the law. I also know you will find this hard to believe but criminal misuse of public safety information is rampant.

At least three times a year we have some enterprising ham, with illegally modified 2 meter equipment jump on our channel and tell us all about his IQ, what he thinks about the police, and gives us lurid

details of his sex life.

Sorry ZaaX, but I'm all for any ban that will keep the public out of public safety frequencies.

73

Patrick

So now we should not be able to listen to the RADIO now because all radio users misuse the info right?? Sounds a lot like living in Nazi Germany or Iran to me. If I had to depend on the local news media for my info I would be very uninformed. Maybe we should have banned listening to the BBC during the Gulf War because they had a different story than the U.S. media. Where do you get off saying I don't have the right to listen to any frequency? The Comm Act of 1934 does not prohibit listening to anything as long as you
do not repeat anything.

The list of CB Shops is finally available for your shopping &
repair needs
all over the nation.
CB Shops listed from East to West and North to South are available
and
ready to address your needs. Some carry hard to find equipment, and

some carry wholesale parts & equipment.
Whether it's a brand new radio or an old tube type amplifier, your
chances
of finding what you need are much greater and faster with this
brochure.
Use this brochure to shop & compare to enable you to buy at the
best
prices, or to compare what ever prices on labor, etc.
Will save you time and hassles of trying to search the information
by
other means and in the end will more than likely save you some
green$$$$$.
This brochure is LOADED WITH OVER 60 names, addresses,
and telephone # 's of
different shops, shacks, and even, shops on wheels.

This brochure will pay for itself with the time it will save you
in searching
for that one shop that can accommodate your specific needs.
You won't want to miss out on the next great deal !!
Here's how to get your copy of this, fast selling ,
brochure..........

Send $2.00 , and of course, your snail mail address
to.......
(please include your e-mail address)

[NOTE: I am not taking sides (although if I were, it would be on the side of the person overhearing the conversation.) I am just pointing out 1) misstatements about the Radio Act; and 2) What I see as weaknesses in your arguement WRT a defense. [IANAL]

EKIM233 <ekim233@aol.com> wrote:
>
>Question: Does the Cellular Monitoring Laws only pertain to the designated
>Cellular Allocated Frequencies?
>
>FCC Answer: Yes

You forgot to ask if their were laws pertaining to other frequencies. This would be like me using a defense for speeding, the answer I received when I asked "Do the 55 mph limits on trucks apply to cars?"

The Radio Act of 1934 states that NO intercepted communication, cept for Amateur, CB, Ships and Aircraft in distress, and possibly one or two others, may be divulged to anyone not party to the communication. The section you are trying to use to defend your actions, is but a separate redundant rule covering cellular communications.

>Question: Can Cellular Monitoring Laws be enforced on the 902-928MHz
>Amateur Band?
>
>FCC Answer: NO

You forgot to ask if the rest of the "Radio Act of 1934" applied to the 902-928 frequencies. You threw in a qualifier stating "Amateur Frequencies", but the 902-928 band is a shared band, and if you hear an Amateur signal, then you can talk about it... but if you hear a non-amateur signal, you may not (except to the persons party to the conversation)

BTW, little technical nit to those stating "The cell phone users should keep their signals out of the ham band." In most cases, they are, and the signal is remaining within the allotted cell band until your receiver receives it as a cell frequency and does some unintentional mixing and demodulating of the signal and making it appear within the non-cell band. A better arguement would be "Keep your darn cell signals off of my property."

X-Ponder: Would it be all that outrageous, to state as a defense to a direct monitoring of the cell frequencies, that your body was _feeling_ interference within the cell range (as heat, tingling, etc) and you fired up the scanner to legally check for the _interference_ you were receiving. Could a medical doctor, as an expert wittness for the other

side state with 100% belief, that "it is completely impossible for a human body to detect radio waves and determine that they are such."

Such a doctor would probably then become an expert wittness in any case where the police use soothsayers to seek out criminals, in debunking the prosecution's methods.

>31 Attorneys had contacted me regarding this matter and all wanted to
>fight on my behalf and they were all Amateurs that obviously are not
>narrow minded and have had enough of the bull$(%&((#........

IMO, the only part of the law you broke, was divulging the information to a person not party to the communication. You have a possible defense that [NOTE: I AM NOT A LAWYER] there was no way to tell that this communication was not an Amateur communication.

If your case goes further, IMO, [I AM NOT A LAWYER] the case will hinge on "Common Sense". You knew these two other cops which you overheard. Did you know them to be Amateur Radio Operators? If not, did you wonder why they were on the Amateur band? Were you aware prior to your arrest, that out of band images are receivable by scanners and other IF circuit receivers? Was there information in what you overheard which might clue you in to the fact that this was not an Amateur communication which you were receiving?

Now, before you get defensive on me, let me ask you how many times as a cop, have you expected a suspect to have used "Common Sense" to determine that what he was about to do, or did, was against the law? How many times has a suspect stated to you "I didn't know it was illegal" and you might have responded with "Didn't you think it through sonny?" [Sorry, bit of the stereotyped Southern trooper there]

I wish you the best of luck in your case. It's time for the ones who expect privacy, to realize that the government SHOULDN'T baby them, but rather that they should look out for themselves. When they use a Cell Phone, they are using a radio device. If they want the convenience of such a radio device, but yet want privacy, then they should be sure to encrypt their signal so it is NOT READILY AVAILABLE TO THE PUBLIC. Unfortunately, "Common Sense" doesn't go over well within the government all that well either, and even though the Feds have been shown that your typical wino can purchase a cheap, used B/W TV from Saint Vincent De Paul or the Salvation Army, and plug it in a receive cell phone calls (If that isn't the lowest on the General Public totem pole, I don't know what is) without any modifications whatsoever... they appease the lobbying interests of the Cellular Industry with mostly unenforceable pacifier laws which do nothing but hide the problem from public view.

The scanner laws, while they may give the appearance of privacy to the cellphone users, and the rare prosecution of an individual eavesdropper will "prove" that it works, the dangerous eavesdroppers, the PI's, the Corporate Raiders, the Corporate Spies, are NOT going to get caught and WILL cause more damage to the intercepted victims

than will the curious individual.

>So if the above is Federal-how can states impose Laws on Cellular that
>were placed on the books on State Level, 20-years prior to Cellular Phones
>even being invented? This is my point.

Good point. [apprx quote] "The laws not given to the Federal Govt, are reserved for the States"... That always puzzled me about the California cordless phone law, and how they expected to be able to enforce it.

>They are using Laws to Blanket
>everything-which as far as I am concerned it incorrect. The Laws I was
>charged with are for Wiretapping on a telephone line. (you know
>hardline!). This is what I am debating the State Controls and Laws.

I'll tell you why... The reason they are doing it, is because they can do so without repercusions. The law is on their books, and has never been challenged perhaps. They get the defendant to plea-bargain down and not challenge it, or to roll over and take the punches without appealing to a Federal Court. "Because they can" comes to mind. Has anyone challenged the state laws beyond the state level? (I'm asking, I don't know.) FYI, I wouldn't expect the ACLU to help you... I seem to recall that they are on the other side of the Cellphone battle. Idiots.

Unfortunately, IMO [IANAL] I believe the federal laws could also be applied to you. If the feds don't do so, and if the intercepted "citizens" don't mind airing the dirty laundry they discussed, they could take you into a Federal court under a civil suit for violating the Federal law.

Many years ago, I was in a similar predicament. I had overheard something [criminals doing a "stake-out"] on the VHF ittinerant frequencies. On the third day, after hearing them go silent two hours before, I heard a police call mentioning a person tie-wrapped on the corner where I had deduced the stake-out was. I jumped the gun and called the police and told them that I had possible information pertaining to the crime... THEN I contacted the FCC and an Official Observer (FCC Volunteer) and mentioned my dilema about mentioning the interception. Both had told me what I already knew, that I could not legally pass on the information... and both suggested that I might anonymously send the information to the police instead... but I had already notified the police that I had information, so that was not really an option.

I was fortunate, and even my testiomony about what I heard over the radio went unchallenged in court. [It was the sort of testimony, that while not direct evidence in itself, opened all of the other doors to the cops. Had it been a cop who overheard the transmissions, I have no doubt that all the resulting evidence would have been considered tainted.]

BTW: One of the perps was a former cop, fired for police brutality, and is now doing time, along with his ex-captain, for murder.
The cops and the DA really wanted to nail this guy, to make

an example of him... the murder charge resulted from a gun they found when searching his apartment on the case I was a wittness to. Finally, about seven years later, lacking any additional evidence on the murder, they allowed two members of the four (including the one who fired the fatal bullet) to give testimony in exchange for immunity, so that they could nail the ex-cop and his former captain on the murder charge.

The case turned out fine... there were no repurcusions for divulging the contents of a radio conversation. I had mentioned to the cops when they first interviewed me, that it might cause a problem. The cop didn't care, and said that it would be up to the DA whether it was admissable or not. (Obviously the cop wasn't thinking about all his evidence being tossed out.) If I had to do it again, I probably would send the information to the police, anonymously, and without any information as to how it was obtained.

Now, to the "Show us proof or shut up!" crowd... I have half the mind to say "Fuck you if you don't believe it is the truth." Should I have to state the case numbers? I have nothing to prove to anyone. If you don't believe me, I don't give a shit. Guess what... While I have a file in front of me with newspaper clippings of the case, I don't think I will post any information about it, just to spite the ones so quick to shout "Lie!" It happened nine years ago (I'll tell you that much) and it really has no bearing on cellphone interception, being arrested for divulging overheard information, or for being a ham with ham equipment. Oh, but this might disappoint some... I used to drive an ex-cop car (74 Monacco - a Bluesmobile) with an antenna farm, and did get pulled over once for an FI... seems that someone in the county was impersonating a cop and trying to pull over cars on the highways... a few years ago, I found out it was the same gang mentioned above in this other case. The cop had different PC for pulling me over (a cracked windshield which he determined was LEGAL as it didn't interfere with my view of the road) but then "asked" me about all the radios (one of which was on his frequency) I mentioned that I was a HAM, and he responded "I thought so" and let me go... even though I mentioned that I had heard him on my scanner... shucks! What is this world coming to when a Ham can't get arrested for having a scanner in the car. [Within the same week, another police agency officer ran my plates without following me, and a third ran my plates while following me but made a U-turn to chase down a speeder. Either was a slow-crime week, or 5 antennas on a Bluesmobile looks suspicious... not to mention the two business band radios on the seat, and HTX-800 and a P-200.)

Just buy your scanners now if you don't have them already! Jeez, they
are not going to come and take them away from you! And I am sure some
enterprising individuals will buy thousands of them and rent them at
the track. You people kill me. I guess you would rather have people
listening in on your cellular conversations and bank transactions than
to give up being able to buy a scanner in the future. You know what I
do everyday at lunchtime at work? I scan and listen to cellular
conversations! You wouldn't believe some of the things I hear.
Congress has to think for you because you can't think for yourselves!

I am looking for the new Haldimand Norfolk Regional Police frequencies.
They are currently using the new and and old frequencies at the same time.
They are going to be digital but at the moment they are using both systems
Can any one help???
thank you

There you go, you answered your own question! That's all it takes, just
two operators to hold a conversation. So, if you hear these hams and
assume they ARE hams, you better stop listening, because you might be
breaking the law. I don't mean to flame you, TOM, but I am just trying to
make a point. I feel EKIM could have not known the difference because his
signals were weak as he stated.

Hey Bob! I can't believe you wasted a bullet on a LEO. Personally, I would have ignored the officer, drove forward, and when the officer was lined up in my rear view window, I would have slammed the transmission into reverse and ran th SOB over; several times.

It's nice to see that SOME people are NOT constipated and STILL have a sense of humor, these days.

scanner. [stuff deleted]

No arguing that it would be unfair, but if you were out of $600-plus would
you be so fair as to say, "Let it go, because I've been a baaaad boy?" I
doubt it. It's a lot easier to suggest what is the proper and moral thing
to do when someone else assumes the risk.

Ed,

Keep on doing your research you should get to the point..

Quote from Bill Cross, FCC, Office of General Councel (Attorney)

Quote:

Cellular Monitoring, Recording and Deluging ONLY pertain to CELLULAR BANDS DESIGNATED IN PART 22 OF THE REGULATIONS. The Frequencies are listed in SECTION 22.905 (860-896MHz). THERE ARE NONE IN THE 902-928MHZ RANGE THEREFORE THE REGULATIONS REGARDING MONITORING, RECORDING AND DEVULGING-DO NOT APPLY.....

Trouble with you is you live in a bubble....

John,

Still waiting for your List of EXPERTS.
Still waiting for your LAWS.
Still waiting for your REGULATIONS.
Still waiting for anything that tells me your EDUCATED.

Also still waiting for the type of Transceiver/Receiver that you are using to monitor 27.875 MHz.

You stated to earlier that you pulled over by the Police with a scanner and was not ticketed. Complaint number #, Department, Year and etc. Are you lieing, so you try and fit into these newsgroups.

Well, your illustrious FCC General Councel wasn't quoting from the recently passed Telecommunications Act, Section 705, as I cited. The pertinent section doesn't specify frequencies at all.

Ed

We have numerous 900MHz transceivers on the air in my area.

We have numerous 900 MHz Phones on the air in my area.

The converstion only lasted approx. 30 seconds and the contents were a determinant to my co-workers welfare.

Let me enlighten you on the Laws-per the FCC.

Cellular monitoring, recording and devulging ONLY pertain to Cellular Bands designated in Part 22 of the regulations. The frequencies are listed in section 22.905, and are 860-896MHz. THERE ARE NONE IN THE 902-928MHz RANGE THEREFORE THE REGULATIONS REGARDING MONITORING, RECORDING AND DEVULGING-DO NOT APPLY.

The above is a qoute from the FCC.

If you are a Amateur aren't you upset on all that is going on or don't you hear about it?

Amateurs getting arrested and convicted under Part 95 (CB Regulations)!!

Amateurs getting arrested and convicted for Interference on Neighbors Cordless Phones!!

Amateurs that are pulled over on Traffic Offenses-having there eqiupment confiscated, and wrongfully charged!!

That is the trouble way to many people just sit back and hide-donothingers!!!

But yet they have all the answers. Tell me the Specific Law that I broke as a Amateur-ARRL, FCC and 31 Attorneys say I am correct and have not even counted the Amateurs that have e-mailed backing me all the way..

Enough is enough..

Sorry, but, just because you got busted for being a wanna-be doesn't mean
everyone else out there is "playing cop" (although many hams and non-hams
do). Punishing everyone for the stupid actions of the few who abuse
something isn't right. And since when should it be a crime to know what
our public safety people are doing? Oh, I forgot, we live in the USSA, not
the USA anymore.

I'm not so sure that this is a case of "silly terms". If my foggy
memory serves me, the term originates from early wireless days, and
was used when maritime radio operators needed a morse transmission
relayed via "land line" from the coast to an inland location.

Mark

Well, John, did you do your research as I did and as I suspect others have? Look up the case numbers provided by these people, and you can read the FACTS. Nothing was mentioned about interference of any kind. I have reason to belive these two gentle, especially now that I investigated the facts. Why don't you do the same? What ever happened to innocent until proven guilt? Since they were NOT charged for interference, what gives you the supreme right to change the ruling?

> John

Message-ID: <19970720021101.WAA00318@ladder02.news.aol.com>
Source record: 191134

You all debate the following all you want it will your lose in the long run.....

#1. Amateur Radio Operatrs. are being arrested under Part 95 (CB Regs) by Local Police.

#2. Amateur Radio Operatrs. are being arrested for Interference on Neighborhood Cordless Phones.

#3. Amateur Radio Operatrs. equipment is being confiscated on normal traffic stops.

#4. Scanner Buffs are getting the bone by the FCC and Privacy Acts.

Sit down some time and make 3 columns-on the first column list your scanner and the frequence coverages down the column-on the top of the second column list the frequencies (check all the FCC regs & Privacy Acts and etc. you can find)
that are ILLEGAL to MONITOR-on the top of the third column list the frequencies that LEGALLY you can monitor-not much left is there? Actually you mays well use your scanner as a paper weight.

The bottom line is that the FCC has to approve all frequencies for Scanners and Amateur Radios sold in the United States-correct? Then in turn pass laws prohibiting the monitoring of the frequencies they just approved!!

You have subjects in this Newsgroup stating that you can not have a Scanner in a Vehicle as a Amateur but if you do you can only monitor Amateur Bands-give me a break my Standard 5900 receives 40-1020 Mhz (Cellular Blocked) and I can not listen to it-ya okay. SHHHHH- I shouldn't talk about it-ya okay.

#5. What are you Amateurs going to do when they pass the Law next year prohibiting Scanners and Amateur Radios from receiving the 40-50MHz Band? Just sit around and say SHHHHH don't talk about it. Call the FCC tomorrow and find out that your $1200 Kenwood TS 60 will be technically Illegal to own because it is able to receive Cordless Phones!!!

#6. What are you Scanner Buffs going to do if you do not know already that the Scanners you have that are Modified for Cellular Phones or Manufactured prior to 1994 without the Cellular Blocks carry a $10,000.00 Federal Fine!! Ya that is correct just put on the books in February 1997-buddies..

And last but not least for the ones that still debate my case regarding arrested on the 900 Mhz band for Cellular.

Here is a qoute and the exact regulation from the FCC-ie. THE BUBBLE BUSTER AUTHOR----Cellular monitoring, recording and devulging ONLY pertian to Cellular Bands designated in Part 22 of the regulations. The frequencies are listed in Section 22.905 (860-896Mhz). THERE ARE NONE IN THE 902-928MHz range therefore the regulations regarding monitoring, recording and devulging DO NOT APPLY-This a quote from the FCC-If I had a Scanner for my Computr. I would post the letter...

Hope everyone has large amounts of money-because if you all ever get caught you will need it-just to prove a point, that is all you will be doing in Court Just Proving a Point.....

The above is FOOD FOR THOUGHT-I have to go and work some stations ON MY DESIGNATED HAM BAND 900MHz-WHO KNOWS MAYBE I WILL BE ARRESTED FOR TALKING OVER A CELLULAR PHONE CONVERSATION....

OH-And one other item for all the non-believers and know it alls-NOBODY CAN LISTEN TO A CONVERSATION on a scanner/radio and specifically tell you what they are transmitting on-and if you know it all think you can than you better contact the ARRL (Chris Emlay) of FCC (Bill Cross) or some other such place you will make a MILLIONS....The Crime Labs, FCC, ARRL and etc all listened to my conversation overheard and quess what nobody could figure out what they were talking on.

Good Luck and remember SHHHHH just listen (keep hiding in your shells)...

The best one I read was "after you open the box and remove your scanner do not talk about anything you hear" this must have been e-mailed from behind the Iron Curtain for Christ sakes.

How much are you people going to stand for? Is the entire word going to keep QUITE-SHHHHHH do tell nobody..

Now

Or maybe a modified 2510-Illegal-correct
Or maybe a modified Galaxy 88-Illegal-correct
Or maybe a modified 2950-Illegal-correct
Or maybe a bootleg CB'r-Illegal-correct
Or maybe a Amateur Opertr. operating out of band-Illegal-correct!
Or maybe a Modified Scanner-Illegal-correct!
Or maybe a Import Scanner or Radio-Illegal-correct!

I could fill your spooler with Or Maybe---s

I just want one of the know it alls to forward the specific law that pertians to Cellular when they are heard out of band. Are you responsible-no you are not-and I will receive non-because they don't exist!!

Thomas I do not know what you run (bands), of course on the other hand I do not care. But some day if you ever transmit on say 905MHz and your transmitting on top of Cellular Phone, then your Cellular Company & Law Enforcement come to your home because they looked up your callsign and they threaten you with charges and such maybe you will see the light..

Enough is enough of the broadening of Laws-And when the Law is put effect next January making your Kenwood ts60 Illegal to own because it is capable of receiving Cordless Phones. Call the FCC and ask them-after these laws are past for instance- owning Scanners that are Manufactued prior to 1994 are illegal if they are capable of receiving Cellular $10,000.00 Federal Fine. Law put in effect February 1997. Same will hold true for all your Amateur Equipment next year-just like owning a unregistered handgun.

But like a majority-SHHHHH don't talk about it.

Come Thomas you are a Amateur-two sides to every story.

I want him to post his equipment-he never answers a request justs spouts off.

Got to fly-school is over-2-meters is open, time to speak to Amateurs....

Trouble with the FCC General Councel is he's incompetent!?

Try this... a correction to my previous followup:

Electronic Communications Privacy Act of 1986:

Section 2511, (1) (c) states:

... any person who intentionally discloses, or endeavers to disclose, to any other person the contents of any wire, oral, or electronic communications, knowing or having reason to know that the information was obtained through the interception of a wire, oral, or electronic communication in violation of this subsection, shal be punished as provided in subsection 4...

Its pretty clear in the above that it the disclosure of intercepted communications covers far more than cellular phone traffic. That guy with the ham rig has admitted to commiting a felony according to the above ECPA law.

Ed

PS This ECPA text can be found at numerous web site by doing a search on its title.

Again, your FCC source is full of crap, or you are. I just posted text quoted from the Electronic Communications Privacy Act of 1986. It expressedly forbids the disclosure of ANY intercepted communications, cellphone or otherwise. Read it, numbscull, or look it up for yourself, if you think I misquoted.

ECPA of 1986, Section 2511 (1) (c).

... any person who intentionally discloses, or endeavers to disclose, to any other person the contents of any wire, oral, or electronic communications, knowing or having reason to know that the information was obtained through the interception of a wire, oral, or electronic communication in violation of this subsection, .. shall be punished as provided in subsection 4 ...

Qoute is dated 05/23/97 @ 15:09:44 EDT.

Debate it with the FCC if you are not updated properly.

Here is another response from the FCC date same as above.

Question: Does the Cellular Monitoring Laws only pertain to the designated Cellular Allocated Frequencies?

FCC Answer: Yes

Question: Can Cellular Monitoring Laws be enforced on the 902-928MHz Amateur Band?

FCC Answer: NO

31 Attorneys had contacted me regarding this matter and all wanted to fight on my behalf and they were all Amateurs that obviously are not narrow minded and have had enough of the bull$(%&((#.....

So if the above is Federal-how can states impose Laws on Cellular that were placed on the books on State Level, 20-years prior to Cellular Phones even being invented? This is my point. They are using Laws to Blanket everything-which as far as I am concerned it incorrect. The Laws I was charged with are for Wiretapping on a telephone line. (you know hardline!). This is what I am debating the State Controls and Laws.

John,

Bonehead #2-Who in the Hell do you think I contacted immediately!! The state and feds..Who arrested me, the state!!!
The feds told the state that they should not make the arrest because it overrides federal laws and I am covered with my License. The Feds refused to have anything to do with the arrest because of the Grey Areas..

Stick with your CB Radio you obviously no nothing regarding these issues..Break 19 anyone have a copy in Canton??? 10-4 chicken choker go ahead-dererererere!!!!

And you keep qouting Law -post the Law we would all love to read it?? Or is it the SHHHHHH Law-Don't talk about it.

10-4 do you understand this?

The Press was involved made headlines throughout the State-Congressmen did call and send letters to the FCC and etc.
But it just died out in the Press-they are after the Sheriff daily now for such a corrupt dept., hiring practices and such, let them go after him, I love it...He will be loosing his appointment shortly, they have already demoted the Undersheriff-he is no longer Undersheriff anymore. Ha ha.

1994. Contra Costa's new radio system.

Newsgroup: rec.radio.scanner
Date: 1997-07-20 00:00:00 UTC
From: tweek@netcom.com-NO.SPAM-
Message-ID: <EDLMDx.63M@moraga.ness.com>
Source record: 191143
Cross-posted to: rec.radio.scanner,alt.radio.scanner

It appears that Contra Costa County recently (over the last two weeks) has (and still is?) reconfigured their Sheriffs radio system. While monitoring CCSO Channel #1 (155.19), formerly the Lamorinda and West County dispatch frequency, there appears (starting today) repeater (crossband?) rebroadcasts of Pittsburg (East County). The Lamorinda agencies are not being repeated over the VHF channel, while the East County agencies (via 450 link?) are retransmitted on the VHF side.

This alone is interesting, as Pittsburg used to be on CCSO#4, crosslinked from 450mhz access. From what I heard in testing last weekend, it appeared to me that the primary link is/has_been moved to a trunked system... (while Lamorinda still accesses from the VHF side)

Now, we've got a shooting in Pittsburg... the scene which is still being handled right now as I type this, but during the response/arrival code-33, while things on the scene still weren't sorted out, the county was also handling a boating accident off of Rio Vista. (Rio Vista is in Sacramento County, but the CCSO has a boat which handles parts of the delta and responded.) The boating accident had happened first, but was being conducted without a code 33 on the channel... but during the code-33 for Pittsburg, several times the Rio Vista incident interupted. Several times the dispatcher told "Rio Vista" to take it to <some other channel>, but "Rio Vista persisted in their use... almost somewhat rudely (Wouldn't CLEMARS or some other mutual aid freq be better for them anyway, as they were working with the Coast Guard and I assume other agencies at the same time) and eventually stated to the dispatcher that they did not have the new radios yet. Also, eventually, CCSO Dispatch told them to take it to channel 5, the normal car-to-car for CCSO.

So... other than the state of confusion, does anyone know what is happening to Contra Costa's radio system? Are they going trunked, or just reconfiguring their circuits (East Co on to CCSO1)... Is East County now trunked, with the primary channel being repeated on VHF and UHF? Does anyone have a handle on the new lineups?

Just wanted to point out that all these regulations you guys are citing, FCC Part 22, Part 95, Part 97, etc, are just that, REGULATIONS, written by the FCC.

The ECPA (Electronic Communications Privacy Act) is a LAW passed by Congress and signed by the President.
Also, it clearly states it is a violation of this law to knowingly divulge the contents of private communications intercepted (in a number of ways.) It doesn't specify frequencies, or services such as Cell phones in this law.)

Per his own words, the guy who started all this admitted to a violation of the above. Also, apparently, he was not charged with a violation of the ECPA, but something else.... still not clear to me.

I never intended to take sides against this guy, but did want to point out his definate lack of good sense in violating the ECPA.... just like that couple in Florida did.

Those of you who have never run into a law officer who is too full of himself, feel lucky. This is a problem probably worse than the violation of the ECPA. It's also a good reason to practice good sense when thinking of putting yourself in a position that might attract the attention of such an officer.

Comments like this amaze me. You mean just because the had an amateur license, they should be absolved of all crimes?
I serously doubt there are so-called "Ham Drag-nets"...where the police leave the call room and head out to arrest anyone with an antenna on their car. BUT, if these guys are perhaps stretching the laws a bit by arriving on crimes scenes, with their "legal" scanner, they should have the book thrown at them. HOW the heck is it these guys keep getting busted???...are they idiots? com'on....I speed, drink...etc behind the wheel of my car, WITH a scanner.....and other than the time I did show up on a crime scene, I have never been stopped. For anything, more less a scanner.
You would think a radio operator worth his beans would know that some serious hassles can come of scanner possesion, and react accordingly.
Sure, you may have a right to posess it, but reality sucks.

Give it upEd, your wrong and the guy that started this meant he was charged improperly.

Get a grip on life, it is the same 3 or 4 people debating the issue over and over again and your are all wrong.

His case has nothing to do with ECPA and he mentioned nothing about it. Christ are you narrow minded.

The rules and laws can not override one another, smell some coffee and wake up.

The couple in Florida was specifically monitoring the Cellular Band and intentionally monitoring, taping and devuling to the news media. This is not even close to ekim's case.

You people add so much it is unbelievable.

What until the pass the legislation that is pending that we give Local Law enforcement agencies the authority to enforce Part 95, do you really think the Cops are going to know the differnce between Part 95 & Part 97, do you think they will even care. I don't think so.

But then if ekim can be arrested as you state operating under Part 97 and charged under part 22, section 705, it really does not matter because your cases will be different because they happened to you.

And before the Ohio-Gasta spouts off-call your congressman the above legislation is pending. So you will not have to type, where, why, case #'s and on and on.

Get a life.

My son died of meningitis in 1995. My wife and I were charged with homicide I has cost us $20,000 so far to get out of it. Our Prosecutor is a convicted felon, but was pardoned by Governor Otis Bowen. He didn't have to serve his prison term. The deputy prosecutor had been fired by another prosecutor for unethical practices. Our attorneys didn't charge us for any fees, but all the other expenses are $20,000. The reason we were prosecuted was that we testified against Child Protective Services at the state capitol because they are totally corrupt. Moral? We were guilty until proven innocent. The prosecutors lied from beginning to end of our trial and have not been held accountable at all. If you think you have rights, you better think again.

Source record: 190843

While rummaging around on the web, I came across this site: web.idirect.com/~teepee/coms/scan.htm. TeePee is a Canadian scanner seller and they have an interface--PRO232--for the 2004/5/6 that sells for $125 (US). It apparently is an autoprogrammer.

I don't have a 2004/5/6 but I'm curious about it. Anyone ever heard of it? It appears that this interface does pretty much the same thing as the CommTronics interface for a lot less money. It comes in a kit but TeePee implies that it is simple to construct (unlike the CommTronics interface, I'm told).

From: jamoran@mail.goodnet.com
Message-ID: <5quv1p$8f4$2@news.goodnet.com>
Source record: 190848
Cross-posted to: rec.radio.amateur.antenna,rec.radio.scanner,alt.radio.scanner

RFI..Radio Frequency Interferance is a common problem when a radio is located near a computer. I've noticed that the noise from my computer and the frequencies varies depending on what the processor is up to...when I'm doing a database sort, the noise and frequency are differnt than when when I'm just dialed into another computer like I am now.

You need to remember that any wires or cables running into or out of the computer can act as antennas and radiate the noise signal.

Using RF chokes helps...as does lining the inside of the Computer chasis with foil. Some monitors are also a source of noise..you can check for this by turning your monitopr off and observing if the noise level changes.

30-50mhz. you didn't say wether you were listening to signals with AM or FM modulation..As you know, AM is more prone to niise interferance than is FM. I have problems hearing the Aircraft on 118.7 and 124.1 when my computer is on..ny computer is only about 4 ft from my radio.

try and get the book "ZZAAP, Taming RFI, ESD, and EMI" at yur library or book store. I found that book athe the University library..had lots of good info in it.

On Sun, 20 Jul 1997 17:14:09 -0400,
in the newsgroup rec.radio.scanner,
Steve S <kf4nnq@hotmail.com>
from Netcom thoughtfully posted:

> I hear that. I found a wireless mic with 178.225 stamped on it. That's
> in the VHF TV broadcast band (Channel 7?) What gives?

Professional wireless mics are allowed on unused TV channels. I
believe they must be licensed to use them.

You'll find most mic's are in the 170 and 200MHz range. The
really good ones are on UHF.

Take a look at this list. It is for the SF Bay Area, but it gives
you an idea of the frequencies used.

http://www.crl.com/~blocktek/wirelessfreqs.html

Also take a peek at the websites for Sure, Sennheiser, Telex,
Nady, etc.

http://www.lectro.com/
http://www.shure.com
http://www.sennheiserusa.com/
http://www.telex.com/
http://www.nadywireless.com/

Or search Alta-Vista for "VHF UHF wireless mic". Lot's of stuff
there.

>for one??
>
>
>

To un block the cell.
first take the case apart, their are 4 screws on the back remove the battery. slide the back of the case down a little. it should come apart easy. next pull the back board apart from the main cpu. it has pinns on the right side looking in the back. you will see a silver plate on the back remove the screws very carefully. remove all the screws from the front baord. now look at the main IC its the large CPU you will see two tabes marked RX and TX now solder two wires to the two tabes marked RX and TX and one black wire to ground. drill a hole in the side of the case and put a 1/8" plug on the side of the radio case. solder the TX wire to the tip of the plug.
Next solder the RX wire to the center pin of the plug . then solder the black wire to the outside pin of the plug. very carefuly put the curcuit board back in to the radio. make sure all the screws are alined and the silver cover is back over the main curcuit board. look to see if the wires are not pinched or bent. Now plug the rear VFO board back in to the CPU board. slide the rear cover back on the back very carefully. put the screws back in to the back. in stall the battery put the cover back on the radio. the next step you will have to do is find a 1/8" plug from radio shack and some zip coard.
solder the zip coard to the 1/8" plug. make very very sure that the zip coard don't short.... now find a plug, you know the kind you use to plug in to the wall.outlet solder the plug to the zip coard plug it in to the wall outlet. wam bam you now have a un blocked trunk tracker. you wont have to do any thing. well execpt for little bit of smoke you should have

fire in the wire.
Warning this may void your WARRANTY.......
now you have it let me know how it works.......

Watching you on the internet & fidonet has shown that to be true
as indicated by your posts. (your statements)

> I know this technique you are using, stir up trouble, go away for a
> while and then come back and blame some convenient target for all of
> it (all the while "appearing" innocent of the deeds you did).

Oh ok Eric if you know this little technique then why
are you walking into it??? You sure like to point fingers
but never take any responsibility for your own actions. How
do you think this thread of "KING ERIC" got started??? I
WAS NOT the originator the thread.

> How about it joh? Care to explain the 18 months worth of postings at an
> average of 4 per day?

You have been accusing me of 18 months of posts since last November
or December but CAN NEVER back that up. You can't because it is
not true. I got my internet access in April of 1996. Even April 1996
to today is not 18 months. But go ahead & prove me wrong, show
a few messages from Dejanews. You won't be able to because you
are either wrong or just plain lying.

> Most of those postings tended to be persoanl
> attacks upon one person or another for not agreeing with your point of
> view.

Actually, SEVERAL people were gatting on a person who was causing
a great amount of trouble on a certain NG. (remember Ron Katz,
tvine, Glen Quarnstrom, flatted5th, & the MANY others. There was
a large majority taking action to rid that NG of the problem. It
took a LONG time but was finally successful as that person
usually behaves on that NG now.

> BIG GIANT QUESTION, John? WHEN ARE YOU GOING TO JOIN THE HUMAN RACE
> (instead of living in your own little world)?

That's the pot calling the kettle black.

> Point of fact, john, you started this particular little arguement by a
> personal attack upon me.

NO I DID NOT start this thread. You better look again if you think
that.

> However, since I know that you will attack me again (and attempt to
> create a situation where I appear to be the bad guy), any further

I can't make you look bad, you can only do that to yourself.

> Since you have no respect for others opinions, I shall not respect
> yours. I will do the one thing that you cannot do. I will weigh the
> facts as they are presented, and make an educated statement of opinion
> based on those facts

Cool!!! You are going to try something NEW. Congrats Eric!!

> I leave it up to you, but don't be too surprised if you don't hear
> back from me on this or anything else you might have to say.

I hope not.

Hi, Roger,
I did reviews of Probe 2.0 and Probe 3.0 for American Scannergram.
They have been reposted at:

http://home.ptd.net/~pro2006/

(I strongly suggest you read both reviews.)

I also was a beta tester for both versions. (I purchased Probe 1.0
and volunteered to be a beta tester.)

I am quite pleased with Probe 3.0. It is a terrific program. While
it is a DOS program, it allows use of older PCs and is very stable.
It has a lot of functionality.

I have no complaints about Probe other than I wish it were a Windows
program, but that is my personal preference. (I'd like to try it out
under Windows NT).

Hope this helps.

> this.

Walter,
The R1 is usually only of interest if you are a collector or really need a radio of its size. And today, the Welz WS1000 is a better buy for a small/tiny handheld.
The R1 scans rather slow and only has one bank of 100 channels. It is very sensitive but to a fault. Unless you live in the middle of nowhere, you will undoubtedly experience lots of intermod. It is bad enough with the stock antenna which is one of the worst ever supplied on a radio.

> Currently, I have a Yupiteru 7100, but its a little tooo big. I need
> something smaller and with a faster scan rate.

Don't think you're gonna have much luck here. The latest R10 is probably about the size you are looking for but it scans at 6 chan/sec and searches at 16 steps/sec. The Welz WS1000 isn't much better at 8 & 20.
Many of the Uniden and Radio Shack models will scan/search very fast but aren't that different in size from the MVT-7100.

Support? How has he supported you Oh Great and Meglomanical One?

Yeah, your "Want I didn't do anything" response is typical but a patently obvious lie. Only two days ago a pair of know-nothings started that thread about "Cheek is a turd" crapola (by changing the subject of another completely unrelated topic no less). I said something to the effect of "Don't start that crap again. Post something worthwhile" and you slithered in to post your usual anti-Cheek drivel and insult those who come to his defense.

Mackey, when you've contributed anything near what Cheek has to this hobby, then I leap to your defense as well. Until then, I'll keep scrapping you off the bottom of my shoe.

I use Probe with the same set up that you're contemplating. There is a web page run by a Probe fan that will give you the info that you're seeking. I'm sorry but I don't know the URL, but if you do a web search, you'll find it easy enough.

I echo the lament that I wish it was a Windows program. The features are terrific. The one I like a lot is " hyperbanks," which allows you to set up virtual scanners assigned to function keys. It's like having 10 (even more) different scanners.

Another anon comes to life. Part 22Section 705 Huh! Rural telephone licensing section, what does it have to do with the case. You are right though, if the locals tried to use this to prosecute, they were all wrong. And any Public defender could have solved this case. 22.705. try the link and read dumbass. It is set up so you don't even have to read each rule, you can go directly to the one you quote.

HF, I don't own any HF equipment. Apparently you can't use QRZ as well as the CBer. And as far as UHF and VHF, you have no idea what I know or don't know. Or how long I have been "knowin" it.
Try accessing the FCC's license data base Part 90, also part 87, and see what you can find. In the search, just use freqs above 470, it will take less time.

Hello to everybody reading this group!
I'm looking for UHF air freqs around Ocean/Monmouth Counties in NJ.
I'm about 20 miles from Lakehurst, McGuire, Ft Dix and have those BIG cargo planes at treetop high flying over the house all the time BUT never hear anything on 225-400 UHF AM!
Anybody near me hear anything????

I have plenty of other public service freqs to share if your within these counties.
Thanks for reading!
Please reply to group or email me (no anti-spam so a reply will work)

Having heard enough rumblings from the direction of the
Capital, I decided that we need a centralized discussion area
for any legal action we wish to take regarding scanning.

So, I created this list (and it's digested counterpart).

To subscribe to this list, send a message like this:
To: scan-legal-request@nomad.n-reading.ma.us
Subject: subscribe
[Message Body] subscribe

The list is available in digested form too. It's address is:
To: scan-legal-digest-request@nomad.n-reading.ma.us
Subject: subscribe
[Message Body] subscribe

Digests go out once a week, Monday mornings.

Tell your friends and spread the word!

Items open for discussion are things like how we can educate
our legislators and the media.

I've been following this thread for a while now and figure its time to put in my $.02

The ECPA states:

(a) intentionally intercepts, endeavors to intercept, or procures any other person to intercept or endeavor to intercept, any wire, oral, or electronic communication;

The key word here is "INTENTIONALLY"

IF he was in fact scanning a frequency range he is licensed to operate on.

IF his receiver was not illegally modified to receive the "FORBIDDEN FREQS"

IF he was receiving an image of a cell call on a receiver type accepted by the FCC and
meeting image rejection standards specified by them.

Then I have NO clue as to how they could PROVE intent beyond a reasonable doubt.

Have you considered leaving monitor and scanner where they are and
putting a wideband scanner antenna on the roof (with appropriate length
of 50 ohm coax, of course)?
Bob

>HUH?

He's saying that one of the easiest ways to cause tons 'o harrasment
to an enemy, neighbor, or friend, is to report them to your local
Child Protective Services and your target is automaticaly considered
guilty until such a time that he/she can prove their innocence. It's
that old "For the Children" attack, commonly considered a "liberal"
thing, but I can guarantee you that the Right Wing Wacko station in
San Francisco has at least one person who claims to be right wing, saying
that the Internet should be controlled "For the Children"... while one
of the most "Liberal" talkshow hosts, on "the other" station thinks
that it is something best left up to the parents.

I called Uniden parts Dept. this morning and found out that the cable is
nothing special, they told me to just go to RadioShack and get an RS-232
cable. Owner's manuals are backordered and probably will never come in. They
had 11 mounting brackets left, now there's 10 and he says that there will not
be any more.
In case anybody is interested, the brackets are $9.16 he offered to put me on
the backorder list for a manual, 7.50 if they ever show up.

He got slapped not because he listened but because he talked about what he listened to. Quoting ECPA and debating the laws of listening is a waste of time. He listened, he opened his big mouth and got slapped. What's the big deal. The law covering this has been around since the 1930's. Gee, the signal was too weak, short in duration and all the other excuses but the listener could hear enough detail to go run to a coworker and repeat it yet could tell that it wasn't a ham conversation. The listened knew the people talking but didn't know they weren't hams. Yada yada yada. He listened, he talked, he was not only wrong but stupid. ECPA and the scanner/cellular laws have nothing to do with it.

Probably a Part 15 device. Any frequency allowed if the device passes
the FCC type acceptance.

See FCC rule section 15.241 Operation in the band 174-216 MHz.

A good reference library in your area should have a copy of the rules.
Ask the reference desk for a copy of "Code of Federal Regulations Title
47, Part 15."

I have two external antennas coming in from outside, one with a coax lead-in and one without. I don't use any internal antennas. I do notice though, when I put my hand near the point where the coax cable connects to the receiver, some noise disappears. I've tried wrapping aluminum around there to block any other signals, but that doesn't help, only when I touch it, this is not the case all the time though.

The scanner has a plastic casing, I know that a metal casing would be much better, but, it's all I have.

The computer itself doesn't not affect noise levels much, it's only when the monitor is on that it affects reception. I've been simply turning the monitor off when i want to hear something, or, just put up with the extra noise. How ever this is VERY inconvenient, sometimes for fringe signals, I must turn the monitor off.

Aside from getting a new monitor, is there anything I can do?

>A couple of things come to mind. Is the scanner housing plastic or
>metal? If you remove the antenna, does the noise drop or disappear?

2068. HR 1964, the latest attack on scanning

Newsgroup: rec.radio.scanner
Date: 1997-07-21 00:00:00 UTC
From: frussle@erols.com
Message-ID: <33d3c138.916503@news.erols.com>
Source record: 190900

I never take someone's word for legislation such as this. So I looked up HR 1964 in the Library of Congress web page (http://thomas.loc.gov)

Sure enough, it's there. It's called the "Communications Privacy and Consumer Empowerment Act."

Here is the relevant excerpt of H.R. 1964:

H.R.1964

Communications Privacy and Consumer Empowerment Act (Introduced in the House)

SEC. 104. EXTENSION OF SCANNER EQUIPMENT MANUFACTURE PROHIBITIONS TO DIGITAL MOBILE RADIO SERVICES.

(a) AMENDMENT- Section 302(d) of the Communications Act of 1934 (47 U.S.C. 302(d)) is amended--

(1) in paragraph (1), by striking `(1) Within 180 days after the date of enactment of this subsection, the Commission' and inserting `The Commission';

(2) in paragraph (1)(A), by striking `the domestic cellular radio telecommunications service' and inserting `a commercial mobile service (as such term is defined in section 332(d))';

(3) in paragraph (1)(C), by striking `digital cellular transmissions' and inserting `digital commercial mobiles service transmissions';

(4) by striking paragraph (2); and

(5) by redesignating subparagraphs (A), (B), and (C) of paragraph (1) as paragraphs (1), (2), and (3), respectively.

(b) EFFECTIVE DATE OF PROHIBITIONS ON REGULATION AMENDMENTS- The prohibitions contained in section 302(b) of the Communications Act of 1934 shall apply with respect to the changes made by the Federal Communications Commission in its regulations to implement the amendments made by subsection (a) of this section beginning 1 year after the effective date of such changes.

And here is 47 U.S.C. Section 302 (d) (as it currently stands):

(d) Cellular telecommunications receivers

(1) Within 180 days after October 28, 1992, the Commission shall prescribe and make effective regulations denying equipment authorization (under part 15 of title 47, Code of Federal Regulations, or any other part of that title) for any scanning receiver that is capable of -

(A) receiving transmissions in the frequencies allocated to the domestic cellular radio telecommunications service,

(B) readily being altered by the user to receive transmissions in such frequencies, or

(C) being equipped with decoders that convert digital cellular transmissions to analog voice audio.

(2) Beginning 1 year after the effective date of the regulations adopted pursuant to paragraph (1), no receiver having the capabilities described in subparagraph (A), (B), or (C) of paragraph (1), as such capabilities are defined in such regulations, shall be manufactured in the United States or imported for use in the United States.

And here is 47 U.S.C. 332 (d)

(d) Definitions

For purposes of this section -
(1) the term ''commercial mobile service'' means any mobile service (as defined in section 153(n) of this title) that is provided for profit and makes interconnected service available (A) to the public or (B) to such classes of eligible users as to be effectively available to a substantial portion of the public, as specified by regulation by the Commission;

Draw your own conclusions.

I can confirm that it's just a standard serial cable. The scanner has
the level-translation electronics inside it, unlike Motorola radios or
pagers.

If there's interest, I can scan and post the owners manual and programming
software manual, as well as the programming software itself.

We don't want this part of the bill to ever get out of committee. You have the text, you see what Rep. Markey is trying to do, now do your part and write to your congressional representation and get them to vote against this bill. While you're at it, you may as well point out how silly and pointless the existing law is.

Laws already exist against those who do more than just listen to scanner traffic. The police merely have to use those laws to prosecute those who use scanners to obstruct justice.

Motorola and other trunking system manufacturers must be very annoyed with products such as the Trunk Tracker. Too bad. Lacking hard encryption, these folks have only themselves to blame. Further, I think police arguments concerning interception are extremely suspect. We have a right, some might even say a DUTY, to monitor our police. It keeps them honest. In fact, I'd like to see a law where one could (anonymously or otherwise) report peculiar police activities heard on the air to an independent internal investigations department.

On the other hand, we have no right to obstruct justice. If the penalties for scanner information abuse aren't stiff enough, they ought to be increased. Those few idiots out there who act like "police wannabees" deserve to have the book thrown at them. Scanner enthusiasts should not be known for doing stupid stunts like calling the phone numbers heard on the air.

The bottom line: this hobby has become the haven of too many "techno-stalkers" who misuse the technology and really should be prosecuted. This awful attempt at legislating is the result. In a way, we are as much to blame as this bill as the dumb-as-rock legislators who conceived it. If you know someone who does this kind of scanning abuse, MAKE A CASE AND TURN THEM IN! You'll be doing us all a favor.

Happy Scanning!

-> I went to the House web site and could not find a H R 1964.
->
-> Someone tell me more about it.

It took me almost 20 minutes, but I went to the House page, then 'bills', then a search for 'radio', and found it.

Try...

http:/thomas.loc.gov/cgi-bin/query/14?c105/temp/~c105hBqt:radio

The bill was referred to the Commerce committee, and also to the Telecommunications, Trade, and COnsumer Protection committee. Nothing else showed as having been done with it.

Be advised, the section in question (104) IS part of a bill to 'protect the children', and THAT will mean stiff opposition to any changes in the bill.

2078. Info on PerCon Spectrum CDROM of Frequencies?

Newsgroup: rec.radio.scanner

Well Mike, Try not to be too puzzled over it. Its not very complex.. Why can't I look and post like anyone else? Your crass opinions are tolerated so why can't I say something? I noticed the attack on Mr. Mackey because I had posted some negative remarks about Bill Cheek and his methods (project execution) awhile ago. He is however technically sound. I just wondered what Mr. Mackey said... that's all..These nasty attacks remind me of the transmissions that I have heard many times on the 80 meter amateur band. That's one reason that I am getting out of ham radio completely and you are right! I don't have much of a life and it's time to get one. :-). 73, Mike K8MB.

True, but....Items that are smuggled over US boarders in violation of US
federal law are typically confiscated and destroyed, rather than being
returned to the sender. USCS returning the items to the seller wouldn't
discourage future transactions of this type by buyer and seller. I doubt
Atlantic has had to make many refunds.

There's a group in the 454 MHz range and another in the 894 to 896 MHz range. Happy hunting!

2088. HS200 vs Pro-67

Newsgroup: rec.radio.scanner
Date: 1997-07-21 00:00:00 UTC
From: dcase@deskmedia.com
Message-ID: <33d3f087.97942892@news.deskmedia.com>
Source record: 190920

Am considering purchasing either the HS200 or the Pro-67. The Pro-67
is onsale at RS for $199 until July 26. The HS200 is around $250. Is
it worth the extra fifty dollars or so?

I recently purchased a Radio Shack PRO-67 Scanner,and I wondered if anyone knows of any possible modifications? This is supposedly a new model, so I do not know if anyone has had time to find any modifications.

Yes, You need to quickly go to ABC broadcasting and to the Fox News Network and tell them your story. Also, you need to contact the

Rutherford institute for some REAL attorneys that will help you.
You have a fanstastic harassment case on your hands and you can sue and most likely win. But, you will need some help and public exposure through ABC's 20/20 or the Fox News Network, or 60 Minutes would do you some real good. Then get some better attorneys to help you burn their asses till they give in.

TWEEK, your sillyness has caught up with you. The Brady Bill, and the
Assualt weapons ban, along with the Radar detector ban were all passed
in 1993 while Klintonoski had a democrat controlled congress silly boy!
You need to make sure you konw what your talking about before you jump
in. And, to top it all off, in 1994, the Congress changed hands for the
first time in many decades. Good Bye Democrats. Maybe you guys on the
left will finally learn that the American public is sick of your sh*t.

If they want privacy, either use a wired line, or encrypt the data.
But the cell phone companies lied to the American public and told them
that noone would listen in because few scanners reached 800 mhz and that
since it was illegal to do so, no person would ever hear them! HAHAHA!
Those goofs.

>are going right down the toilet. The arrogant bastards in Washington believe you are too stupid to run your own life so they are going to run it for you. Do you see what they have done to your rights to own a gun to protect yourself?
>
> Classic right-wing misreading of the constitution.
Classic left-wing misrepresentation and rationalization of the constitution to fit your own liberal 1990's interpretation of the constitution. The founding fathers believed in the rights of the individual including his/her God given right to protect him/herself from tyrany of all forms.
>
> : Have you ever added up the taxes you pay to Government?
>
> Yes, and they're quite small for all the benefits.
You must be a student paying very little in taxes. Try 15.3% to FICA/Medicare, 28% for federal, 6% for state, plus property and sales taxes!!!
>
>You pay taxes when you earn your money, taxes when you spend your money, taxes for owning the property you spent your money on, and your heirs will pay taxes on whatever is left after your gone!!!
>
> Only if you leave your heirs over $600,000. Few people do.
If you have a house, cars, and savings you can easily accumulate over $600,000. Let me clue you and Bill Clinton in. A person with $600,000 in some areas of this country is NOT rich.
>
> : The time is now to take a stand and tell those bastards in Washington that you are not going to stand for this.

>
> Like McVeigh, right?
Wrong! More liberal clap trap. Call every conservative McVeigh to
demonize him/her. I chose to voice my concerns in this forum and within
the present system. I do not chose violence (unlike Janet Waco or is
that Reno) against others who may be of a differing opinion.
>

> between the D of I and the Constitution?
I did not say that this phrase appeared in the constitution. The
declaration of independence is what we celebrate every July 4th as the
birth of this nation. Without the declaration of independence there
would be no constitution. The declaration of independence and the events
surrounding its drafting are the general basis for the rights embodied
in the constitution.

Hiya. After many years here in Southcentral Alaska, I'm taking a little road trip to Southeastern Alaska, around 1,000 miles. I've got to drive through a bit of Yukon Territory and British Columbia to get from Soldotna to Skagway. Anyone know if:
1) Mobile scanners are legal in YT and BC? Yup, I'm a ham, if that makes a difference.
2) How about radar detectors? (No, I'm not driving a commercial vehicle.)
3) Any good (and printable) ideas of where to find freqs for police/RCMP/fire/EMS along the Alaska Highway and Klondike Hwy 2 in Canada? I've spent so many years as a paramedic, I usually count on being the first one on the scene of nearly anything untoward here in "The Frozen North". That likelihood is directly proportional to the distance of an event from an emergency service station, it seems.

Please reply either here or to the addy in the header, after removing the asterisks.

TIA,
--Barney Wilborg--

Absolutely not. Under no circumstances.

Same thing with home cordless phones. You want privacy from scanner listeners, get a wire.

What about people who just don't know they can be heard? Well, I do believe that 'ignorance' is not an excuse when it comes to breaking the law, so why should 'ignorance' to cell phone reception be a factor?

Sean, when it comes to "Landlines" from either the officer or the dispatcher, it will mostly be on the telephone system, that Ma bell operates. In some jurisdictions, I've heard of Landlines being made on the radio system connected to the department radio system.

But in most cases, it's either the Cellphone or the conventional telephone that use everyday for those landlines...

Hope this helps??

Jim, there are 2 "effects" you must compensate for to determine the exact length of a 1/4 wave antenna. These are the length/diameter ratio and the "end-effect". Both of these cause the physical length of an antenna wire to be shorter than the electrical length. This is because electromagnetic fields travel slower in a conductor than in free space. Essentially, the waves compress, causing a wavelength in a conductor to be shorter than one in free space.

For most wire antennas, the L/D ratio is about 10,000. In this region, an antenna needs to be about 2 percent shorter than the calculated free space resonant length. The "K" factor would be 0.98. The formula to use is 1/2 wavelength, inches = 5905 x K / f, where f is in MHz.

The effect can become more pronounced at higher frequencies or larger diameters. For instance, an antenna made of 1" diameter tubing for 144 MHZ would have a ration of about 100, with a K of 0.95.

There is another effect known as the "end-effect" This is really just the capacitance that is added to the antenna by insulators at the end of the wire. This added capacitance causes the wire to resonate at a slightly lower frequency that if it were suspended in free space. The current at the ends does not quite reach zero because of this. The effect increases with frequency and varies somewhat for differentr installations. Experience shows that this effect results in another "K" factor of about 0.95 (5 percent decrease in physical length) up to about 30 MHz.

Since the "end-effect" in generally difficult to predict with accuracy, antennas for exact frequencies need to be "pruned" or tuned with a resonant circuit.

Finally, a good general purpose formula to use is:
1/4 wavelenth length, inches = 2834/frequency in MHz.
This will get you close enough for monitoring activities. Impedance mismatch will probably hurt you much more than inaccuracies in resonant length.

Hope this helps.

Dave

It would appear that if dealers (etc.) are not allowed to "modify" scanners...that would include removing their ability to be modified! Why not just ask them before you send it to them?

That's true. Many of the older wide-band receivers like the Kenwood RZ-1 and Icom R-100 promised much more than they delivered. They are very desirable (especially the cell capable models) with most people seeing them as an "all in one" radio, but overall they are poor performers.

If it is in excellent shape with all accessories and has full 800mhz capability then $350 wouldn't be too bad, but that's probably "top end" for one.

I've heard the 2022 is double conversion and 200 channel while the 2006 is triple conversion and 400 channel. Also the 2006 has fewer coverage gaps. Those are important differences considering the 2022 was only $50 less in their catalogs than the 2006.

I wasn't aware that the Democrats controlled the House, Senate AND
Presidency at the same time within the last six years. You wouldn't
happen to have the Roll for that vote, would you. Something like
238 House members and 63 Senators voted for the Brady Bill. Are
you telling me that all of those were Democrats, operating under
a Democrat majority, with Democrat Majority Leaders?

Hi,
To the many who were interested in the HTX-202 that I offered for trade, thank you. It is on the way to a new home 3000 miles away!
Thanks again to all.
Regards,
Ray Miller N2NJK radioman@localnet.com

2139. Re: To Trade: BC-200XLT Port. Scanner (Near Mint) ? Need BC-800XLT Base Scanner

> bdano@crow.cybercomm.net
>
> Thanks in Advance!
> Bill

Bill the PA Turnpike changes their frequencies every 100 miles.

159.045 - Ohio line to 100 mile marker or there about

159.075 - it goes back and forth across the pike

159.000 - Radar setups

All services along the pike use the same frequencies, ie: police, road crews, fire, ambulance, safety cars, etc.

Sure hope this helps.

I guess this is for a service technician.

I have two scanners that could use a little tune-up. Both are capable of receiving cel-phone freqs. I really don't care to listen to them, who cares what someone is calling about?

If I send them in for an oil change will the technician be obligated to remove that section of frequencies? Although I don't use them, it is a nice option if I would sell the scanners.

Any logical thoughts out there?

Have one.

Good coverage but don't plan on using it as a scanner very slooooow.
$350 seems a bit much as it's been around for over ten years. $100 would
be more like it.

-----BEGIN PGP SIGNED MESSAGE-----

Well, last year and all I was introduced to scanner fun by means of listening to NASCAR drivers at Bristol...between this and playing about with my sister's scanner, the bug has bitten and bitten hard, and I've up and went and gotten my first scanner (one of the little Ratshack Pro-29's they had on sale not too long ago). :) I've got a few questions starting out and all, partly about my new toy and partly on odder scanner stuff...

1) Does anyone know of any interesting tricks/mods/easter-eggs for the Pro-29? (No, I'm *not* asking for how to get cellular phone convos. More on if it's possible to mod it to pick up military air band or 10-meter or if there are down/up converters for this. Also if there's any fun little tricks like test modes and such.)

2) Does anyone have any idea what the Uniden equivalent to the Pro-29 is? (As I gather, Ratshack does much the same with their scanners as with their portable shortwave radios. Most of the Ratshack SW receivers are made by Sangean and can even be bought under the Sangean label--that's all that is different. Based on some of the web docs I've seen most of the newer RS scanners are Unidens.)

For that matter, is there some sort of master list of RS scanners and their "twin" models? (Like the Pro-29 and whatever the Uniden model is, etc.) I'd expect this would be incredibly useful.

3) Is there anyone else who has had any experience or success monitoring data transmissions (i.e. teletype, etc.) on a scanner? (I'm talking here mostly receiving ham transmissions, not anything naughty like snooping on pagers and all.) I'm FIGURING that it should work with Hamcomm and it's little interface, but not entirely sure on this. Is it really more trouble than it's worth in this case?

4) I've heard of hams using 800-band and above for satellite transmissions. Has anyone had any success with receiving stuff like weather satellite transmissions, etc. via a scanner, either directly or using a down-converter? (This could be interesting as a side project if it works. I, for one, wouldn't mind being able to receive EMWIN feeds (from the National Weather Service) with my scanner and a computer :)

And hopefully not everyone is looking at me as if I were a lunatic because I actually WANT to see if I can receive RTTY via my scanner. :)

FWIW, one main reason I did get the Pro-29 is so I can listen to airplanes and such. (All of it is fascinating, but I did miss hearing

the planes when my old, cheap, picks-up-damn-near-everything radio died a few years back.) Based on my toying about with it, it's a good, inexpensive scanner. (Then again, I live in what is a veritable scanner's paradise...UPS and the airport is two miles northwest of me, police station is one mile north, hams all about (and two repeaters about three miles away), fire station is a mile north...I've not even begun to explore stuff like listening in at the Taco Bell and such. :) It serves my needs well, though. What one gets is up to one's tastes and budget :)

We are willing to listen to propaganda now. If it was made mandatory,
the
rebellious parts of ourselves would say f*** you. But get the people
to willing to listen to it, that is happening now. Look at the media
such as Dan Rather. Gov't/Corporate Controlled.

Back in 1980's, we wouldn't put up with this $h!t ! It is interesting
and
SCARY to see the parallel between this country and Nazi Germany. Compare
:

US of Amerika Nazi Germany Note:
------------ ------------ -----
Gun Control yes yes

Law's on radio
receivers yes yes Germany - ban on
SW radio's
USA - ban on
scanners, maybe SW
Media Propaganda yes yes Germany - gov't
controlled
USA -
corporate/gov't controlled
Many laws & regs
incl. being vague yes yes

Animal Rights yes yes Germany - Animal
rights was well
known in Hiter's
time

There are many of us who are absolutely sick of political correctness which has
been very prevalent in the 1990's. Not only it stinks up Acedemia (colleges
and K-12 schools) but now, corporate Amerika. At least in the 1980's which
has been criticized by a few, you didn't hear about downsizing that much,
finding a job was much easier (didn't have to jump through hoops
to get one), you can actually have fun such as joking around. Now, it it so
serious and anal. One exception, I do like the dress down and more casual
dress codes. It seems that you cannot cannot say something without
offending a hypersensetive person.

[SNIP - 100 yrs ago, gun control, gov't propaganda
>

> Where does it stop? Do we simply allow the powers that shouldn't be to
> take our toys away and over time turn us into nothing more than prisoners
> in our own homes chained to our TV sets?

There are many in gov't who feel that we are sub-human and feel that
all we are good for is to be fed gov't propaganda, sub-food
and "pinching a loaf". It is not only $$$$ but power. Some of these people
want to have power like God and control everything. Here is a saying
that is considered politically incorrect in the 1990's,
"Absolute Power Corrupts Absolutely".

The only way to stop it is say NO now ! These are the kind of people
who will take things away piece by piece, bit by bit. They will not
be happy with what they taken away. They will be driven to take away
more.

Brad

Hello All:

I am getting VERY interested in scanning and this is the first time I've read this newsgroup. I'm ready to run out and buy a scanner...but a friend is telling me that I'll never be able to hear any police or fire department traffic because in Memphis, TN they both use 800 MHZ trunking systems.

If that's true, and I can't listen to police or fire depts, it seems that there really won't be much to listen to.

So.......is there much good stuff to listen to other than police and fire?.....and is it possible to monitor 800 MHZ trunked systems? (without spending tons of $$$?)

Also, could someone point me to a FAQ or some other documents that will assist a beginner?

Thanks, John

: You must be a student paying very little in taxes. Try 15.3% to
: FICA/Medicare, 28% for federal, 6% for state, plus property and sales
: taxes!!!

Wrong. The 28% federal is the _marginal_ rate. That means you pay 28%
on your next dollar. You don't pay 28% to the federal gov't -- it's
actually about half that, around 14%. That's easy to check -- take your
last year's tax return and divide the tax you paid by your total gross
income. Ditto for the 6% state tax. And unless you're self-employed,
you only pay half the FICA/Medicare.

: >
: >You pay taxes when you earn your money, taxes when you spend your money, taxes for
owning the property you spent your money on, and your heirs will pay taxes on whatever is
left after your gone!!!
: >
: > Only if you leave your heirs over $600,000. Few people do.
: If you have a house, cars, and savings you can easily accumulate over
: $600,000. Let me clue you and Bill Clinton in. A person with $600,000
: in some areas of this country is NOT rich.

1. Middle class people don't live in $600,000 houses, or drive $600,000
cars, or have $600,000 in savings. A lot of them scrape by from paycheck
to paycheck. (In addition, life insurance paid directly to a beneficiary
is not taxable as part of the estate.) Only about 2% of estates are hit
with the estate tax (and then, only the part over $600,000 is taxed).

2. $600,000 is rich anywhere. If you don't believe that, ask a
middle-class worker -- a teacher, a factory worker, a salesperson.

Excuse me? When did the Democrats get a majority in Congress since Clinton was re-elected? Was there an odd-year election that nobody publicized?

C'mon people. It's bad enough that people spout all kinds of crap about laws they don't understand. At least you should know who's in the current Federal government.

After all, according to a vocal minority of our police friends, the news media are experts at getting vital information to the public! :-)

Nope !

1992 Celluar ban passed Congress to where cell freq's are required to be
censored at the 11th hour before Congress ajourned
1993 Klinton sworn in as El Presidente, signes Brady Bill within 100
days.
Still a Democrat controlled House and Senate. House since the early
50's,
Senate since the early 1950's except for 1980 to 1986
1995 Republican Majority sworn in for both Senate and House

I don't want to downplay the potential seriousness of this proposed legislation, but there is a phrase that needs to be pointed out in the above.

"effectively avalailable to a substantial portion of the public" does not appear to cover trunked commercial radio systems or any public safety system or any other non-telephone-like radio system currently classified as "Private Land Mobile".. A "substantial portion of the public" does not routinely have access to commercial or governmental two-way radio systems of any kind.

Oops. I ADMIT, that I was in error about who controlled congress
at that time, HOWEVER, I also point out, that THIRTY THREE PERCENT
of the Republicans in the House, voted for the Brady Gun Bill.

56 Republicans out of 172 in the House. That's THIRTY THREE PERCENT
of the "honorable" Republicans who have stabbed the "party idealists"
in the back. 70 Democrats out of 252 voted AGAINST the Brady Bill.
That's TWENTY EIGHT percent of the Democrats who went stabbed their
"party idealists" in the back. If those 56 Republicans had voted
against the Brady Bill... or even abstained... or not even shown
up for the vote, the Brady Bill wouldn't have even passed...

But, I guess with such political heavies like Senator Bob Dole (R)
being for the Brady Bill, it's no wonder that a third of the party
followed him.

Actually, I think he may be right. I could have sworn that the
103rd congress, the one which came in with Clinton, was a Republican
controlled congress... but looking at the vote on Brady (unfortunately
not available as far as I can find from Thomas) one such organization
shows the figures with the Democrats being in the Majority.

It is very amazing that people like you are willing to roll over and
take it without questioning why ! What happened to this country ?
America was considered a free country at one time but freedom has
been prohibited out of existence. Here in Amerika, you only have
a right to a minimal existence such as "pinching a loaf", watch
Pravda, or I mean, network news. Klinton mentioned a few years back,
"We must find was to limit people's freedom".

Under socialism, we are told that we need to give up our God given
rights to benefit society as a whole. But society is not defined
as the poeple but it is defined as the gov't. It basically means
we give the gov't more power to control us.

> What is truly amazing is your ability to spell.

That tops it off ! Disagree with a pro gov't person
and be accused with an off tangent comment.

Brad

Yep... I admitted my error in another post. Still, 1/3 of the
Republican House voted FOR Brady, and 1/3 of the Democrat House
voted AGAINST Brady. Bob Dole (R) voted FOR Brady. I still stand
by my original statement however, that there is NO DIFFERENCE between
Republican and Demorats in Congress. They both will look out for
themselves to the detriment of their party and/or constituents.

I know how to divide fthe speed of light by frequency to get optimal length (and 1/4 wave) but two questions:

1) The last exchange about length mentioned some compensation for "end effects". Could someone re-explain this?

2) If I were to "coil" a portion of the antenna (like a typical cellphone antenna), does the length of the coiled wire or the length of the coil count against the overall length?

If it matters, I'm optimizing for 154-155 Mhz (~20" 1/4 wave)

||
|| Aside from getting a new monitor, is there anything I can do?
||
||

Ham radio catalogs has an antenna noise cancellation device NIR-?? by
J??(Can't remember their name.) This device has input and output for
your antenna and a short antenna built onto the device which it uses
to detect rf. It then inverts this rf and injects it into your
antenna cable to the radio.
I have seen this device used it does work great.
This same company also makes an audio filter NIR-12 which will remove
the noise from the speaker side.
The first one runs about $169 will the second cost about $300

All services on the PA Turnpike (police, towtrucks, toll gates, and any body else) use the same frerquencies.
Turnpike frequencies are:
159.000 - Talkaround simplex
159.045 - Turnpike repeater output
159.075 - Turnpike repeater output
156.225 - Turnpike repeater input
156.195 - Turnpike repeater input
154.775 - Used to be used as car-car and speed traps. Not sure if it is still used.

For Pittsburgh information try:

The "end effect" makes the antenna appear to be about 5% longer than it
actually is. To compensate, make the antenna 95% of the calculated length.

> 2) If I were to "coil" a portion of the antenna (like a typical cellphone

> antenna), does the length of the coiled wire or the length of the coil

> If it matters, I'm optimizing for 154-155 Mhz (~20" 1/4 wave)

Coils in an antenna are referred to a loading. This adds to the apparent
length
of the antenna allowing for a shorter antenna to be used at a given
frequency.
The amount the effective length of the antenna is increased is determined
by
the inductance induced by the coil. I don't have the formula to calculate
this
handy, but unless antenna length is critical, a unloaded 1/4 wave antenna
for
the 155 Mhz range should not be to long.

Source record: 190791

Tom, I have a question. I have been monitoring the activity on this case for several weeks, now (so it seems) and looked up the court information posted. Ekim was listening to an amateur radio band and was recording the activity on the band with a tape recorder (this is perfectly legal thus far). Then, a signal (cell phone interfers?) bleed over to the ham band and is unintentionally recorded. Later, when Ekim listens to the tape he hears a conversation, not knowing it was a cell phone, because the signal was short and weak. According to what you have been saying, Tom, Ekim broke the law.

Well, I have a young child and I use a baby monitor to "babysit" the child at night. The other evening, the neighbors cordless phone conversation broke in and masked the signal from my transmitter. I was now BREAKING the law because I was LISTENING to my neighbor's phone call. I am guilty of wire-tapping without prior consent of my neighbor. Not only that, but I am guilty of divulging, because now I am telling you about what happened (this is exactly what happened to Ekim...he merely stated that he heard his friends talking on a ham band).

Tom, should I contact the feds and turn myself in? Let me know!

I think everyone else has pretty much said the same thing...Don't bother with Betty Bearcat. She is as old as her BC100 scanner is by now. I have to agree with the others, go with a regional Scanner Master book or search out the web and perhaps join a local scanning club that can provide you more for your $30 than Bearcat will.

If anyone has either the book "The Compendium of American Railroad Radio Frequencies" or "Railroad Radio" or you have any confirmed South Bend (Indiana) and area railroad frequencies will you help and send me some?
Thank you very much.
Mike

Send these to Jerryharker@prodigy.com, and please disregard the first note I put up at 7:11pm

2188. MICHIGAN SCANNER LAW!

Newsgroup: rec.radio.scanner
Date: 1997-07-22 00:00:00 UTC
From: Willy <racine>
Message-ID: <01bc963f$127e3ba0$50ca2581@x>
Source record: 190956

In the state of Michigan, it is LEGAL to carry a SCANNER in your vehicle
and listen to POLICE frequencies IF:

1. You are a peace officer.
2. OR, you hold a PERMIT from the Director of the MSP
3. OR, you are a bona fide amateur radio operator.

This law is Michigan Compiled Law (MCL) Section 750.508.

This is the law under which I was arrested.

I have in front of me a copy of a letter written by the Division Cammander
Communications Division Captain, Mr. Jeff Steffel, dated February 16, 1995,
from the Department of State Police of Michigan.
QUOTE:

"Under Michigan Compiled Law Section 750.508, it is NOT necessary to have a
scanner permit issued by the Michigan Department of State Police to equip a
vehicle to monitor frequencies assigned by the FCC for POLICE purposes IF
you are a bona fide amateur radio operator holding a technician class,
general, advanced, or extra class amateur license issued by the Federal
Communications Commission. In order to excercise the PRIVILEGE of
equipping a vehicle to monitor POLICE frequencies, you MUST have your
Federal license in your POSSESSION."

"If you rely on your license to scan police frequencies, we suggest you
carry this letter with you to show to law enforcement officers as needed."

Sincerely,
signed Jeff Steffel, Captain

I will post the actual law, MCL 750.508 in a separate posting under the
SAME title, for those of you who have had difficulty in obtaining it.

Thank you,
Willy

This is my recent experience with AES:

I was having trouble with my BC300XLT - the charge would only last a couple hours. I went to the AES Milwaukee WI store, explained the problem, and they said I should contact Uniden. Figuring I would have to send the battery pack to Uniden, and needing the scanner, I purchased another battery pack from AES. I then called Uniden, who said they would immediately ship me another one (they already checked the unit a few months back, so they figured it must be the battery pack). I then went back to AES as I did not need the battery pack they sold me if Uniden was going to send me one. I was there only 1 hour earlier and had not removed the battery pack from the box. The clerk listened to what I said Uniden was going to do, then said he'd have to ask the manager if they could give me my money back, He took the battery pack with him. About 10 minutes later, he came out and said I used it because of some marks on the contact points (which he showed me) and could not give me a refund.

Well, either he just made those marks, or, they had sold me a "used" battery pack. In either case, I learned that AES could not be trusted.

2191. MICHIGAN SCANNER LAW!

Newsgroup: rec.radio.scanner
Date: 1997-07-22 00:00:00 UTC
From: WILLY <racine>
Message-ID: <01bc9640$46448420$50ca2581@x>
Source record: 190959

MCL 750.508
VEHICLES EQUIPPED WITH SHORT WAVE LENGTH RADIO RECEIVING SETS

Sec. 508. Any person who shall equip a vehicle with a radio receiving set that will receive signals sent on frequencies assigned by the Federal Communications Commission of the United States of America for police purposes, or use the same in this state unless such vehicle is used or owned by a peace officer or a bona fide amateur radio operator holding a technical class, general, advanced, or extra class amateur license issued by the federal communications commission, without first securing a permit to do so from the director of the department of state police upon application as he or she may prescribe, shall be guilty of a misdemeanor, punishable by imprisonment in the county jail for not more than 1 year, or by a fine of not more than $500.00, or by both fine and imprisonment in the discretion of the court.

(2) This section shall not be construed as restricting the use of radar detectors.

There you have it....if you would like to get a copy of the original law, go to your local law enforcement office and request a copy. They will provide it for you.

Thanks,
Willy

2192. Re: Info on PerCon Spectrum CDROM of Frequencies?

Newsgroup: rec.radio.scanner
Date: 1997-07-22 00:00:00 UTC

Source record: 190960

I've been dealing with PerCon since their product was first announced. The first CD they sent me was defective (it wouldn't work consistently on those blinding 2X drives). When I called to see what the problem might be, they told me that they would send me a new CD, plus a copy of their newly-released Spectrum product and, when the next quarterly update came out, they'd send it gratis as well.

The average scanner user will probably be happy with the inexpensive Spectrum product. You get a lot of bang for your buck. I usually get that plus a SE regional copy at least once a year.

The folks at PerCon are friendly, responsive and put out a decent product at a decent price.

I'm not overwhelmed with their interface, so I usually export the data and manipulate it in Paradox. That's probably because I'm familiar with it and feel more comfortable doing my own thing.

I'd hate to try to tune it while mobile. Lots of small
buttons. I've seen more than a couple of postings over
the years that indicated a reasonably high failure rate.
I'm considering a Becker 2340 Mexico which can probably
be purchased for about $550.

"Rich" <cars@cybercomm.net> wrote:
>
>I'm interested in buying the Trunk Tracker. Is this scanner any
>good at what it does ? Does it have a lot of intermod or birdies,
>like Unidens scanners of the past?
>

Everyone of the 10+ reviews I have read about this new scanner have been very positive. At first, I agreed. Being able to listen to one talk group (i.e., just the Fire Department) and lock out the other talk groups (like Police, DPW) on an 800 MHz trunked system is great. But as I used it in a one week trial, in the same manner I use my other handheld scanners, several negative aspects have emerged.

First of all, the scanner can work in either regular scan mode or to search a trunked system, but not both. While using it in trunked mode, I noticed the unit does not have the range (by several miles) than if I were using it in scan mode (meaning, I could not receive the transmissions). Even in scan mode, I still could not attain the range of my BC3000XLT handheld (I even tried to switch antennas).

Another problem is with volume. In the house, it is fine. Outside, or in a car, the volume is not loud enough. There also is lacking an external speaker jack, so there is no way to increase it. Also missing is the attenuator feature the the BC300XLT has, which allows one to eliminate interference on a given frequency without shutting out the actual transmission on that frequency (this is similar to a squelch, but is used when things like personal computers or automobile computers cause the scanner to stop scanning due unfiltered interference).

Another annoyance with the volume is that when in trunk mode, you cannot use the squelch to see how loud you have the volume turned up. You have to wait until a transmission occurs. So if you had the scanner adjusted for listening outside, then come inside, that next transmission may have you jumping out of your chair (or thrown out of the house by your spouse).

The battery is another story. Of course, it is not compatible with the BC3000XLT, the BC200XLT and other Uniden scanners. It is very difficult to change unless you enjoy cutting your fingers on sharp edges working with microscopic connections on both the charger and the scanner ends.

The keyboard also is a source of headaches. It is located on the bottom with the speaker at the top (some other Uniden handhelds are like this also, but not all). First of all, this makes the unit top heavy. Secondly, the buttons are not even partially recessed, so you are constantly hitting them whenever you grab the unit. Unless you use an unnatural hand

movement, it is even difficult to program with the buttons so low. Its like a calculator (with the keypad extending to the bottom edge). Calculators however, are kept flat on the table when keying. You can forget about trying to hit keys while holding in one hand while driving.

Finally, the concept of trunk tracking has a long way to go. This unit can only track one trunk system at a time and it cannot scan other frequencies at the same time. In large metropolitan areas such as Milwaukee Wisconsin, where there are many trunk systems in use (Milwaukee County, Greenfield/West Allis, Ozaukee County, Summerfest), this does not work very well. The unit should not be called a scanner - you cannot scan except within a trunked system. Also, not all systems can be deciphered by the Tracker. The Ozaukee system is a GE system and cannot be used with the Trunk Tracker scanner.

Until the scanner can scan regular frequencies at the same time as multiple trunked systems, it would be better if the trunk tracker only had the 20 freqs for a trunked system and did not have the regular scanning capability - and the price then reflected the limited capabilities. One could then buy one for each trunked system. And with its current design limitations, it should be in a tabletop form, not a portable.

I have one near mint BC-800XLT in near mint condition to trade. It has the box, manual, nicad pack, charger & leather case. This unit has fullcoverage (no gaps) I am looking for a near mint BC-800XLT base scanner with full coverage in the 800 band as well. . Swaps within the United States only being considered. If interested, please write back detailing your unit & offer. Thanks
Regards,
Ray Miller N2NJK radioman@localnet.com

>
>Or is it PerCoM? Hmm... heh you all know what I mean though. ;)

Actually, it's PerCon. Their web site is at http://www.perconcorp.com.

I have last years Spectrum, and I was a little disappointed. First of
all, I have Windows 95, and the program was written to run in Windows
3.1. No big deal, but it would have been nice to have a Win95
interface.

Second of all, the search engine is actually Microsoft FoxPro. If you
look carefully while the program is loading, the title bar (Where the
name of the program is displayed while running it) says "Microsoft Fox
Pro" for a few seconds before changing to "Spectrum CD-ROM". Again, no
big deal, but I'm not really a Fox Pro fan. That leads me to number 3:
When you perform a search, you must specify ahead of time if you want
to view the results, save them to diak, or print them. If you choose
to view the results, if you want to save or print them, you must
search all over again. This is kind of an inconvenience, but would
have been avoided if a Win95 (or updated Win3.1) interface was used...

What I have done is performed a search for all of the records in Ohio
(where I live) and save them as a .dbf file. I then imported it into
my favorite database program (which I will not name so this doesn't
become a product X vs FoxPro debate...) and I manipulate the
frequencies from there (search, print, etc).

Well Elbert, you sure got that mixed up. Radio Manager is the demo program that is often bundled with the Opto 535. Probe is unrelated to RM (the crippled demo or the fully working version). RM isn't in the same league as Probe for features, or ease of use. In fact, try all of the demos and you'll find out first hand just how poorly crafted they are.

RIGHT ON HOUNDDOG!!!!!!!!!!!!!!!!!!!!!!!!

I LOVE IT! IF THE LEFT IN THIS COUNTRY WERE ALLOWED TO INTERPRET THE CONSTITUION ALONE< WE WOULD BE IN DEEP POOP IN SHORT ORDER>

The questions you have to ask yourself are as follows:
1. Why does the Democratic party fear Constitutional restrictions on government?
2. Why does the Democratic party fear the people being free?
They seem Hell bent on destroying freedom.

From: wt2@prism.gatech.edu
Message-ID: <5r1o7d$cnq@acmez.gatech.edu>
Source record: 190981

Hello,
Still looking for information on the Trunker 3.0. We have gotten ours going, but had to make some hardware mods to the decoder. Trunker3.0 is reversed to Trunker!

One question is why it will decode some systems, and not others? This is further complicated by the fact that Trunker Ver.1 will decode some of those same systems. Yes, we are talking about Motorola (R) type 2, and 2i systems. It seems to have a problem with Type 1 systems also. Have yet to try it on a Type 3. Hee Hee

I have read some people referring to some TRS that do not ID. I admit to not being a Trunking expert, but how would such a system work. Anyone care to explain?

I am also looking for a pre-manufactured device, I remember some folks posted information regarding someone who was making them, and I even spoke to the business on the phone, but lost the info.

If the author reads this, or anyone knows the author, how about posting the source, so others may take a crack at fixing these problems, if you do not have have time to. You did a great job, but a cooperative effort will most likely make greater improvements faster.

There have been a couple of mods to the PD data slicer device. Which versions are you using. Anyone using the old Hamcom version?

Remember, any information is welcome. If I get much response to this I will post the results to the net. Maybe even generate a FAQ.

Thanks, Bill

Apparently this person has no clue as to the operation of a true tunked system. Our preps are programmed for other trunked systems but just like the TT, they can only listen to ONE data stream at a time. It can only do so much at once. Our preps are programmed for trunk, simplex, and other trunked as well as state 800Mhz freqs. It either has to be in ONE "trunk" mode or otherwise.

Moral of this story. Unless the scanner/prep has an "S" tattooed on it's chest it must do one or the other.

As for the volume level. Guess you should check the performance stats before purchase huh? DUH!

I agree with most of you points but i have to disagree with the last

I live in an area that is 95% trunked Motorola and scanning it with a
normal scanner is a nightmare
but it does have very good points
all the public safety is on one system now when it was scattered across
the spectrum before

this is the first model so it will have limitations
especially because of the price

and for 260-300 $ range its not bad at all

I think the Trunktracker is great
and it will get better

anyway just my 2 cents

Jason Webb

Space Shuttle/Mir Radio Coms - Updated 7/11/97

Space shuttle amateur Radio (Sarex) Downlink: 145.550 FM
This is for both voice AND packet modes.

Some amateur radio 2 meter FM repeaters carry live air to
ground coms. Scan the 2 meter band between 144.00 and 148.000
or ask a local ham if they know of any freqs in your area.

On HF (single side band), WA3NAN - the Goddard amateur radio club
transmits the missions on: 3.860
7.185
14.285
14.295
21.390
21.395
28.650

These are dependant on propagation! In N.Y. I pick them up on
the 80 and 40 meter frequencies the best.
They I.D. in morse code and voice. Park on a freq. and listen a while,
coms are not non-stop! There are sometimes long breaks in the action.

Mir 2 meter FM amateur radio have downlinks on 145.800 and 145.985.
These are for both voice AND packet radio. So if you hear short
bursts of noise they are in packet mode.

There is a ground control freq. of 143.625 FM that is sometimes
used as well, but NOT for amateur radio!

Mir is also now on 70 cm with voice downlinks on: 437.950
437.925
Packet downlink: 437.975

Happy listening!

> it worth the extra fifty dollars or so?

Dan,
The PRO-67 is a nice radio at its $200 sale price but I
personally prefer the HS200. It is more sensitive, faster,
has great audio, an S-meter, CTCSS/DCS decoding and a
backlit dislpay and keypad. It is on the large side but
is exceptionally well built.
I just posted a review of the PRO-67 last week and also
have a reivew of the HS200 on my web page below. Follow
the Radio Monitoring link. Page down a few times and you'll
see my list of receivers with most having a dedicated page
and some with reviews.
Happy reading and good luck!

George,
Do you really expect those who engage in these senseless
rantings to understand the logic you are using here? I think
you are just working too hard at all this! ;-)
If I see a posting by Mackey, Eric, M@s@, MAlexder, etc.
it simply goes unread...unless I really want a good laugh at
the childish language and antics they go through.
You know as well as I that when one child calls another
child a naughty name, you HAVE to respond in kind! That's
about the max capacity of their advanced intellects.
To bad it has to clutter up the newsgroup. It's only a
mild distraction to those of us who have been here a while
but a big turn-off to the new users who look here for useful
info but find these jerk-off tantrums instead.

Strong signals,
Rich

Robert,

I will agree with Ken's comments that it is a good bang for the buck. The interface is quite pathetic in my "professional" opinion as a software architect and GUI designer. It is WAY to limiting. The Grove interface for their product is much more flexible for searching and outputting results but you have to pay over three times as much for the entire US. Or simply pick up the one state you need for $40-$50.

Of the several products I have used, I find the FRS database to be THE one of choice. Extremely flexible and user friendly. Try it and you will see. It is shareware and you can get it, as well as the FCC records for your state right off the Internet. Gene and Matt have done a wonderful job with this software. To take a look, try http://www.oz.net/~gmcavoy/Index.html

I buy PerCon so I can have the whole US listing. But I sure don't use their interface. I immediately export the data I want then read it into FRS and/or Probe(for my computer-controlled PRO-2035).

Good luck and happy monitoring!

Strong signals,

2223. FCC ISSUES WARNING ON SCANNER MODS

Newsgroup: rec.radio.scanner
Date: 1997-07-22 00:00:00 UTC
From: stevewfd@aol.com
Message-ID: <19970722131301.JAA16820@ladder02.news.aol.com>
Source record: 190991

FCC ISSUES WARNING ON SCANNER MODS
The FCC is warning companies that offer to modify scanners (this includes many H-Ts with extended receive coverage) in order to receive cellular telephone frequencies that this activity prohibited by federal law and FCC rules. The reminder, issued July 10, noted that scanning receivers must be FCC-certified and incapable of "readily being altered by the user" to pick up the cellular bands. "The modification of scanners on a substantial scale to receive cellular frequencies will be considered to constitute manufacture of such equipment" in violation of federal law and FCC rules, the Public Notice said. "Entities engaged in such activity are cautioned to cease advertising and/or performing any such activity immediately." -- FCC

2224. PROPOSE NEW ENCRYPTION SCHEME

From: stevewfd@aol.com
Message-ID: <19970722131601.JAA16911@ladder02.news.aol.com>
Source record: 190992

SCIENTISTS PROPOSE NEW ENCRYPTION SCHEME
Two scientists at the IBM Almaden Research Center in San Jose, California have developed a new approach to public key cryptography based on mathematical constructs called lattices. The system would be based on a particular set of hidden hyperplanes that constitute the private key and a method of generating points near one of those hyperplanes for the public key. The security of the system rests on the computational difficulty of finding the "unique" shortest line segment (or vector) that connects any two points in a given lattice -- a task that's fairly easy in two or three dimensions, but much more difficult in a 100-dimensional lattice. The researchers are working to turn their theory into a marketable product, and see applications in creating digital signatures and other security and authentication schemes.

Howdy,

It's been a while since I have turned on my trusty Pro-2006 scanner and I remember that there was a way to reset the radio just like it came out of the box.

I'm in the process of moving and can readily place my paws on my owners manual. I know that I need to press the "reset" button in the back, but I also seem to remember that there was a "key sequence" I needed to press on the front while turning on the scanner.

Can anyone be of any assistance on this?

TIA,

Pete

The manual that came with a Toshiba cordless says it operates in the
902.078 - 904.030 (base) and 925.999 - 927.951 (handset) MHz bands.

Does anyone know if a digital signal will break squelch on analog
scanners? Seems like energy is energy.

Try LA Kalifornia. A friend of mine lives in a $400,000 house which
is would go for something like $40,000 in Indpls IN and is
considered a lower middle class area. You have to make a ton
of money to live decently in LA or other parts of CA.

Radio Manager? <G>

For Windows check out Scan*Star Plus! I have it with the Digital Recorder add-in, and use it to run an OS535 & OS456 at the same time. Digital Recorder keeps track of ALL channel info with each stored sound bite and provides a really nice tool for playback. After trying others, I have learned that YOU CANNOT BEAT A RECORDER THAT IS INTEGRATED INTO THE SCANNING PROGRAM, period.

The latest version of Scan*Star has a top-notch point & click interface, uses dBase file format for direct channel importing, pipeline tuning, and does every single feature of Probe, but in a new 32-bit Windows '95 version. I really like the GUI, since I want to SCAN, not fool around with my PC, the same reason that I switched to Lotus Amipro from Word Perfect for word processing. <G> The computer is simply a tool, I prefer one that makes the job easy! It's really well behaved, causing no problems elsewhere in my system.

Probe is a great choice if you want to scan from a dedicated computer, as it will run on older hardware. I don't have the space or the want for yet one more additional machine, and am very happy with how Scan*Star Plus runs in the backround of a shared machine (200 MHz Pentium, 32 MB Ram).

A demo is available @ www.scanstar.com. The demo is time limited, and WILL NOT RECEIVE odd number MHz freqs. It's a pain, but it's better than spending the money based on screen shots. <G>

Barry

P.S. I have no connection whatsoever with Signal Intellegence, or Scan*Star other than as a satisfied customer. I paid full price for my copy. <G>

Barry

2236. Wanted: Standard rubber duckie w/BNC

Newsgroup: rec.radio.scanner
Date: 1997-07-23 00:00:00 UTC
From: jgurley@cdsnet.net
Message-ID: <5r5ak9$59d$1@news.cdsnet.net>
Source record: 190604

I've somehow managed to end up with one less antenna than scanner. I'm disposing of all my older scanners, and I have a Pro-38 that's lost it's rubber duckie...

With all the people buying "new improved" antennas to improve reception, there must be a HUGE graveyard of original antennas...anyone willing to part with one for less than RS wants for a new one?

I'm thinking $5 (plus postage), but I'll entertain a higher price...

Many computer monitors come with snap-on chokes that snap over the monitor signal cable at both ends, near the monitor and near the CPU. Some newer (and older, high end) monitors have these cores built in to the cable. A quick visual inspection of the cable will tell whether or these cores are in place. If they are, there will be a round or sqare bulge at each end of the signal cable. I've had good luck using these cores to reduce RFI from the monitor. Apparently the signal cable will carry a good bit of RF energy. You may also want to try one of these at the connector end of your lead-in coax. You should be able to pick up these cores from your local computer supply for a few dollars each. Radio Shack has them for 4.99 each (part# 273-105). If that doesn't do the trick, consider having the monitor serviced, it may be something as simple as a bad capacitor.

Should you find yourself looking at new monitors anyway, I've found the ViewSonic 17GS to be fairly quiet at an acceptable price.

Good Luck!

-Lance

Can you please specify the EXACT details of the case?

- What were the charges? (Federal, State, Local & citations)
- What is your side of the story?
- Location and agencies involved.
- Other pertinent information.

I'm not going to flame you for not being specific in your first post,
but I am not going to allow your story the credibility it might so
deserve, without these facts.

Is anyone keeping a record of VERIFIED cases of "The police confiscated
my scanner illegaly" reports made here? It might make some heavy duty
ammo to have a listing of verified "stormtrooper" incidents where the
justification is at least in the gray area, if not completely unjustified.

John,

Allow be to clear this up. I DID present my license to the officer, but did not hand it over to him--he saw it! I DID hand it over to them, once the deputy was there. Was I being difficult? Perhaps, maybe I was, however I wanted another officer at the scene for my protection. That is ALL that I wanted. Deputy Lovelace agreed that I was LEGAL and breaking no laws (he knew the law!--the reason I aked for him because he is friends with several amateurs in our town). However, the arresting officer was clueless, and he arrested me to prove his point. Now tell me, what was I arrested for? For being stubborn? No, I was arrested for possession of a radio capable of receiving police in the vehicle, when the law CLEARLY states that I was NOT BREAKING THE LAW! Keep in mind, I was arrested 6 DAYS LATER--plenty of cooling-off time. I guess, when you boil it all down, this was the point I was trying to make. THEY CAME AFTER ME 6 DAYS LATER!

WILLY

It doesn't matter if your self employed or not, you do pay 15.3%
FICA/Medicare extortion, er I mean taxes, you just never see it.

Look at it in a simmilar manor as corporate taxes. The corporation
sends the money in, but in reallity everyone who buys their products
pays the tax.

> 1. Middle class people don't live in $600,000 houses, or drive $600,000
> cars, or have $600,000 in savings. A lot of them scrape by from paycheck

> with the estate tax (and then, only the part over $600,000 is taxed).
>

I'd love to know your definition of "Middle Class" Lloyd. The ave.
price of a house in Hawaii is over $250,000. If a preson has a 401k/IRA
that they have been putting just $1,000 a year into for their entire
adult lives, that compunded at 8% would produce over $500,000. Those
two items alone would push them over the limit. IMNTBHO this is proof
positive that "Middle Class" people can have their hard earned money
conviscated by the government. Using these numbers the Gov't would
benifit to the tune of $82,500 based on a 55% Tax (conviscation) rate.

> 2. $600,000 is rich anywhere. If you don't believe that, ask a
> middle-class worker -- a teacher, a factory worker, a salesperson.

$600,000 is not rich anywhere, ask any middle-class worker -- a teacher,
a factory worker, a salesperson that has a retirement account.

BTW Lloyd the above metioned people IMO are not middle class, there
working class.

Care to rebuttle this Lloyd?

Ed a working class guy.

[snip]

Hey Barry,
Thanks for the info on ScanStar...I guess I'll have to check
into it a little more.
Had a question I am hoping you can answer. In your last paragraph
above you mention not wanting to get an "additional machine". Wouldn't
it be possible to use two COM ports with two windows each running
a version of the control program of choice(ideally you could control as
many machines as you have COM ports on the computer). Granted, you'll
take a performance hit for each additional copy running. And why isn't
this a problem for ScanStar? You make it sound as though you can do
this multi-radio control on one machine with it(as in one copy of
ScanStar controlling multiple radios at the same time).
Thanks in advance and happy monitoring!

Strong signals,

2257. Image Frequency Question

Newsgroup: rec.radio.scanner
Date: 1997-07-23 00:00:00 UTC
From: David Hitchner <asds@xworldnet.att.net>
Message-ID: <01bc97b7$38082b00$ca5a93cf@hal>
Source record: 190625

I have been receiving image frequencies on my PRO-26 in the 1000Mhz+ range. These images are approximately 129 - 130Mhz above that actual frequency. Just out of curiosity, I was wondering why I was getting these images at the 130Mhz offset. I always thought that image frequencies were off by 1 or 2 times the first IF stage. The IF stages on the PRO-26 are as follows:

1st 380.7 or 254.4 Mhz
2nd 58.075 Mhz
3rd 455 Khz

With the given IF stages, there seems to be no correlation between the IF frequencies and the image offset. What gives?

Thanks!

> Communications Commission of the United States of America for police

not to put to fine a point on this...but....
I noticed that they used the wold _will_. This would mean that
the radio is capable of reveiving these frequencies.
Thus (by my reading) any scanner (even those not tuned to police
freqs) is under this law. This would place the radios owned
by Vol. Firefighters under this law .. and since they are not
cops, amateurs or have the love-letter ... are violating this
law.

Plus I noticed Novices don't get much credit under this law..
but don't they have 140 privs?

Just my $.02

If you live in Massachusetts, you can join the localized
mailing lists I've created. Both lists have gray areas around
them, so we do discuss areas outside of the primary regions.

(These lists are meant as regional alternatives to the)
("scan-l" mailing list which is nationwide.)

scan-mass-east

This list covers all of Eastern Mass from West of Worcester
to the East right into the water.

To subscribe to this list, send a message like this:
To: scan-mass-east-request@nomad.n-reading.ma.us
Subject: subscribe
[Message Body] subscribe

The list is available in digested form too. It's address is:
To: scan-mass-east-digest-request@nomad.n-reading.ma.us
Subject: subscribe
[Message Body] subscribe
Digests go out Monday and Thursday mornings.

- -

scan-mass-west

This list covers all of Western Mass from East of Worcester
to the West.

To subscribe to this list, send a message like this:
To: scan-mass-west-request@nomad.n-reading.ma.us
Subject: subscribe
[Message Body] subscribe

The list is available in digested form too. It's address is:
To: scan-mass-west-digest-request@nomad.n-reading.ma.us
Subject: subscribe
[Message Body] subscribe
Digests go out Monday and Thursday mornings.

- -

If you have direct WWW access, you can get on (or off) of the
lists via the simple interface at:
http://www.netspace.org/cgi-bin/lwgate/nest/

http://www.netspace.org/cgi-bin/lwgate/scan-mass-east/
http://www.netspace.org/cgi-bin/lwgate/scan-mass-west/
or for the digested versions:
http://www.netspace.org/cgi-bin/lwgate/nest-digest/
http://www.netspace.org/cgi-bin/lwgate/scan-mass-east-digest/
http://www.netspace.org/cgi-bin/lwgate/scan-mass-west-digest/
depending on which list you're interested in.

Having heard enough rumblings from the direction of the
Capital, I decided that we need a centralized discussion area
for any legal action we wish to take regarding scanning.

So, I created this list (and it's digested counterpart).

To subscribe to this list, send a message like this:
To: scan-legal-request@nomad.n-reading.ma.us
Subject: subscribe
[Message Body] subscribe

The list is available in digested form too. It's address is:
To: scan-legal-digest-request@nomad.n-reading.ma.us
Subject: subscribe
[Message Body] subscribe

Digests go out once a week, Monday mornings.

Tell your friends and spread the word!

Items open for discussion are things like how we can educate
our legislators and the media.

> > used during commercial flights. Since basic web searches, DejaNews, and
> > other searches have failed, where should I be looking?

You'll find freqs for (U.S.) air-ground phones in part 22.

Commercial air-ground systems are the ones that offer telephones to
airline passengers. The ground stations operate between 849.0055 -
850.9973 MHz. The mobiles (airplanes) transmit 45 MHz higher, like
cellular. There are 290 communcations channels (the ones you talk on)
and 60 control channels. The bandwidth of a comm channel is 6 KHz and a
control channel is 3.2 KHz.

The general aviation air-ground systems are usually used by private
aircraft. There are 13 channels spaced 25 KHZ apart. Ground stations
transmit between 454.675 and 454.975. The mobiles (planes) transmsit 5
MHz higher.

>Several scanner web sites have freq. lists for wireless mics but I have
>never seen this freq. listed. The unit also had "channel D" on it. Is this
>a new group of channels? Does anyone know the rest of the channels in this
>group?

Yeah, this is pretty common to have wireless mics on the VHF television freqs. The band starts at 174mHz (beginning of TV channel 7) and goes through 216mHz (top of TV 13). 209.15 is within TV Channel 12 (204-210mHz).

For the mic user, there are advantages and disadvantages. You can get substantial interference if there is a TV station operating in your town on the same frequency. But on the other hand, you can be fairly sure of NO interference if you check the list when you order the mic and make sure that you are well away from any station on that channel. Most dealers will list the mics by frequency and by TV channel.

The D channel designation is probably just something used by that manufacturer only. Also, sometimes the manufacturer will publish a list of which freqs are "compatible" and which ones are likely to interfere with each other by harmonics, etc. if you are using multiple mics at the same location.

Sorry to hear about it. I've ordered product on
two occasions from AES in Las Vegas, both times
within the last ten days. My experience has
been terrific. I would not hesitate to order from
AES again, but your experience doesn't sound
encouraging.

I bought a book from Scanner Master called "National Highway Patrol Reference Guide 4th edition" It has the info you request for each state. Of course they have a disclaimer to check with your local authorities in case of a law change since the book was printed.

Scanmaster number is 1-800-722-6701 and www.scannermaster.com is the WWW site. They sell a number of monitoring books.

In VT and NH scanners are legal.

I tryied to email you an answer but your return address was no good..

I've heard the Radio Shaft techs are susposed to reverse any mods they find
in RS scanners.
If they do it depends on the person I would think.

Reversing a mod could mean replacing a board or processor chip to make
future mods impossible!

Good luck!

No offense intended Frank, but you sure sound like an Orwellian Big Brother type. You scanner folks really confuse me. You claim a right to listen but insist on depriving other persons right to privacy.

Well actually I kinda like your attitude. As a cop I think you and I could work together here. We could develop all sorts of technology and that would allow us to listen in on every facet of peoples lives. I mean if they want privacy they shouldn't be ignorant and should have taken precautions to prevent us from listening in the first place. We could make millions selling this stuff to other cops who want to have access to criminals conversations.

Wow, think of it, we could even run a little extortion and blackmail ring on the side when we catch hubby in the sack with Hazel the next door neighbor.

What was the that about the Bill of Rights? Don't worry, we'll just get good stuff on the judges and blackmail them too.

> traffic on the fox. Happy Scanning.

Actually, the Lake County Sheriff's primary marine dispatch is on 156.210, their F1. 156.850 is a marine band channel (17?) that the Sheriff uses as their "Tac 1." They also have a "Tac 2" that is probably also a marine channel, or as also suggested perhaps an 800 MHz DNR channel.

Also, don't forget 470.5875, the Northwest Lake County Network, which has Fox Lake and surrounding area PD dispatch, and 154.400, the northwest area FD dispatch for all those boating accident/snowmobile through the ice calls.

Safe boating and happy scanning,

IMHO, if EKIM233 had just been another civilian listening to 2 people
that he knew and then talked about it, nothing would have been done.
Unfortunately for him, one of the parties was his boss who had a badge
and a gun and had the power to have him arrested. If the case had
gone to court, the state would not had a leg to stand on (I suspect).
But the boss had EKIM233's job to hold over his head. In the end
there was no criminal penalties, because the state realized that they
were on thin ice. EKIM233 probably did the right thing to accept the
plea bargain because things would have been tough at work from then on
anyways and he did not want to spend the money for a lawyer.

> > asking what validated my arrest. I paid for the attorney.
>
> What DID validate your arrest?
>

Curt, this is my point exactly. WHAT validated my arrest? MAYBE I deserve to be arrested just because I was *difficult*? The officer written down ALL of my information, and PHOTOCOPIED my license. How could a prosecutor issue a warrant for my arrest with the information presented? Well, the warrant for my arrest conveniently stated that I was in possession of a POLICE RADIO. Ahh, haa!!! The catch!! Isn't it amazing what a little switch-a-roo of a word or two can determine ones fate????

People have written me and stated my arrest was due to stupidity. Well, what did I do as a result of stupidity. According to my attorney at the time, asking for a 2nd officer at the scene at 2 AM was a smart thing to do. But, for the sake of arguement, let's say I was being a stubborn ass (which is what one must do from time-to-time to stick up for his rights). WHY IS IT FAIR TO CHARGE SOMEBODY WITH A MISDEMEANOR FOR BEING A STUBBORN ASS?

Besides, this would not have made a difference! Because the officer misread the law and assumed that I needed a PERMIT along with my LICENSE. So whether I kissed his ass or not, I was still guilty in the mind of the officer!

Another question directed toward me was, "Why didn't you sue for damages?" Well, I do not have $30,000 to spend just to prove a point. Especially then, while I was a "poor" college student. The law suit would have just caused me more grief. So, I just chalked the case up as experience, forgave the department, and carried on with my life.

Hi John,
This will only be true if they are using a digital system. Other
than that, any 800MHz-capable scanner can listen in. The talk will
jump around on channels making it harder to follow but that can
be overcome with the new Uniden BC235XLT TrunkTracker.

> So.......is there much good stuff to listen to other than police and
> fire?.....and is it possible to monitor 800 MHZ trunked systems? (without

Have a look at my web page below. Follow the Radio Monitoring link and
poke around some. Near the top of that page is a listing for who uses
the radio spectrum to do their jobs. LOTS of stuff out there to listen
to!

> Also, could someone point me to a FAQ or some other documents that will
> assist a beginner?

I have links or copies of most of the FAQs posted to the scanner groups
on my pages as well.

Happy surfing and feel free to e-mail me if I can assist in helping
you pick your first scanner which will depend on your budget as well
as the agencies you want to listen to and whether you want a handheld,
mobile(car) or base unit.

Strong signals,

Yea, I don't have a problem with this law, though i doubt that many
felons will get a amateur lic. or a state approval.
Lets face it folks, an amateur tech lic. is not hard to get and it makes
you legal in MI.
Futhermore, I don't want everyone running around following cops and fire
depts. and getting in their way.

The U.S. doesn't have a Penal Code, as such. The permanent laws are
codified as the USC - United States Code. This is organized by subject matter
into titles. Title 18 is Crimes and Criminal Procedure.
A few years ago the US Government Printing Office issued the USC on a
CD-ROM. I don't know if it's been updated since then, but it would at least
provide a starting point. Contact a GPO Bookstore in a major city, or call
the Superintendent of Documents at (202) 512-1800.

This law has been on the books for many years in the state of Michigan. It had it's debut during the early years of amateur radio when the police used to use the 1.6 MHz band which was very close to the 160 M band. Thus, the term SHORTWAVE SET.

I hope its been on the books longer than that... "short wave" by FCC
standards, isn't really considered being the VHF or UHF frequencies.
This sounds like it's from the days when police used the 45 mhz
frequencies, and they updated the law to apply to the newer frequencies
while leaving the section title outdated.

> a Democrat majority, with Democrat Majority Leaders?

Im telling you that in 1993, Democrats controlled both houses of
congress and the White House. In those days, they knew time was short,
so they passed many Freedom killing bills as quickly as possible.
In 1994, their time was up. American voters went to the polls and
turned out many many Democrats in Congress. That gave both houses over
the the Republicans, thank Heavens! Since then, the Republicans have
tried to cut taxes and balance the budget, but Uncle Bill had not gone
along with the program. However, if the Republicans had not taken over
Congress in 1994, we certainly would face many many more restrictions on
our freedoms today. Though they are not perfect, the Republicans have
been able to keep clinton in check and they are responsible for the
balance in government that gives investors faith in the future to the
degree that the Dow has recently climbed above 8000 on its way to
10,000!
DOWN WITH THE CLINTON ADMINISTRATION!

6" rubber duck

On the front are two orange buttons marked
"MON" and "OPT" what are they for ?

Also on the front are two LED's marked
"TX" , "OPT" and "mic".
The "TX" and "mic" are obvious, I assume
the "OPT" is somehow related to the
orange button, but how ?

On the top next to the antenna is a rotary
knob marked with the numbers 1-10 with
indents at each number.

Next to that knob is a smaller knob which
seems to feel like an on/off/volume knob.
Is that correct ?

And finally,
What frequency (or range) does it tx/rx on ?

Thanks for any help you can provide.

From: clint.bradford@atdbbs.com
Message-ID: <970723170325254 36@atdbbs.com>
Source record: 190663

My new scanner laws...

1. If, in a messagegroup, you ask blindly, "Are there any mods for my XYZ-123 scanner?" - without specifying what you would like your scanner to do that it doesn't do now - you will be banned from the group for a month.

2. If, in a messagegroup, you ask how to modify your radio to listen in on telephone calls - you will be banned for 90 days.

3. If you post a message indicating that you otherwise illegally use your scanner, you will be castrated.

4. If you post a FOR SALE ad in an inappropriate newsgroup, your modem will be confiscated for, say, a month.

5. If you post any MLM or money-making scheme in ANY scanner-related group - your modem will be confiscated forever.

6. If you post any request for assistance, but use a bogus return address - making it impossible to forward you the information YOU requested - you will be banned from the Internet for life.

Care to add any more???

If they want to protect peoples conversations, they should just go to
digital and scramble the calls. This would be a much more effective way
of foiling the casual listener than hastling us with what bands we can
listen to and what we can't.

Anyone can listen to my calls if they want. I know I'm broadcasting to
anyone who cares to listen and I just don't say anything I don't want
known.

Hy, guys out there. I'm speaking from Madrid (Spain, Europe). I'm on the scanners hobby for quite a long time. In fact, I work in the Air Traffic Control bussines in Madrid / Barajas airport Control Tower, and I have at home a quite comprehensive receiving post, as, strangely, my profession fits extremly well with one of my hobbiesI have found one excelent (and somehow affordable) scanner set for general use. It's the AOR AR3000. Full coverage, excelent sensitivity, all mode, etc. My set covers ALL bands (up to 1+ MGHz) and modes. I don't know if you are able to get one in U.S. with the 'phone cellular band available (I have known about this band restriction there some time ago), but if you resign to use this part of the radio spectrum, and if you are able to afford it (its price tag there should be in the $ 1000 range, may be a little bit less), it is, in my opinion, an excelent purchase.
If you are in the hand held scanner business (or try to be), there are a few good items in the market: the Yupiteru MTV series for all frequencies and modes; the AOR 8000 (I have one) or the gemm for the aircraft bands (Civil & Military): the Yupiteru VT 225. This set works, in particular, extremly well in the Aircraft bands (108.00 - 141.100 MHz , 220.000 - 391.000 MHz, all AM mode). If you want any personal advice, contact me in e-mail e7610410@tsai.es. I'll try to do the best.

Below is some info. I've collected from a couple of web pages about Arlington County, Virginia's frequencies for its Motorola Type IIi system. My basic question is this: how can the BC235XLT be programmed so I will see the below talkgroup codes on my display? I've tried several different combinations (E1P2, etc.). If I need to program my own fleet map, how can I determine the size codes for the different blocks if the fleets look like the list below? Thanks for your ideas on this and please pardon my ignorance.

Arlington County, VA

Frequencies: 856.4375, 856.7625, 856.9375, 857.4375, 857.7625, 857.9375, 858.4375, 858.7625, 858.9375, 859.4375, 859.7625, 859.9375, 860.4375, 860.7625, 860.9375.

> > Any Advice?
>
The McDonald's drive thru's use two frequencies to make their drive-in
ordering
work. The ones in my area use 35.02 for the drive up unit and 154.600 for
the
headset units. McDonalds uses other frequencies as well, almost all of
them in
the low power allocations (two watt max). This works out well for them
since
they only need complete coverage within their restaurant and can usually
run less than 500 milliwatts to do the job.
Since they SHARE these frequencies with other users they can cause problems
and recieve problems with using these frequencies, especially 154.600 and
154.570
and 151.625 since these are frequencies that are usually included in some
of the
low power business radios sold just about everywhere for around $150.
McDonalds drive up's do employ sub audible encoding so they dont have to
listen
to other users of the band.
If you have ever listened to some of these low power frequencies in a good
sized
city with a decent antenna system you would find numerous users from
construction
workers to families keeping contact with their kids to truckers and
caravans.

I imagine that some of them stop and eat at McDonalds...
There are various lists of frequencies used by most of these fast food establishments
in the rec.radio.scanner from time to time. Most of these restaurants custom instal
their systems so actual radio frequencies can vary from store to store.

Hi Pete

To reset your scanner switch it on then 1: press and hold "Clear".
2: using a
pointed object, press and release the
"Reset"
switch. (Use a paper clip)
3: after
confirming the display goes blank,
release
"Clear".

Hope this helps.

Chas :-)

2305. Problem with Ramsey SS-70A descrambler

Newsgroup: rec.radio.scanner
Date: 1997-07-23 00:00:00 UTC
From: ricbel@videotron.ca
Message-ID: <5r3m6qhte1@walton.videotron.net>
Source record: 190715

The scrambled police service I want to listen to is not descrambled "completely", I hear it better then without the descrambler, but it doesn't seem to be tuned exactly for their scrambling. So, is there a way to modified my descrambler to be able to hear what I want to hear correctly? Maybe change a capacitor? But which one and with which value?

Thanks

MikeY,

The frequency was 902.512MHz a Amateur band which I am Licensed to
Transmit and Receive on.
Intentionally-No, Accidentally-Yes, Did I know it was a Cell Phone-No.

As far as proving beyond a reasonable doubt-you know how that works, money
talks and bull_ _ _ _! walks.

There is a group in Wisconsin called the Communciations Research Group that publishes a newsletter called The Repeater. In the last issue, about 150 freqs were listed for the EAA.

The annual cost to subscribe to the newsletter is only $6.

To contact the editor, go to http://www.execpc.com/~swm239

Tell him that you are looking for EAA freqs. He may be nice enough to just send you the listing, but for $6, if you are from Wisconsin or surrounding states, you will find the newsletter fascinating.

PS - if you are unable to browse the web page, you can email him at swm239@aol.com or swn239@execpc.com

>Well Elbert, you sure got that mixed up. Radio Manager is the demo program
>that is often bundled with the Opto 535. Probe is unrelated to RM (the
>crippled demo or the fully working version). RM isn't in the same league
>as Probe for features, or ease of use. In fact, try all of the demos and
>you'll find out first hand just how poorly crafted they are.

Yea...I screwed up with my response...and even posted it twice to
compound my error.

What I meant to say was this: RM (radio manager) the demo/shareware
that comes with the opto board is a good product and does perform as
its advertised. Far better than the other demos that were available
with my board, and for that matter other demos that I tried of all the
commercially available products of this type. Yes in fact many of the
demos are severely limited in their functionality or have limits
placed upon their time of operation, which curtail ones evaluation of
that product. Some in fact may even fail to operate as advertised.

Like you I would say that Probe is the best. I own probe 3.0 and it
works fine. If one had to choose one superior product for computer
aiding scanning software then Probe would be the best. And if you
don't like the dos aspect of probe then I would say go with radio
manager...

My view.....sorry about the duplicate post. I don't care to
debate the issue...just my opinion.

The URL is wrong. Try http:// at the front and see what happens.

BTW, from all I've read about TRUNKER.EXE v3.0, it is not an
improvement - harder to use, won't track certain systems that were
trackable with earlier versions, etc.

In article <5r3cp5$2hf@sjx-ixn4.ix.netcom.com>,
me@home.org wrote:

> If I need to program my own fleet map, how can I determine the size
> codes for the different blocks if the fleets look like the list below?
> Thanks for your ideas on this and please pardon my ignorance.

This is a Type II system. It's easy to program the BC235 to handle this:
Go to trunked programming mode. Select the bank you have the frequencies
for this system in. Press the SRCH key. This will set the default system
type to Type II which is what you want.

The list of talk groups you have below is in Motorola format.
This is a hexidecimal format. The BC235 displays in decimal,
therefore you will need to make a conversion.

If you want to convert the decimal value displayed by the scanner to
its equivalent Motorola talkgroup value, divide the decimal value by
16 and convert the result to a 3 place (leading zeroes may be
required) hexadecimal result. Some examples:

Trunktracker Motorola
---
48 003
496 01F
1040 041
2416 097
11536 2D1
12880 325
65520 FFF

Note that this assumes that the decimal value is an integral
multiple of 16. This should be the case for a Type II group ID. If
you've got a system with lots of even and odd IDs then you probably
need to set your fleet map up as a Type I or Hybrid System.

If you want to go in the other direction and convert the Motorola
hex value to the Trunktracker value, do this: Convert the hex value
to decimal and then multiply the result by 16. Don't add any leading
zeroes here. Some examples:

Motorola Trunktracker
hex dec mult
---
003 = 3 *16 = 48
07D = 125 *16 = 2000
097 = 151 *16 = 2416

AB9 = 2745 *16 = 43920
FFF = 4095 *16 = 65520

****

It happens that there is yet another Motorola variant of talk group
codes for Type II systems. These are most likely known only to folks
programming or administering Motorola systems but I've had some questions
from just such individuals. So here are the formulas for those who want
to know:

Type II talkgroup IDs come in three flavors:

Motorola 3 digit Hex variety such as A07.
ID Range: (000 - FFE)

Motorola 6 digit decimal variety such as 802567.
ID Range: (800000 - 804094)

Uniden format such as 41072.
ID Range: (0 - 65504)

In the following formulas:
M3 represents a Motorola 3 digit Hex format value.
M6 represents a Motorola 6 digit decimal format value.
U represents a Uniden format value.

The notation Dec_to_Hex(X) means convert X to its Hex equivalent.
The notation Hex_to_Dec(X) means convert X to its Decimal equivalent.

========== CONVERSION FORMULAS==========

To convert Use this Formula

M6 to U (M6 - 800000)*16 = U

M6 to M3 Dec_to_Hex(M6 - 800000) = M3

M3 to U Hex_to_Dec(M3)*16 = U

M3 to M6 Hex_to_Dec(M3) + 800000 = M6

U to M3 Dec_to_Hex(U/16) = M3

U to M6 U/16 + 800000 = M6

==========

Examples:

Convert the M6 format ID, 802617 to U format:

(802617 - 800000)*16 = 41872

Convert the M6 format ID, 802617 to M3 format:

Dec_to_Hex(802617 - 800000) => Dec_to_Hex(2617) = A39

Convert the M3 format ID, A39 to U format:

Hex_to_Dec(A39)*16 => 2617*16 = 41872

Convert the M3 format ID, A39 to M6 format:

Hex_to_Dec(A39) + 800000 => 2617 + 800000 = 802617

Convert the U format ID, 41872 to M3 format:

Dec_to_Hex(41872/16) => Dec_to_Hex(2617) = A39

Convert the U format ID, 41872 to M6 format:

41872/16 + 800000 = 802617

****

Here's what a few of the Talk Groups you posted will look like
on the BC235.

Talkgroups: Uniden TT format
33328 - County Sheriff jail "central control"
33616 - County Sheriff 1B "courthouse control"
33648 - County Sheriff 1C
33680 - County Sheriff
1024 - FD 1A Dispatch
2048 - FD 1B
33232 - PD 1A dispatch
33712 - PD 1B "Channel 2"
33744 - PD 1C "Channel 3", "TAC 1",

By the way, some of those Fire Dept Talk Groups IDs look suspect.
Usually a valid Type II Talk Group ID must adhere to the
following rule:

(Talk Group ID - 16)/32 must be an integer.

You'll note that (1024-16)/32 = 31.5 so I'd check into that.

Hope this is helpful.

Greg Knox

Isn't this scanner and the uniden bc3000xlt with cellular illegal for import in the United States? My understanding is that the possession of scanners illegally imported into the United States is a crime. Just Inquiring to make sure no one pays good money to get the scanner confiscated or end up arrested/fined.

Not a silly question, but you are guilty of a silly implication. We
know where the planet Mars is. Do you assume that because we know where
it is, you could drive your car there?

If your cordless phone uses a digital modulation scheme over the RF
circuit, it is fairly secure, save for analog RF harmonics.

2326. FS Yaesu mobile dual-bander FT5200 -- must sell -- see e-mail address at end

Newsgroup: rec.radio.scanner
Date: 1997-07-23 00:00:00 UTC
From: M parker <nothanks2spam@seetext.com>
Message-ID: <33D5A6CC.12E0@seetext.com>
Source record: 190736

Here is the information regarding sale of my Yaesu FT-5200

Selling to pay medical bills after bone marrow transplant:

Yaesu FT-5200 Mobile Dual-Band (2m/70cm) Radio with included
accessories:

Originally purchased radio, s/n 4K 500171, in November of 1995 for
$666.66 (AES is now selling for $599.95)

FRC-4 DTMF Pager Unit (installed): Originally paid $45.00, AES
currently
selling for $29.95.

YSK-1L Remote Separation Kit: Originally paid $65.95, AES currently
sells for $58.95.

BOTTOM LINE:

FT-5200 in mint condition, non-smoker, display still has original
plastic
protection on it, original carton, FRC-4 installed, YSK-1L installed

$480.00 takes all, I'll pay UPS in continental US.

>value?

The Ramsey and many/most other low cost inversion unscramblers use a TV color burst crystal to determine the injection frequency of 3579 cycles. Since this is crystal referenced, you cannot tune it. They will work fine if talking to another of the same unit or another brand on the same frequency.

3000 cycles is a popular injection frequency for public safety inversion scramblers. If you get close your ear can put to back together. If you're not too close you're out of luck.

You need a tunable unscrambler, meaning one that does not use a crystal for the reference. Offhand I do not know of any currently available although I am sure they are. The older Capri units were very nice units but he stopped selling them years ago. There were plans in a number of books amd mag articles for these things, and they should work. The circuitry is not difficult to build and is non critical. Or if you're into playing around, you may be able to build a tunable oscillator or couple a signal generator into one of the crystal locked kits. Or you may be able to buy a board intended to be built inside a two way radio for scrambling/unscrambling, and fool with the injection freq to get it to work in your area. Once you have the right freq you never need to fool with it again (unless the agency you are listening to varies the freq on their end), so it may be worth a bit of effort. You only have to do it once.

I see a lot of people recommending the Ramsey kit. If it works in your area, you're lucky. It is only a coincidence if the signals you want to unscramble also are scrambled using a color burst crystal for the reference. Most are not, in my experience. Of course, if you are buying them in pairs to scramble/unscramble your own signals between two of your own units, they'll work fine.

If you're going to buy a toy unscrambler, make sure the injection frequency is tunable, not fixed.

Hope this helps ..... Steve

I was going to buy a scanner from Durham radio myself and called the firm and asked what happens if it does not make it through customs?

He said durham radio will "guarentee delivery" If this happens send or fax a copy of the letter you got from customs and they will keep sending them untill one gets through, or give you a full refund. He said it happens all the time.

Durham radio is a reputable firm and I feel will stand behind the claim. Call them and ask them yourself. The sad part is the price they charge are outragis look up bandercom he will give the same guarentee and only charge $435 ish for the same unit!

hope this helps someone somewhere :)

> with...it's built-in Big Brother. That is being a

> cop: answering the call of the "you have no secrets
> from me if I meet you today"...eventually.

I'm not sure what your point is here but a person, even before he enters police work, is a highly inquisitive individual, it's a trait we look for. Let's face it, if you aren't curious you can't be a good cop. The average citizen rationalizes things away and I constantly observe that they watch crimes go down right in front of their faces and they don't recognize it. So yes we dig but not in the way you believe or at least in the way I think you are trying to describe.
>
> Cops are nice people, except when you cannot see them.
> You never know who they are getting info on and for

That's right. Part of the whole reason that police exist is to create a fear in the bad guys so that they never know what we are up to. Unfortunately the good guys get paranoid also. Don't know what the answer is.
>
> that is scary.

Could be, but do you have a better idea?

Pretty much true with this unit, however there are some that do
receive starting at about 25Mhz and some high end units starting at
500Khz or lower. Just check the specifications on the units at to the
frequency coverage and you can't go wrong. I know that the Icom units
are capable of the lower frequency scanning, but most cost MUCH more
than the Sport Cat. I wish I had a list of the ones that covered that.
But I am sure there are others that will let you know specific modles.

2357. Another IF Question

Newsgroup: rec.radio.scanner
Date: 1997-07-24 00:00:00 UTC
From: bobbym2362@aol.com
Message-ID: <19970724153101.LAA10826@ladder01.news.aol.com>
Source record: 190517

I work for the National Park Service, and the unit I work with uses two-way radios with a repeater. The output frequency for the repeater is 168.55 MHz. Since I am a supervisor in the unit, I would like to monitor the frequency when I am off-duty. However, I have a very hard time doing so. A very popular amateur radio repeater has an output freq of 146.85 MHz, and its image freq happens to be exactly 168.55 MHz. The ham repeater, which is much more powerful than our repeater, easily overtakes the NPS communications on my scanner. My scanner does not have the option to add PL's, and it jumps up to the 400-band, so that I can not listen to the IF of the NPS repeater. Any suggestions as to what I can do to correct - or at least reduce - this problem?

Thanks you in advance.

Bobby

The technician is not obligated in any way to monkey with your radio.

Techs are mighty damned busy and do not have time to fool with playing around with a radio unnecesarily, especially if there is a chance they may break it costing them even more work.

We service several hundred ICOM receivers a year. We fix whatever is wrong with them and return them to the customer with whatever frequencies were or were not in them when we got them. Although most of our service is for government agencies, the same holds true for privately owned receivers.

There is *no* legal requirement for service facilities to block radios sent for repair, or even if the shop is buying and reselling the radios. We would not, however, accept a radio for service for the express purpose of restoring blocked frequencies.

>all.

Contra Costa Times - November 5, 1988

Scanner owner monitors former cop [crook] on business band radio
(154.6mhz) staking out a restuarant on preparation for a
robbery. Of course, the crooks also had a scanner, but it
didn't help them one bit... in fact, it probably hurt them, as
the scanner monitor wondered why they were interested in avoiding
the real cops.

Contra Costa Times - December 13, 1989

Above cop sentenced to prison for above robbery.

Contra Costa Times - Sometime in 1995

Same cop and his sergeant found guilty of murder during their
1988 crime spree... Not to mention that the sergent's sister
was found guilty a year later of poisoning her husband (not that
the scanner monitor had anything to do with this case)... So, a
scanner monitor assists in getting a dangerous group of criminals
off the street.

It's something called "personal responsibility".

1) Don't expect others to look out for you. You are the best person
around to look out for yourself.

2) If you want privacy in your telephone communications, either use a
wire line, or encrypt your wireless links. Broadcasting an in-the-clear
communication and then expecting privacy, is not being personally
responsible.

You don't see the Secret Service Protection Details broadcasting in
the clear during the times when they expect privacy. You don't see
the military transmitting tactical information in the clear. You
don't see the FBI transmitting confidential information in the clear.

Before you know it... that little clause "readily available" is going
to be interpreted to mean "Unless you were born with a receiver up your
butt, it isn't readily available."

There's been all this hysterical traffic posted on this newsgroup about ham radio op's being arrested for saying the cell word.

Does anyone know what's happening to that highly public news story about the couple that taped Newt Ginrich Cell-phone call in Georgia. The same folks who not only listen and taped but sent the tape off for thier political friends in Wash DC to hear.

If the FCC's not going to go after those folks then it shouldn't going after anyone else.

It is discontinued...and the price will be coming down even further if
you wait longer...its one of the best antenna's RS ever sold...don't
miss out on its cheap price...they will go fast...

2370. Is there a list of scanner laws by state?

Newsgroup: rec.radio.scanner
Date: 1997-07-24 00:00:00 UTC
From: AUNTIESPAM.dstreeter@ameritech.net
Message-ID: <33de8f5c.28975894@news.chicago.il.ameritech.net>
Source record: 190530

Has anyboody put together a list of scanner laws by state?

What I would like to see on such a list is:

-whether there is any restriction (list all states and answer this yes/no)

-whether the state law has a built-in exemption for hams (such as Florida)

-whether there is a way to get a permit for scanner use (such as Minnesota) and how to get it

It would also be nice to include the provinces of Canada, including how Canadian laws deal with an American ham license (and to be fair, how the American laws would treat a foreign (Canadian or otherwise) license).

Does such a list exist? If so, where can I find it?

Thanks.

It's hard to mess up a discone. The Shack version is a little more
delicate than a Sirio. I put one up a couple months ago; so far it
works like a typical one bay vertical omni. We'll see how it likes
the 100 mph+ winds we get here in the winter. For $39 it is probably
worth buying. (I paid $49 for mine-open package.)

2372. My AOR 8000 is a junk pile

Newsgroup: rec.radio.scanner
Date: 1997-07-24 00:00:00 UTC
From: samdunkin@hotmail.com
Message-ID: <869764052.29214@dejanews.com>
Source record: 190532
Cross-posted to: alt.radio.scanner,rec.radio.scanner

Does anyone know what's going on here... My AOR-8000 is
factory new so I assume that there is nothing wrong with
it. I just got it a couple of days ago. I try to tune in
the AM aircraft band ~108-135 Mhz and all I get is VERY STRONG images
from the 88-108 FM band just below. Even with the attenuator on I still
get very strong images from the FM band. In fact if I switch from AM to
wide-band FM, radio stations at 108-135 tune in very well! So reception
on the aircraft band is crowded out. It seems to be a problem all
over the place. I tried to TV channel 6 audio which is always a weak
signal on any other receiver because the station is over 50 miles away.
All I get at the channel 6 frequency is very strong images from the
FM 88-108 band. So there is no way I will ever be able to listen
to channel 6 TV. This also happens in the UHF band. I tune at
1400 Mhz and receive VERY STRONG signals from communications that are
actually at 900Mhz. Can someone with a Yupiteru or an ICOM-R10
please try these tests and let me know. I'm thinking of selling
my AOR-8000 and switching to a different brand. I don't think the
unit is defective because it works well and is very stable when
receiving short wave 40 meter side-band. And also tunes in 2 meters,
220 mhz and police at 471 Mhz fine. It just seems like the design is
kind of cheezy.

NOTE: I am 20 miles from the major city, so I am not being overloaded
with strong signals that are wiping out the AOR. Another receiver here
works fine on the aircraft band.

If anyone has any ideas please post a message or email me at
samdunkin@hotmail.com

I guess that's to be expected... I've done enough set-up post
baits myself, not to respond to a few. ;-)

>> 1) Don't expect others to look out for you. You are the best person
>> around to look out for yourself.
>
>We in law enforcement are in fact going to look out for ourselves and go
>to encryption. Now of course some of the fanatics will complain that we
>are hatching a plot to take over the world, but as you say "look out for
>yourself".

I have no problem with police encrypting their tactical communications,
nor the suposedly confidential returns on plates and ID's run... but I
do think that routine traffic, such as "respond to <blah blah blah>" and
code 666's [*], APB's, BOTL's and the like, don't really need to be
kept confidential, and in fact, may benefit from unsecure transmission.

[*] Regarding unsecure transmissions of code 666's... [a "roadblock"
which in reality consists of police vehicles staking out commonly
traveled routes looking for a suspect vehicle, not stopping and
searchin each individual car] While a crook with a scanner might
become aware that the cops are looking for him, and might even
find out where the lookouts are if the cops don't have predetermined
code 666 locations defined, it will also allow for the unofficial
deputizing of any other vehicle owner out there with a scanner and
a cell phone capable of dialing 911 and reporting the location of
the sought vehicle.

Even the Secret Service protection details, when not actively involved
in their tactical work, may use in-the-clear communications if it does
not compromise their tactical plans. Further, the Air Force One nationwide
VHF/UHF phone patch circuit, while capable of encrypted communications, is
commonly heard in the clear. I don't know WHY... but I assume it's partly
because they realize that the Citizens (their bosses) are curious and
might want to hear _some_ action. [There is (or was) an interesting
page on Glen Robert's WWW site about the circles he went in, trying to
communicate with one person he had overheard on the Air Force One circuit,

asking if she knew her call was in the clear.]

>> 2) If you want privacy in your telephone communications, either use a

>
>You are so right and soon you won't hear a thing from the police either.
>It's a matter of, as you say, "looking out for yourself".

I hope the police don't go fully encrypted. Many police transmissions
have any need to be hidden from the citizens, and the citizens do have
a right [*] to watch their employees in action if it's not going to
compromise any situation.

[*] Maybe "right" isn't exactly the right word, but the citizens
are the taxpayers, and the police, while on duty and using the
two-way circuits paid for by the citizens, are answerable to the
collective of the citizens, and any attempt to "hide it all"
from them might cause some suspicion on the part of some of the
citizens to request a committee to listen to ALL communications
(from log tapes, when their is no longer a tactical advantage
to the privacy concerns) or to request the log tapes under the
FOIA. (Hmmm, that does sound like a good "oversight" idea
anyway... even if they don't encrypt all communications. ;-))

>BTW: Have you ever considered moving out of CO CO county and all them
>oil refineries and moving to God's country in Sonoma?

I'm a good 20 miles from the refineries... The area I live, is similar
in makup to the Sebastopol area... or the Sonoma/Boyes area. The town
of Moraga is nestled in the hills between Oakland and Danville. Three
miles to the south, is Canyon, and miles and miles of nothing but
nature... The freeway is five miles away to the North... and yet,
the city life of San Francisco, Oakland, Berkeley, Walnut Creek, or
Concord, are no more than 30 minutes away... but yes, I've thought about
the North Bay more than once... but my job is down here.

AirFone Frequencies

I managed to pluck this post by gary.sellani@solis.sbay.org, it covers all of the Air to Ground Phone frequencies. If you are planning on intercepting
these, do it from Canada as I'm fairly certain these freqs are covered by the ECPA.

Some people in our hobby find that listening to 800 mhz cellular communications is interesting. Those who do, might find that some real inside, juicy stuff could be found being broadcast from the private jets carrying entertainment industry executives, business leaders, and goverment officials across this great land of ours.

The frequency assignments are as follows:
Channel Ground Plane
1 454.950 459.950
2 454.900 459.900
3 454.850 459.850
4 454.800 459.800
5 454.750 459.750
6 454.700 459.700
7 454.725 459.725
8 454.775 459.775
9 454.825 459.825
10 454.875 459.875
11 454.925 459.925
12 454.975 459.975
CALL 454.675 459.675

The Ground stations broadcast an annoying tone when not in use. The Planes broadcast in simplex only, while the Ground station broadcast duplex similar to cordless phone base/handset operation. The easiest way to monitor this service is to load first a Plane frequency then a Ground

frequency for each channel. After loading all the channels go back and lock out all of the Ground frequencies. Scan the Plane frequencies for simplex transmissions and when you get a hit, press your manual key to jump to the next frequency... the locked out ground frequency broadcasting in duplex!

Sorry to disappoint you, John, but I am NOT the same folk as FRG9600 as
you have stated in your recent post. However, I DO know who FRG9600 is .
. . I know the "man" personally. He is a sniveling gutless little coward
that delights in harassing people on the Net and on the Citizen's Band in
the Northern Utah area; often he engages in this sort of harassment with
his favorite cyberwhore and CB slut Carla. He gets his kicks from posting

people's names and addresses in rec.radio.cb and rec.radio.scanner, but apparently he's wised up a bit lately since he hasn't posted anyone's name or address in either newsgroup for over a week. Whatsa matter, "Mikey," are you afraid that your good buddy WB5RUE will find out who and where you are from just your E-mail address? Just continue to harass me on the Net or on 11 meters, Mikey, and soon everyone on the Net will know who you are and what your QTH is, and they will also know who you darling little mistress Carla is and what her 10-20 is also. What I don't know about you and your cyberwhore/CB slut pal Carla I can easily find out with the information I already have about both of you. Of course, being the gutless coward that you are, always hiding behind a microphone or a PC to harass naive, trusting individuals like myself, I'm sure you will drop out of sight now that I've told you to lay off of me or face the consequences, just like you curled up and died when you thought that WB5RUE could find out who you are and where you're located using just your E-mail address as a guide.

> mail? After all, you'd write in code if you really expected privacy,
> right? And you'd hand-deliver your letter instead of entrusting it to a
> public agency if you really expected privacy, right?

That's exactly right, Lloyd. I never put any confidential information on
the outside of an envelope (I once had an insurance co. put a space for
soc sec no. and phone no. out there--would I have a dime left?), and I
don't write postcards with confidential information. I trust *some* things
on the inside of the envelope because there are Federal laws against any
one else opening the envelope ('Course, you are kinda screwed if it's the
Feds opening yr mail....but that's why we have revolutions, right?) :)
And sometimes, people are just stupid--the other day I saw psychiatric
information concerning a trial on our office fax machine--WHAT were these
people thinking???? I have no business seeing that, and I don't want to--
but the sender was too atupid to consider the effects of their action.

Bill,

You should already have the BPD freqs, here are some others:

Boston Fire

483.1625 PL 118.8 Ch 1
483.1875 PL 118.8 Ch 2
483.2125 PL 118.8 Ch 3
483.2375 PL 118.8 Ch 4
453.6500 PL 131.8 Ch 5 (Station Tone Out)

Boston EMS

462.950 PL 151.4 Tactical 9
462.975 PL 151.4 Citywide 10 (Main Operations)
458.1375 PL 97.4 Simplex 11
460.550 PL 192.8 Tactical 12
458.0625 PL 210.7 Simplex 13
460.525 PL 151.4 Secure 14
453.775 PL 156.7 Channel 16
MED 1 through 8 utilized for Metro Boston C-Med PL 151.4

Notofication Nets

463.550 PL 167.9 Citywide Fire Radio
461.375 PL 203.5 Citywide North
463.850 PL 151.4 Metro Radio System Ch 1
462.725 PL 167.9 Metro Radio System Ch 4

Feel free to e-mail me if you need any of the freqs for the suburbs.
Hope you have a great trip.

Ed Burke
Boston EMS
Operations Division

P.S. The PL for BPD is 118.8, all channels

> around to look out for yourself.

We in law enforcement are in fact going to look out for ourselves and go to encryption. Now of course some of the fanatics will complain that we are hatching a plot to take over the world, but as you say "look out for yourself".

> 2) If you want privacy in your telephone communications, either use a

> don't see the FBI transmitting confidential information in the clear.

You are so right and soon you won't hear a thing from the police either. It's a matter of, as you say, "looking out for yourself".

BTW: Have you ever considered moving out of CO CO county and all them oil refineries and moving to God's country in Sonoma?

>public agency if you really expected privacy, right?

Yes and no... Mostly NO. If you want to use the snail-mail equiv,
then it is like sending a postcard rather than a sealed envelope. I
feel that a better analogy though, is to compare it to posting a
message to someone on a public bulletin board in the town square.
Mainly because the airwaves used, intrude into all areas, public and
private, while the snail-mailed letter, from the moment it is deposited
into a postal box, until it is delivered to the recipient's box, is
in the possesion of a government appointed service who is "suppose"
to guarantee the safe delivery of the letter, while not leaving it in
an unsecure location until it is delivered to the location it is
addressed to.

Middle of Town Square... there is a corkboard where folks post any
sort of messages, from the sale of a car, to labor for hire, to
messages intended for other persons (both private and public).

Suppose you need to send a message to Joe Smoe, and the only way you
know of to contact him, is by posting a message on that board. Do
you post the message on the board, or do you post a different message
telling him to get in touch with you through som other means? Do you
put the message on the board open-faced so that all can read it, or
do you put the message in the envelope, seal the envelope, and write
"ATTN: Joe Smoe" on the outside and post it?... Or do you even take
more secure measures, and inside the sealed envelope, include a fully
encrypted message... not "The" message, but an encrypted message to
Joe telling him to contact you... How secure do you want it?

If you want to be assured privacy on a radio circuit without encrypting
your communication, then you need to alter the nature of the signal
and keep the actual transmitted signal confined only to those areas
where you want it to go. This is next to impossible on a radio circuit,

unless you are using 10 milliwatts to communicate next door, in the center of a 10,000,000 acre test range... and then you still can't even be sure that some sort of ducting isn't taking your signal into areas which you have no control.

Radio Waves exist in nature, and their inherant physical nature is for them to travel anywhere. The Postal Service did not exist in nature, but rather, was created by man AS A SECURE METHOD of message delivery. The "gathering rock"... the public commons... the public square... while it's use not strictly created by nature, has been for centuries... no, longer than that... thousands of years, the idea of a Public Forum for communications, and generally known that it may not be the best way to communicate if you desire complete privacy, or at least not in a language commonly understood in that forum.

Yes, it is discontinued because they came out with a new one that has a 23-30 or something like that MHZ spike on the top of it like the Diamond antennas.

This is a good antenna for scanner usage, I have one about 15' over my house and can pick up anything I need to. It has a good wide freq coverage and it a good deal for 40 bucks.

I queried my congressman months ago on this subject. He said this case was
in the hands of the Justice Dept.; (whose boss works for President Clinton,
by the way.) So..... guess if they'll ever do anything! I'd write
my congressman about this, if concerned about fairness in upholding laws.
You might also point out the proposed anti-scanner laws being discussed and
ask why bother anyway if they aren't going to be enforced.

Ed

As far as I know most "triple 6ers," use that on your police buddies and it will tell them you've been talking to another cop, are SOP in the county protocol. I can't swear that this is the case in Contra Costa but I know it's that way here in Sonoma. So even if a 666 is sent out the bad guy will not know where the roadblocks are because they are just automatically and silently covered by each jurisdiction. The criminal knows were are looking for him so encrypting a 666 call is in fact silly.

I also absolutely agree with openly broadcasting bad guy information. I want every possible resource possible. I just don't want citizens endangering themselves by getting too close or trying to apprehend.

I'm pretty sure that they are very careful not to broadcast any really good stuff, and since the plane is on the move at who knows how many feet, speed and location, I don't think this jeopardizes the Prez too much.

> I hope the police don't go fully encrypted. Many police transmissions

You have made an excellent point. I actually don't mind them watching, as long as they stay out of the way. I would like to see a law passed that would force all police agencies to equip their cars with video and audio, and let the public have access to this resource also. I can't get my city to spring for the cost. I really believe it would cut down on personnel complaint issues and certainly is dynamite evidence.

Actually I like that Idea. In fact I wouldn't have a problem with a one hour delay system wherein the public could still listen to unrestricted traffic other than DMV, DOJ, etc., but only an hour later. This way the information would be of no value to the bad guys and the good guys would be out of harms way.

Tim, Haven't heard from you in awhile, welcome back. Still mistaken
though. How do you figure that analog RF harmonics are less secure than
the primary digitally-encoded analog RF frequency? This has me really
stumped... NOT. Are digital cellphone "harmonics" exploitable? Methinks
not.

> http://www.arrl.org/field/regulations/news/part97/toc.html

Well let's see... I have a copy of of all five volumes of 47 CFR....
parts 0 to End. I subscribe to it and get a new set of books every year
when they are published by the National Archives and Records
Administration... thank you very much.

The last issue published by the NARA was October 1, 1996.

I would suggest that YOU find an UP TO DATE SOURCE of part 97 before you
go capping me for giving out what you THINK is bad info. Part 97.9(a)

no longer requires an operator to have an orininal or photocopy of his license in his possession.

Please read...

97.9(a) "The classes of amateur operator licenses are: Novice, Technician, Technician Plus (until such licenses expire, a Technician class license granted before February 14, 1991 is considered a Technician Plus class license), General, Advanced, and Amateur Extra. A person who has been granted an operator license is authorized to be the control operator of an amateur station with the privleges of the operator class specified on the license."

Don't see anything about originals or photocopies in your possession as of Oct 1, 1996.

I think you have proven than not everything you find on the Internet is true. I have yet to find an UP TO DATE version of part 97 on the web.

Regards

Hello all, After several requests I have posted the entire frequency list for the EAA Convention at Oshkosh compliments of the Communications Research Group. We are a group of folks in the State of Wisconsin that deal with scanning. Please feel free to check out our site for the EAA freqs as well as other aspects of scanning in Wisconsin. The address is:
http://www.execpc.com/~swm239

Enjoy and if you have any additions or changes feel free to drop me a note. Thanks

the frequency for excelsior fire dept. is 154.3850 for dispatch
154.3550 for truck to truck and operations(channel 2) and sometimes uses
151.2500 for incident command

water patrol is 154.7750 and 155.7000

>Thanks,
>GW

Mine came with two antennas, one was a 4 inch +/- L-shaped rod with a right angle bend on one end. The manual says is is for 800 MHz and it is to plug into the upper of the two RCA-type antenna jacks on the back of the unit. Mine seems to work well, I do get good signals on 800 MHz.

If you want to copy it (I would use 1/8" rod or wire) the long leg is 3-9/16" long and the short is 1-1/2" long. That is measured from the end to the centerline of the other leg. Mine also has a nylon bushing to centralize it and provide a little friction but it shoould work just as well without it (except for falling over from time to time).

It goes without saying of course that Mr. Parnass' reply come from someone with extensive knowledge of this radio and may be the true cause of your problem.

And don't forget, CB is either AM or SSB and your scanner would have to be
able to copy this type of signal in this frequency range. Extremely few
scanners copy SSB.

2407. coffee spills, drops, torture

Newsgroup: rec.radio.scanner
Date: 1997-07-24 00:00:00 UTC
From: Al Rooney <n2nkb@worldnet.att.net>
Message-ID: <33D83920.15EA@worldnet.att.net>
Source record: 190567

A work associate suddenly accelerated our rental car yesterday,
and sure enough, 1/2 cup of coffee with milk & sugar spilled
directly onto my PRO-46 hand-held scanner. The sticky goo went into the
speaker grill and into the cracks between the keys and the front
housing.

The good news is that the radio survived the event. I suppose
it was not damaged because all of the buttons are fabricated on one
sheet
of rubber, and the goo never got into the area where the conductive
carbon meets the PC traces.

I am very happy that modern day radios are somewhat robust- this unit
has dropped several times, and the LCD display has never cracked.

My old Yaesu 2M hand-held has also survived through tremendous torture:
drops, heat, ice, rain, UV, VSWR mis-matches & electrical transients.
The plasticizers in the case have dried out, the outer shell is brittle
and cracked, but the unit works just fine.

Have any of you damaged a scanner or HT due to liquid spills & drops?

Al, N2NKB

> to program the scanner.

The serial interface version will only require a 1/8 round hole be
drilled in the chassis to accept a 1/8 in phone plug. PCBs for either
version will be available in a few weeks. Building the circuit on a PCB
will be a piece of cake for most, but I agree with Wiggie that if you
are not comfortable soldering wires into your scanner or dealing with
any problem that may arise, this project is not for you (yet).
Eventually, I will work on some harnesses for popular radios.

I doubt George is impressed.

When I think of "civil disobedience" I think of someone who is engaging in public protesting and is willing to be arrested to prove a point.

Someone who just says they are going to do whatever they want, but won't face the consequences to prove their point is just talking out of their ass.

If you and your wife like to go down on eachother, or if you want to smoke a fattie in your living room with the curtains closed, go ahead, nobody cares. But don't try to make us believe you are a hero for doing it.

I have told you you guys before: My radio taken by USA guys. I buy another radio from canada it did not come. I get fax from canada that radio not allowed in USA. A little later USA guys come to my home they saw me on front porch with old radio. They asked to show them radio. I sure, but they change my dial and listen to lady next door talk to her son about drugs. I never hear before. They say illegal to listen, and took radio. They come back in 3 weeks and took computer. now I go to court I am pissed. I cannot afford aturney as I am new to this country (not illegal). I don't care about radio, just don't want to go to court because of jackass. I am pissed.

> yourself".

The problem is that you are the kind of cop that gives other cops a
bad name. In the above paragraph, you attitude is "us vs. the people"
and that is a very bad attitude for someone in law enforcement, or
politics. Another problem you have is that you feel all rights must be
defind within the Constitution. But no, that is a wrong attitude again.
The Constitution was designed to show where the FEDERAL governments
authority begins and ends. If its not listed in the Constitution, then
its left to the states and the poeple. Because of this, many Federal
government programs are unconstitutional since they are not defined
within the Constitution.
We do not need to define each and every liberty that American
citizens have, but we do need to limit the powers of Federal, State, and
local governments by clearly defining their powers.
The regulation of scanners is not listed in the Constitution,
therefore, it is a state, or local issue. This gives the people more
power to control their local issues and the politicians they have placed
into office.
Stop listening to Bill CLinton and the liberal media. They are all
liers and control freaks.

Well, actually my AOR AR-8000 fell off a car roof on to the 101
freeway in Downtown L.A. at 50 MPH. There was not much left of
it.....However the board was intact and the missing parts and damaged
case were replaced by the service center and it still worked fine!

2420. Pro-2038 Cell Mod?

You could build or purchase an RF filter to block the frequency of the ham repeater or you could use a receiver with a different IF lineup.

I hope you are right, but I don't believe that this is correct. Private trunking systems, public safety trunked and conventional systems can all exist on the same frequencies as do SMRs. Some of these SMRs are regulated under CMRS rules. It is my understanding that the rules that originally allocated certain channel groups to certain categories of licensees in the 800 MHz band are often waived. A new scanner that is blocked to prevent reception of a prohibited commercial service provider would also very likely now be blocked by this law from picking up your local 851-866 MHz police department. Part 90.617 of the rules shows the 800 MHz channels allocated to SMR and public safety.

Remember how Icom blocked the whole 800-900 MHz band from their R7100 receivers? If it's true that only SMR category channels must be blocked, I would be surprised if scanner manufacturers would pick out the individual frequencies that were allocated to CMRS to block. Since the SMR channels are spaced throughout the band, they would probably just block the whole 851-866 segment --and public safety along with it.

With the trend towards interservice sharing of frequencies and frequent spectrum "re-farming," the proposal to block frequencies allocated originally to certain services becomes quite problematic. A few more attempts at this type of law could quickly result in a scanner that only receives aircraft and broadcast band FM.

Message-ID: <19970724054101.BAA06393@ladder02.news.aol.com>
Source record: 190674

Houndog,

Unless the transmissions heard by the samaritans you mentioned were on business band instead of public service frequencies (possible, but not likely), H.R. 1964, Sections 102 and 104 would have no effect on them at all. As proposed, H.R. 1964 would extend the ban on cellular frequencies to all commercial mobile radio service frequencies. In and of itself it will not affect our ability to monitor public safety frequencies.
Also, as proposed, the law does not make monitoring CMRS frequencies illegal. It only bans the manufacture, modification, importation and sale of scanners capable of receiving CMRS frequencies.
Now, I'm not saying that this legislation is not dangerous. It is, and it must be stopped. But if we're to have any credibility with the powers-that-be then we must make certain that any letters, faxes or phone calls contain only pertinent, factual information. Any half-truths or misinformation will only cause your entire message to be ignored.

Grove Scanner Beam Antenna
Used in good condition $39.00 + Shipping

From Groves page:

Get the Best Scanner Antenna Money Can Buy!

ANT 1

Our world-renowned Scanner Beam has been
improved to provide
unexcelled 30-50 MHz low band reception, 108-136
MHz aircraft, 136-174
MHz high band, 225-400 MHz military aircraft and
satellites, 406-512
MHz UHF, and 806-960 MHz microwave mobile.

HAMS NOTE--can be used for transmitting up to 25
watts on 144, 220,
and 420 MHz bands. 50/75 ohms nominal impedance.

May be used with inexpensive TV antenna rotator
for boresight accuracy,
or fixed in one direction as required for those
elusive, distant stations.
Local signals still come in loud and clear from
all directions.

Balun transformer, offset pipe and all mounting
hardware included
(requires TV type F connector on your coax).
Approximate size 8'H x 5'L.

Manufacturer: Grove Enterprises

Grove Price: $59.95

7 894.6055 - 894.7735 .x765-.x797
6 894.8055 - 894.9735
5 895.0055 - 895.1735 Control Channels -
4 895.2055 - 895.3735 .x813-.x973
3 895.4055 - 895.5735
2 895.6055 - 895.7735
1 895.8055 - 895.9735

Transmissions are AM (or AM/SSB), and converting to digital.
Channels are spaced 6 kHz apart. A specific block of 29 channels
is assigned to each geographical area. Ground frequencies are 45
MHz lower and do not echo the airborne half of the conversation.
Service is used on passenger airlines.

Air to Ground Telephone [22.521]

Ch Ground Airborne

Signaling 454.675 (459.675)
6 454.700 459.700
7 454.725 459.725
5 454.750 459.750
8 454.775 459.775
4 454.800 459.800

I like the AOR-1000
it's wide open and receives everything...almost everything...

I have listened to Luke Approach, the UHF frequencies for Albuquerque, and
also Phoenix TRACON.

Source record: 190679

The Spectrum is intended to be usable by everyone. The newcomer can figure out the searches easily, the expert can write his own search engine or import the data to his own program. Personally I import the whole .dbf file into Filemaker Pro and use that since I am more comfortable with it. I also have FoxPro, but prefer Filemaker. Others may prefer other programs, your mileage may vary....

The basic interface supplied is fine for limited searches, and the ability to export to files makes it easy to grab the records you want and open them with other programs.

There are other alternatives out there, most notably Grove, but I have not tried them. I am happy with PerCon and continue to buy each Spectrum that comes out.

For more advanced searches and more info, try a Regional CD from Percon. These are pore expensive and cover less area, but have tons of good info on them, including every field on the license.

Don't off into Fascist Fantasy Land, at least yet. He may (or may not) have bought the scanner before it was illegal to import. In any case, the same identical scanner has been sold in the US for at least a couple of years. A simple bit of reprogramming unlocks the US models. In any case, even if he bought the scanner yesterday from a UK seller, your worry about having the scanner confisicated and being arrested is sheer fantasy (at least today).

Just take the test for the ham license (tech).
I thought it was very easy.
No code required... and it has other benifits (if you buy a radio).
Any way if you want to go to accidents or events (excluding the
odvious) that you hear on the scanner it is still illegal
(infraction?) to go to said scene. (specificly stated in some law I
read somewhere.)
Also there are also laws that deal with using a scanner in illegal
operations.

Basicly if you want to have a scanner in your car that bad just read a book, and then take the test. Wait a couple of weeks and if you pass you will get a pretty little card to carry with you and a cirtificate to put on your wall.

BTW: by the time you hear any police talking (giving away there location), either they will be going somewhere else, or stoping to eat. So don't think it will help while driving.
And becareful with the antenna inside the car, get an external.

A while back I talked to someone in a electronics store, and in the county they are located in the police (at least at that time) were pulling over people with antennas (extra) and checking for valid license, ect... He said that there is a $1000 fine for having a scanner in a vehicle without licensing/permit.
(Possibly: county law + state law = 1000).
Anyway it was a revenue thing there.

Your milage may vary: Things change.
I don't like reading laws.
I also thought the Real Estate exam was easy, so...
It's that calculus thats hard ;)

Be a man, suck it up, learn from you mistakes, and drive on troop! When you ordered the radio, you knew that you were violating federal laws on the importation of a radio that was not type accepeted by the FCC. You knew that there was risk involved. Don't get me wrong!! I'm on your side, and think that the feds should allow any damned type of radio you can pay for. When you put your hand in that box with the snake inside, you kew that you might get bitten. Just as my bud did when he ordered his UBC3000. I'm sorry for your troubles, but don't ask others (other customers of your credit card co., or the vendor) to pay for it. Pay the statement, and order COD next time. BTW, is there a criminal penalty to fret over? Jim

Neal,
I landed at the Philly airport earlier this month and didn't see any signs indicating scanners were illegal. My guess is they would not really care when you pass through a checkpoint on your way out, since you are leaving. And I have never heard of any one checking your luggage upon landing. You might see if any Philly residents see your post and provide details on how agressive they are in enforcement.

the prime idea here is that the issue seems to be
the guy who is a cop vs. those of us who are not.

if you take this to the max, then all cops are for
the one side and all who are not are for the other
because they don't want to be listened in on by
the cops.

a gordian knot kind of debacle....

a radio is a radio...if you want privacy, then have
the makers of those radios put those devices inside
that obligue listeners out...that is the real
issue: the makers have the wherewethal to prevent
others from hearing conversations: so why don't they?

costs money to do and they would have to charge more
and it's easier to buy off a few congress people to
do their work for them and send people to jail for
their crime: not doing what needs to be done.

bill conduit
etc.

when you become a cop you never are the same. You
always want to know more about who you are talking
with...it's built-in Big Brother. That is being a
cop: answering the call of the "you have no secrets
from me if I meet you today"...eventually.

Cops are nice people, except when you cannot see them.
You never know who they are getting info on and for
why?

that is scary.

Volunteer Firefighters and the like can apply for a permit and will be
accepted. I have friends who have done so.

Also, Novices are not included in this law because they are not allowed to
get on 6, 2, and 440. The 220 MHz band is not near any police freqs.

>miss out on its cheap price...they will go fast...
>
Yeah, it may be one of the best RS has sold, but it's still a piece of junk. Why anyone would use a discone for scanning is beyond me. One, it has no gain. Two, your paying for an antenna designed for both receiving and *transmitting.* Three, you have to modify the RS discone by adding an element to the top if your want to monitor low power devices, baby monitors and such. Four, the damn thing was overpriced to begin with.

The Scantenna for $40 is a better buy for scanning. Discjones? I spit on your discjones! My grandmother uses discjones!

Radio Shack's Pro 26 would be no longer cell-receivable by using IF
freqs as I expected in the past (I posted several articles regarding
this in "Pro26 Recall !!"). I was right... If you buy a pro26
"now," you will not be able to receive cells by IF freqs as the 1st,
2nd IF freq set is very high.

I am interested in purchasing a 800 MHZ YAGI antenna.

I need it for a commercial account as a dedicated scanning antenna for
Law Enforcement monitoring via a Uniden BC235XLT Trunktracker.

E-Mail Me With Your Interest!

I can't seem to get it to work. I'm using Real audio 4 with netscape, windows95, and I'm running it on a pentium. I'm getting a message of "Server alert: you cannot receive this content. Either your network bandwith is not fast enough to receive this data or your cpu is not powerful enough to decode it." if you want, check it out at http://199.171.167.7/. I would appreciate any suggestions you might have. THANK YOU

Little Toby Tyler, you are a lying, know-nothing twit who should be whacked across the head with a rubber mallet. What stunt is that, you creep? Was it similar to your own--making phone calls in which you yelled obscentities and such?

I've had an AOL account for longer than you have been on this planet, you cretin. I also have a couple of others that I use strictly for e-mail because I don't want people like you sending me spam touting up your child porn, psychic readings and similar distasteful offerings (although I'm sure that you enjoy them). I would expect a slimeball like you to presume that anyone who uses AOL is not as sauve, urbane or sophisticated as a hill billy like you. It's truely ironic that you would even consider yourself some kind of net elitist. Hah, what a joke!

I also saw that racist joke you posted about Mexicans. I've already forwarded that to your postmaster. We'll see who will be casting around for a new ISP. I give you 24 hours clown boy.

Now run along and don't bother your betters.

Michael Alexander

Hi there. You will find that the drive through frequencies will be in
the low 30Mhz up to the high 40Mhz band as they use very low power, so
you would need to be within 500 meters or so to hear them. Do a search
between these freqs when you are near by and you should find that you get
something there. Good luck.

I know this is not the news group for this kind of forum, and i do apoligize to all of you purists, but in response to your question...

This is in fact a law on the books in what i understand at least 13 states. Oral sex is considered "SODOMY". This law did in fact about 2 years ago put 2 peaple in jail in Texas, actually convicted of "crimes against nature". When the police stormed in, they first viewed the act while looking through a shaded window, for drugs they found the couple who were married engaging in oral sex. I wonder if their attorney asked the jury to raise hands for those who had never engaged in this so called act of "Sodomy". I live in NC where this law is on the books but not enforced.

For the sceptics..no i dont have names or case numbers nor will i engage in anymore discussion on this subject in this newsgroup.

as for the "Denial & Intoxication comment" not quite.

Best regards & good scanning,
RSM

David, David, David, I would ask that if you are going to make a comment
that you base it in fact and not hysteria. Next I would ask that you
read an entire thread so as to be fully informed. I simply used the
Rev's own words. Those thought's were not mine they were his.

I keep telling you David that you know nothing about me and your
constant derogatory remarks about my value system only damages your
case. However I am aware that certain totalitarian governments have
successfully used the tactic of, "if you tell a lie long enough and loud
enough the people will believe it".

> The Constitution was designed to show where the FEDERAL governments
> authority begins and ends. If its not listed in the Constitution, then
> its left to the states and the poeple. Because of this, many Federal
> government programs are unconstitutional since they are not defined
> within the Constitution.

Let me see if I can make any sense of your comments. If you are stating that the Constitution defines the powers of the federal government you are correct. If you are stating that any power not specifically reserved to Congress belongs to the States you are correct. If you are going to mention unconstitutional programs fine. Now, what was your point?

> We do not need to define each and every liberty that American
> citizens have, but we do need to limit the powers of Federal, State, and
> local governments by clearly defining their powers.

Already done David, now tell me how you think that you have a right to eavesdrop on anothers conversation electronically. What ever happened to the right of the people to be secure in their persons, places, and things? If you tell me that the airways are public I am simply going to tell you that it is a place, I am a person, and electronic communication is a thing. Now David who holds the Constitution more sacred, you or me?

> The regulation of scanners is not listed in the Constitution,
> therefore, it is a state, or local issue. This gives the people more
> power to control their local issues and the politicians they have placed
> into office.

Once again David you may or may not be correct. The federal government took control of the scanner industry under the interstate commerce clause of the Constitution, which is a federal power. I admit that this is an arguable point, but that is what the courts are for.

> Stop listening to Bill CLinton and the liberal media. They are all
> liers and control freaks.

David I don't necessarily listen to Bill Clinton or the media, but I certainly am not going to listen to you. You have not demonstrated a clear and insightful understanding of the system in this country. What you have demonstrated is a dogma derived from what others have told you which just so happens to fit your present value system and not knowledge derived from research and study.

David:

You make obvious and blaring errors here:

1. You assume that you are in the majority.

2. You assume the police are against freedom.

3. You assume that your perspective is correct.

I would suggest that you expand your vision and talk to others beyond this group, or your normal circle of friends. You will most likely find that you are not necessarily in the main stream of thought.

Hi
i cant find the manual!!!!!!!!!!!

so i am searching for the copy off the manual to my scanner uniden bearcat bc 100 xlt and also if someone know about any modificatins for it extensed freq range or so..

so if you got any copy off it please help me out and e-mail it to me.

thank you
regards
christer hedman

Although definately NOT the way to do it... there is an interesting plot in Tom Clancy's newest book "Executive Orders". Faced with the rebuilding of the government after most all of both houses of Congress, the Supreme Court, the President's Cabinet, and many top level employees were killed in an assasination attempt, President Ryan chooses to bring in people who will FIX the system rather than politicians... but past politicians want to keep politics in the government and oppose the President.

Interesting situation.

JTWard01 <jtward01@aol.com> wrote:
>Heck, the way things are going, the former cop will serve more time for
>possessing the scanner than for the murder.

Nope. The possesion of a scanner, nor that of a two way radio, during the commission of a crime did not figure into his sentence. Although the scanner was part of the evidence in the trial (somewhat crisp hovever since it was in a fire when in the evidence locker when another former cop, in an unrelated case, burnt down the police station because he wasn't considered for appointment as the chief.) it servered only as circumstantial evidence in the trail.

The gun in the murder was found during the search in the scanner involved case, but it was the only evidence tied to the murder and the DA felt that it was not enough for a conviction. (they really didn't want to have the murder case thrown out of court) Years later, after finally giving two of the four immunity for rolling over on the two former cops, after figuring that they would never get any additional evidence, the prosecuted the two former cops. The ironic thing is, that one of the people granted immunity, the brother of one of the ex-cops, was allegedly the person who fired the fatal bullet.

>I'm not arguing that there can be some very interesting listening on the
>biz band freqs., just that the suggestions put forth were not truely
>applicable.

IMO, this case (the scanner on) would not have been solved to the extent it was without someone hearing information on the scanner. There was much evidence presented in court which originated from tips from the scanner listener, mostly due to the overheard idle chat conducted by the robbers. Some of the evidence might have come forward eventually through some other means, but I am sure not all of it would have, or at least not all linked together like it was. As it was, the first trial was a mistrial due to a split jury... the second trial was stopped short when the defendant plead no contest.

>nobody cares. But don't try to make us believe you are a hero for doing
>it.

Amazing!

In Germany in the 40's, some citizens closed their drapes and offered refuge to people their nation was trying to kill. In the Soviet Union even more recently, people feared doing things in the privacy of their own home which we take for granted. Others certainly were concerned, and the government routinely invaded the homes of those who did these things in the privacy of their homes, where we would _expect_ to be safe.

In the US, in this decade... this last year even, police of the state have concerned themselves with what video a person is watching in the privacy of their own home, and without so much as a warrant, had obtained the tape from the citizen and confiscated it.

If no one plays hero within their home and stands up to the government concerning themselves with our living rooms and bedrooms, then you will definately see more of these cases. Of course, YOU might say that we have nothing to fear if we are doing nothing wrong... I don't agree.

In Concord, the officers respond with "<unit> assuming #<x> position"
which is fairly covert. In Lafayette and Orinda, sheriff units under
contract, it's "<unit> code 6 at <location>" which can clue an intelligent
evader into areas to avoid... although anyone who does any freeway
driving and observes a 666 knows that most all locations are on
the freeway... probably not aware however that the units still cruising
the streets are also on the lookout for the vehicle too.

>The criminal
>knows were are looking for him so encrypting a 666 call is in fact
>silly.

Even with a scanner, it takes brains too, and in their hyped-up
situation, the crook might not even be aware that they are the ones
being talked about... or will assume that every call is about them...
From what I've read, most of the ones the cops may be searching for in
this manner, really are not that intelligent... Heck, even in the
Moraga case I mention in another post... It took those perps (one of
which had cop training) three nights to realize that they were sharing
their frequency with the St. Mary's College Security... which the Moraga
police monitor and talk on too... of course, through the wonders of
PL tones, neither Moraga PD or SMC Public Safety heard the criminal
transmissions.

>I also absolutely agree with openly broadcasting bad guy information. I
>want every possible resource possible. I just don't want citizens
>endangering themselves by getting too close or trying to apprehend.

Good! on the first part... as to your concerns on the scanner chasers,
I have to wonder if it will really keep them away from the scene... All
they have to do, is listen for a siren and follow it... perhaps even
getting in the way of other responding units, and possibly bringing
others in the area who are curious as to what is occuring and can't
"be there" by hearing it on the radio... Speaking of "being there",
I'm sure some sort of concession is going to be made for the Media
Creeps so that they can still keep informed... Is Don Coco still in

this newsgroup? I seem to recall that he handled something like this
with the Oakland Fire Department when they went trunked and nearly
inaccessable to the media types. Some sort of concession was made
where the media types were able to rent similar (non-transmittable)
radios from the radio contractor (MRE?) which would be programmed with
the same programing as the department radios... problem is, where do
you draw the line between Media and Public? Which side do the stringers
fit into? Do you include student media? If not, what about a student
broadcast station which does serve the public outside the campus
community? What about "Berkely Barb" reporters? What makes the Barb
any less media than the Chronicle? Now you're getting the government into
some hairy judgement calls regarding who is and who is not entitled to
First Amendment protections as media, because you can be sure that there
will be some concessions for *some* "media"... and because of that, the
whole "First Amendment and The Media" arguement will be brought out, even
though reception in and of itself, has absolutely nothing to do with the
First Amendment.

The SS doesn't use the VHF/UHF circuits from AF-1... In most cases
they probably use the satellite circuits, as does the President. In
the past, most chat on the VHF/UHF ground link circuit (as written about
in Monitoring Times and on Glen's Page) are by staffers with nothing
that critical to discuss.

I don't know if this has changed since VP Bush ran for office, but
back when Bush was campaigning and pulled a non-campaign stop in
Walnut Creek/Concord at one of the high schools, the VP's campaign
staffers were using the SAME radios as the SS, but without ANY DES
programming (even though programming in a different DES code would
NOT compromise the protection net)... The campaign staff knew that
their communications were in the clear, and knew that they had to
be cautious about what they said lest some negative publicity come
out of some snide comment... As far as tactical information on that
open net, probably the most tactical on that net were cues about which
microphone would be used next in the Q&A session, or whether the volume

was too loud or not loud enough... all of which were relayed to a staffer right behind me, who whispered the cues to me... Still, DES encryption could have been advantageous for that circuit because you could be sure that the staffers on that net really wanted to make comments about some of the questions from the students... comments not meant to be public... comments that could cause lots of political heat in Washington... Remember Ronnie's accidental "Bombing starts in five minutes" comment?

I have no problem with that... except one... As long as the tape remains running all the time, and is inaccessable to the officer, it can protect the citizen as well as the officer... and makes GREAT VIDEO for "COPS" and "Real Stories of the Highway Patrol"...

But, my problem has to do with "evesdropping laws", and that is that citizens need the *right* to have a camera or audio tape running in their vehicle too... Under California law, I do believe that a hidden recorder, even though one of the people party to the conversation knows about it, is illegal... and if a law were passed to make it legal, then you have problems with the creeps who hide a camera in their bedroom closet in order to videotape their conquests. The problem with making the recorder visible, or the citizen announcing that he too is recording the event, is one of prejudices... It might not be though, if such a occurence became the norm rather than not.

I, myself, have judged on the "prejudice" I mention above... and although my judgment was on the mark in the case I am thinking of, it might not have been... I'm thinking of one person who posted to the net that he was illegally stopped and detained for a car registration violation, whereupon he posted an entire transcript of what transpired... As I started reading his transcript, the first words by the citizen were "I'm recording this on this recorder" and I immediately thought "Uh Oh, it's one of those 'the Uniform Commercial Code' governs me, and I don't need a license to drive' type of folks... My call was correct on that, and that is what the guy's post went into as it progressed... and that is where I have a problem... If a citizen desired to keep his own log of a traffic stop, and if he announces that he is recording such a transcript, then he WILL most likely be labeled as one of those types... this *might* be remedied by a simple law "stating" that citizens do have the right to record confrontations with the law, and any announcement

indicating such, shall not be cause for the officer to pre-judge the citizen. (Not that you can legislate prejudices... and an officer MUST make prejudices in a traffic stop... but those prejudices should only cause the officer to become more aware of the situation, and should not dictate his handling of the citizen.)

>> [*] Maybe "right" isn't exactly the right word, but the citizens

>be out of harms way.

Of course, unless the city obtained a second radio channel, or piped it through the CATV system... or onto the Internet, the one hour delay would not be as accessable to the public as it would be over the air. Heck, I can't even locate Moraga municipal codes or the County laws in the Moraga branch of the county library system... about the only current law item they had there, was a year old report of the Grand Jury rulings... and although both county and Moraga are on the net, the information is nothing more than that of a telephone directory. (although the county does publish it's Board of Supes minutes on the net.)

>Ahh, I know right where you are. I was a guest speaker at St. Mary's
>college several times and I've taught at the regional Criminal Justice
>Training Center in your area.

Shit! I may have met you before then... I used to handle audio/visual at the Concord hotel where Los Medanos held much of their certification classes. Worked quite a bit with Diane and Loren. BTW, keeping this on somewhat near on-topic for the NASCAR newsgroup... The Los Medanos "pursuit driving" classes at the airport, can be heard occasionally in the 464 mhz band... 464.5, 464.55, 464.5625 or 464.5875 I believe.

Your mention of St Mary's reminds me of an odd sight there once... Back in 1981, the CA Attorney General held a crime prevention seminar at the college, which was attended by law enforcement from around the state. I was there as the theater technician, operating the lights and sound... with a house full of cops, I hear a drilling noise downstairs and go to investigate, and there was the campus locksmith drilling out the lock of a door to a recently vacated office (where the previous occupant left

no key)... That really took balls, breaking into an office when the
building was full of cops. ;-)

The nature of radio communications does not keep it "secure in their
persons, places, and things", but rather, allows their signal to
enter into my house, or my property, where my scanner is located.

It has been ruled in courts, that if a neighbor has a tree which
grows onto my side of the fence, I may trim and dispose of those
parts of the tree which intrude onto my property, provided I use
care not to damage the remaining portion of the tree.

Forget it. I've tried to talk sense into you before... But
Lloyd "Microwaves are not radio waves" Parker was found to be
a hopeless cause when it came to sense.

If someone has a tooth filling which receives radio waves, then one
need not have to do anything either, in order to receive such
a communication. There, I can be as illogical as you.

I live in central Virginia about 100 mi from Wash DC
and about 120 mi from Norfolk. I am interested in monitoring
the aero freq.s especially from Andrews AFB and the Norfolk NAS.
I live in a restricted subdivision and with the
covenant police (no visible antennas) I am wondering if there
is any type of antenna setup I could use to monitor these
freqs. which would not be outwardly visible. I use longwire s
and a G5RV for my amateur radio setup without any complaints
from the neighbors, but I'm not sure what type of UHF/VHF
antenna I can use. Ican't put up a directional beam outside,
but am considering using a discone up in my attic. Is this a
useless prospect? I don't have any experience with UHF/VHF
antennas except for a 2meter vertical I have in my attic. I can
pick up traffic from Wash DC on 2 meters.
Any help from those with experience would be greatly
appreciated. I monitor aero and military on HF but really would
like to try UHF/VHF . Thanks in advance. Ted

Contra Costa County SO radio recently (last two weeks) underwent a
reconfiguration of their radio circuits. The VHF channels are NOT
using the same assignment which they previously used.

The first big change, is that most of the agencies using the CCSO
VHF dispatch channels, are now repeatered. I have not yet assertained
if the primary frequencies for each net are in the 800, 450 or 155 mhz
band, but it does appear that all of the previous users of the 155 mhz
band circuits, are at least repeated on the VHF band.

I hope to do some additional monitoring, and obtain further information
this weekend.

The following "DESIG" labels the frequencies in accordance with the
OLD bandplan. It is possible that the channel designation is no
longer accurate under the new system.

```
DESIG FREQ LOCATIONS previously
----- ------ -------------------------------- ----------
CCSO1 155.19 Pittsburg (East County) ccso4
CCSO2 155.64
CCSO3 154.94
CCSO4 155.31 Lamorinda/West County ccso1
CCSO5 155.04
? 155.25 Central/South County ccso2
```

```

2496. Re: Need Reedy Creek FL (Disney) TT info

Newsgroup: rec.radio.scanner
Date: 1997-07-25 00:00:00 UTC
From: themik111@aol.com
Message-ID: <19970725202101.QAA27719@ladder02.news.aol.com>
Source record: 190388

Dave,
Just returned from WDW and had all the freqs programmed (The trunk system for park ops and the listed Reedy Creek freqs). I heard a couple of med calls (a cardiac in the magic Kingdom and n employee who had a seizure), but I can't honestly remember if this was heard on the park system or the Reedy system.
I do not have a TT, therefore I couldn't be sure.
I will just say that with a scanner, you never knew so much went on in WDW.
have fun
MJM

>Stay away from the RS counter. If you are on a tighter budget, go for OPTO's
>Cub, but better yet, save up for the Scout. You will not be sorry.
>Have fun,
>Phil

In terms of instant gratification the Scout has a lot going for it. Performance wise the radio shack unit wins every time at detecting weak signals in high noise environments. And it's a fraction of the cost. And it uses disposable batteries. The Opto cub is a fairer comparison, but the R/S unit wins again.

WELCOME TO THE HOBBY!!!!!!!

Many, many years ago, before there were all these computerized FCC Fiche (licensing data) databases around, (I still think PERCON's is the best, but I havent seen Grove's recently improved [and expensive] product), you had to buy microfilm from the FCC, or go blind staring at it in one of their offices. Fox used to publish a series of local scanner books, culled from FCC records and a few reports. As best as my tired brain can remember it, they and the Bearcat club offered a service where they'd print you pages of Public Safety and related records for your county. I ordered them, they were fairly expensive, it came to like ten bucks or something. But boy, it was cool, came printed on heavy yellow card stock in a tiny font.

You guys entering the hobby now don't appreciate the availabilty of the volumes of info that are out there. My local radio club paid over 600 dollars for a full set of FCC fiche data from a commercial source when it first became available on low density floppy discs. (This was long before CD-ROM).

Today, I really, really wish Uniden would do something exciting with it's web page for the club. And I want Uniden to enclose a free one year membership in the club with every scanner it sells. Thirty bucks is a lot of dough to a kid saving for his first radio. They need to put some really sharp people into their staff positions, too. Come on, Uniden, show how you support the hobby!

My advice to all, but especially to beginners, is to get yourself a current copy of "Police Call" from your local Radio Shack or a mail order source. Read the inside front cover to the end of the introduction. Then read the introduction again. Then examine how it's broken down into chapters and sections. Then memorize the abbreviations for the system type codes (at least). Consider all the different ways you can use each each section. Dont neglect the frequency allocation tables toward the back. It's evolved into quite a lot of bang for your research dollar. A current copy of the PC is one of the handiest sources for this information. Then start a notebook.

Next, see if Scanner Master books offers a volume for your state or location. If so, order one. They have all been written by teams of local

sources whose inside info you won't find else where. Next, subscribe to Monitoring Times magazine, from Grove Publishing. While it's about 3/4 shortwave radio oriented it's a great way of staying abreast of the hobby. If you listen to aircraft grab an Airport Facilities Directory and a Sector Chart from a pilots shop, and a an IFR Supplement from NOAA. For Amateur radio info I suggest the ARRL's Pocket Repeater Directory. For other Federal Freq stuff you are pretty much stuck with commercial hobby oriented books, most centered on the greater State of California area, for some reason.

If you want to work right off of the FCC's records you can download them from the FCC. It's tedious and time consuming. The files are huge. I suggest a more practical source is the Percon CD-ROM for any extensive research. The DBF format file on the Percon CD can even be imported into your own database program, if you really want to fill up that old hard drive. MS Access easily attaches it as an external table, so you don't even need to transfer the monster. Or use the handy built-in search program. A regional CD is also available at a higher price which contains all of the information in the license application, including that vitally important "Licensee City" field. Try them out:

http://www.perconcorp.com/db_srch.htm

Uniden sells scanner guide books for 20-30 bucks. They are based almost entirely on the FCC info and are regional. For about the same price you can have the CD, and get the whole country, including about 60,000 US-wide mobile only licenses (Where are those published, Uniden?).

I have only seen maybe a dozen web sites I'd reccomend for freq info, even for local stuff. Ours, however, kicks butt:

http://www.theramp.net/shabec/carma.htm

Join or start a local monitoring club. Subscribe to related E-Mail lists. Read the introductory posts on this newsgroup.

Or just hit that search key and sit back and enjoy.

Happy Scanning

Legal Warning: Yes, I probably have or have had some vested monetary interest in almost everything I suggested. Pay up now.

Have you gone to court yet? What state was this? Can you pay the
ticket or "must you appear?"

Do the police have the authority to make such an arrest?

I can't speak for the Knwd RZ-1, but your comments certainly don't apply to the R100. It is a sweet little performer, and I use it for everything from general scanning to SWLing. That is why it still demands a hefty price. I have been offered $400.00 for mine (non-blocked), but haven't finished enjoying it.

73,

David, WA7ZYQ

P.S. Any other nifty mods that can be done to this little gem?

I picked this up from my friend. You can modify a PRO-60 hnadheld
scanner to pick up cell phone frequencies by removing the lowest
capacitor on the circuit board at the lower right. Hope that helps.

:
: Yes and no... Mostly NO. If you want to use the snail-mail equiv,
: then it is like sending a postcard rather than a sealed envelope. I

Not so. You have to so something to listen to a broadcast message, like you have to do something to read a letter (open the envelope). You don't have to do anything to read a postcard. A postcard is like shouting your message; a letter is like transmitting your message using radio waves.

:
: Radio Waves exist in nature, and their inherant physical nature is
: for them to travel anywhere.

True, but if you capture a signal like HBO that comes into your house and unscramble it, you've broken the law. If you listen in on a cell phone conversation and divulge it, you've broken the law. These cases prove you don't have an unlimited right to everything that comes into your house via radio waves.

: The Postal Service did not exist in
: nature, but rather, was created by man AS A SECURE METHOD of message
: delivery.

Do you think cell phones and mobile radios were made by God? Your argument holds only if you restrict your listening right to natural sources of radio waves, such as the sun or pulsars.

Not a bad antenna, but you need to add a CB type verticle to it to receive low frequencies well. I modified my RS dicone & still wasn't that happy with it. The main thing is it's not very hardy in high winds.

I bought a Sireo (sp) that had the verticle already on it. It is much more strongly built. It seems to do better on low freqs then the modified RS discone.

I'd recommend that you buy a Sireo or Diamond discone (around $90.00).

wrote:
>Yes I had a no access message as well. Don't know why that is, though..

My apologies to everyone having troubles. As far as I know, the main
reason for these problems is the load on Netcom's FTP server; when
there are more than a certain number of people trying to access it
(the whole machine, not just my page) it simply refuses to connect to
anybody else. I don't run the system, and I don't really have any way
to fix that. Sorry, but if you come back at a different time, you
should eventualy get through.

Other than that, I am just guessing at the possible causes. There
have been hints that the problem could be caused by configuration
problems in a firewall machine at your network connection, or
configuration problems in your WWW software, that screw up FTP-mode
access while not affecting HTTP. I don't really believe that theory,
though. Perhaps you could try a different FTP client. (Web by FTP is
a bit of a kludge, anyway.)

If you figure anything out at your end, let me know. Log files
show that people are getting through; at least 30 yesterday.
Including from some @mindspring.com. So, please try again.

2513. Bomb treat on 129.35 (airline company frequency)

Newsgroup: rec.radio.scanner
Date: 1997-07-25 00:00:00 UTC
From: Scott Ryan <crtoy@fyiowa.infi.net>
Message-ID: <33D8E454.20DF@fyiowa.infi.net>
Source record: 190455

Does anyone know which airline uses 129.35 as a company frequency? I have it programmed in my scanner but forgot which airline it is.

The reason I ask is this morning I heard the female Captain report to the company that a strange package was found under the sink in the bathroom. She (the Captain) had the First Officer go and inspect it. The First Officer then got on the frequency & described the package. The Captain then made the decision to treat the package as a possible bomb & requested a bomb specialist over the radio.

Soon after this they either switched frequencies or got out of range.

They also mentioned that a female paasenger had gotten off the plane at LaGuardia to get something she left in the terminal, but failed to re-board.

A VERY interesting thing to listen to. I'm watching the news to see if it's reported to the general media.

If the FCC's not going to go after those folks then it shouldn't going after anyone else.
>
>Nothing happened to them. Nothing will happen to them. Ask John Huang.

This is not correct. They both pleaded no contest and were fined $500.00 each. While this isn't much, it is in line with what other people have been fined around the country for similar FCC violations. The only one who seems to have slipped through the cracks was the congressman who gave copies of the tape to the news media. As far as I know, he was never prosecuted.

It was an unlawful arrest. Duh!
SUE THEM! The powers that be can do anything they want on the scene (they're the ones with the guns) but they are only accountable for their actions, later on, if you make them.

2520. CTCSS decoder

Hi,
does anybody know of some software to decode CTCSS tones from a scanner
??

Reply via e-mail please.

2523. Re: HR1964: Send This To Congress

Newsgroup: rec.radio.scanner
Date: 1997-07-25 00:00:00 UTC
From: jtward01@aol.com
Message-ID: <19970725231400.TAA24675@ladder01.news.aol.com>
Source record: 190465

All,

I may have over-generalized a bit in my original comments. It's true that in some crowded metropolitan areas there are public safety trunked systems licensed on SMR (business trunking) frequencies. In these cases HR1964 would come into play. Fortunately, these aren't too common.
More directly affected will be our ability to monitor volunteer fire departments that are private, non-profit organizations, and ambulance services, some of which are private for-profit, and others that are private non-profit. Many of these organizations are licensed on business band frequencies.
This not-withstanding, I still feel that it's most likely that the majority of instances cited in the original rec.radio.scanner post, "HR1964: Send This To Congress," occurred on public safety frequencies, which would not be directly affected by this bill.
My concern with citing these instances without knowing for certain that they occurred on business band frequencies is that it leaves us open to have our credibility destroyed. It would not take some Congressional aide long to run down that list, determine the frequencies in use by the agencies involved, and then stand before the committee and testify that the new law would have absolutely no effect on the publics' ability to listen to those frequencies. Give them this cheap shot at our credibility and nothing else we say will be taken seriously.

John

Why don't you try a nearby airfield? Most of them here in the States
will sell you an aviation chart at a reasonable price (Around US$
5.00) You may even be able to save some money by begging for an out
of date chart from local pilots. They don't change that much for what
you're trying to do...

Hello scanning friends,
I have a list of Mcdonalds freq for Australian driveins and some are
incorrect. Does anybody here know more about their frequencies??
Thanks, could you reply in E-mail as well as post.

KFC- 156.6
any others were incorrect?

Bryan,
Most of the big cargo planes use the normal VHF air band. I know McGuire approach uses 127.5 and 120.25. These should give you a start.

A very poor analogy. A letter is sealed and not in the hands of
the public. A radio transmission is broadcast in the clear. If
you don't want people to listen, use a regular telephone.

The only reason for this stupid proposal, is that our esteemed
Congresscriters don't want others to listen in to them. It's
as simple as that.

>Can anyone tell me about this scanner and how this compares with the
>Uniden 3000XLT.
>

The 2500 has the following that the 3000 does not have...

* Hit counter...counts how many times a transmission was received on a particular frequency.

* VFO knob...gives the user the ability to tune up or down in frequency.

* Early models can be modified for cellular reception

* Global delay...delay is enabled on all channels, not individually

* Case is standard.

The 3000 has the following that the 2500 doesn't have...

* Selectable delay on a per channel basis

* Attentuator switch on a per channel basis

* Cellular can not be enabled on any unit made for the US. (3000 models made for the UK can receive cellular)

* Selectable modes (AM, FM, WFM) (Some 3000's cannot be enabled into the AM mode in the 800 Mhz region.)

* Battery saver

* Frequency lockout in search mode.

* Data skip...skips over paging signals, for example. MDT's and trunking signals aren't too effective with this function

* Turbo mode when searching in 5 khz steps

General info...early 2500 models were plagued with intermod and image problems, especially in the 800 & 900 Mhz region. Not too sure about later models. 3000 models handle intermod and image problems alot better than the 2500. The case for the 3000 must be purchased separately.

The 3000 has plenty of undocumented features not in the manual. These include...

* Light on continuously or timed.

* Selectable 2 or 4 second delay on all channels when delay is
enabled on a channel

* Autosort enabled or disabled

* Scan up or down. Effective for Motorola trunked monitoring when
autosort is disabled

I used a CB radio bottom loaded mast, which I mounted to the center stud
of the RS Discone. I can't remember exactly how I mounted it. Used
some kind of treaded coupler from the hardware store I think.

Eric,
I don't spam people, nor am I in the habit of harassing people on the Net or on 11 meters as FRG9600 is. Normally I wouldn't even post this sort of information in rec.radio.scanner, since what I know about FRG9600 has little or nothing to do with the scanning hobby. However, since FRG9600 likes to get his kicks from publishing people's addresses and phone numbers in rec.radio.scanner and rec.radio.cb, I thought the members of these newsgroups would be interested in knowing just who FRG9600 is so he can be stopped from harassing me and other members of the aforementioned newsgroups. This creep has already had one ISP account terminated for forging posts through Usenet, so it's easy to see that he's the type of gutless wonder who loves to hide from those he torments!

John,
I am going to report FRG9600's violations of his AOL Terms of Service
```

agreement very soon if he does not comply with my request to remove the Web page which I created (and he plagerized) from his alias FTP site within 24 hours of receiving notice of his infraction via E-mail. I am giving the coward the opportunity to demonstrate that he is intelligent enough to stop harassing me on the Net before I resort to reporting his TOS violations to our local AOL customer service office. The problem with this gutless wonder is that he goes into hiding whenever he thinks someone might actually discover who he is and what his QTH is. In the 10 months that I have known "FRG9600," he has changed his E-mail address almost a dozen times, and his physical address has changed at least twice in the past three months. Since he is constantly on the move, he is somewhat difficult to track. But there is always a way to locate someone who likes to stir up trouble on the Net and on 11 meters, and FRG9600's anonymity may soon end, at least as far as AOL is concerned. This creep has already had one ISP account terminated for forging posts through Usenet, so it's easy to see that he's the type of spineless wimp who loves to hide from those he torments!

Also, check out my web site - MATS - Metro Atlanta Trunking Systems

I have the 800 freqs and trunking codes (if you have a TT235).

With the exception of MARTA (transit) and GSP (Georgia State Patrol),
98.5% of ALL public safety in the Metro Atlanta area is on 800 Mhz.

Thanks to some new software, the ONLY (that I know of) web site
dedicated to the Metro Atlanta Trunking Systems is now up and working
at 100%.

If you would like your trunking related web site listed on my site and
mine on yours, please drop me a e-mail at mm505@mindspring.com

ATTENTION ROCKDALE & WALTON COUNTY and COVINGTON:

I need your help in getting your codes to update on my site.

Like Tom Jones said, need some more info. Is your software configured
for the correct port? Is your cable plugged into the correct port? Do
you have several radios "daisey-chained"? If so they all need to be
turned on in some cases. Have the "DIP" switches on the OS456 board been
checked?
Failing all the above, give me an Email with some info and I will try to
help you.

What do you mean by "real modification"? If you want to modify it to
receive cellular then you're out of luck but there are probably many
"real" modifications that can be made to it.

2579. PRO-60 MOD! Increase memory to 400 channels.

Newsgroup: rec.radio.scanner
Date: 1997-07-26 00:00:00 UTC
From: Bryan <ks4hr@injersey.com>
Message-ID: <5rdmg7osq1@news.injersey.com>
Source record: 190268
Cross-posted to: rec.radio.scanner,alt.radio.scanner

Hello fellow readers of rec.radio.scanner and alt.radio.scanner, Ira Pro43@aol.com has a mod for the PRO-60 to add another 200 channels to the scanner.

It requires "piggybacking" 2 more memory chips on the orignal two and making a few cuts and jumps on the circuit board and adding a switch to select between the orignal 200 or the new 200 channels. You will only be able to scan 200 channels at a time!

!!!!! DISCLAIMER !!!!!

This MOD is NOT for those afraid of soldering surface mount devices in a tight area!
WE will not be responsible for the destruction of your scanner!
This mod, like ALL mods will VOID the warranty, don't expect Radio Shack to fix it for FREE if you butcher it!

The serial EEPROM memory chips are available from a few sources part number 93LC66.

Here are Digi-Key part numbers for the mod

93LC66 EEPROM .86 each Digi-key # 93LC66/SN-ND
Small DPDT switch .92 " " #EG1908-ND
100K resistor network .25 " " #Q5104-ND

The best wire for the mod would be 30 ga wirewrap type. Digi-Key has precut bundles for about 4 to 5 bucks for 50 peices 6" long # Y6-ND. Radio Shack also sells this item.

Since binaries are not wanted in the newsgroup contact Ira Pro43@aol.com or me for a drawing of the mod.

I have NOT preformed the mod yet so contact Ira for technical details.

My experience with AES has always been good. They seem to be one of very few stores that care if you are happy with the equipment you receive and with your purchase in general. I was unhappy with an Icom IC-T7A, had a slight problem with the scan feature, and they agreed to give me full credit on an IC-W32A.

When you order something they will tell you if it is in stock, and ship it that or the next day. I usually get two day service from Milwaukee to Nebraska. If its not in stock at one store they will check their other stores, on computer, and ship it from there. I have delt with several salesmen from different stores and they all seem to be friendly and helpful. The only store I have walked into is the Las Vegas store, and everyone was friendly and helpfull.

>is any type of antenna setup I could use to monitor these
>freqs. which would not be outwardly visible.

There is an outfit that advertises in 73 Amateur Radio magazine, (and possibly others,) that has a roof vent antenna. A 3" pipe like thing that functions as a 2M quarter wave antenna, slips over a standard roof vent pipe sticking out of your roof, and just looks like the roof vent is a little taller than normal. I couldn't find this company in my August QST magazine so can't give you a phone number.

OR, you could build your own. Buy an 18" piece of conductive pipe big enough to slip over a roof vent and capable of being disquised as such with paint perhaps. Insulate it maybe with electrical tape so it doesn't make contact with the roof vent.... (not a problem if the vent pipe is PVC or another non conductor.) Sneak a coax to it. Fasten centerconductor to bottom of your new pipe. Braid could go to the metal flashing around bottom of roof vent at roof. This antenna should be fairly broadbanded due to its diameter and should work well as a 1/4 wave antenna on VHF and as a 3/4 wave on UHF.

Good luck.

Ed

Thanks! I will check into a CB antenna, or as previously mentioned, a GM
replacement mast. One other question: What would be the optimum length
for the element to pick up 30-50 MHz? I guess you can tell that i'm not a
whiz on radio, but i just love monitoring and CB as a hobby. Sorry if
these questions are elementary to those of you "in the know". As always,
any help is much appreciated!

Thanks-Christopher
thanks again

I agree with many of your observations about the TT, although I don't know if any of the shortcomings as so serious that they negate the value of being able to do ANY trunk tracking. Like the old saying goes, "It ain't that a dog can dance well on its hind legs, it's that a dog can dance at all."

I do have to point out, however, that the TT I have in my hand right now has an earphone jack on the top, right between the antenna and squelch control.

G'day from South Australia

Does anyone know if Tandy/Radio Shack will release this year a scanner with
Alpha Tags to identify memories? Something like the Uniden BC-9000.

I want to thank each person who write me and bless everyone for helping. I get many many letters that explain law to me and help. Some not nice, but I understand law of free speak. I cannot give too many details, but whole thing happended June 12 1997. On that same day I am really pissed.
I spoken to my lawyer and he is on my side too. He said that the radio is an important aspect of free speak. USA guys are not allowed to take my radio from my home. I did nothing wrong. I only want to listen to music, not next door lady like USA guys say. I am pissed.

I give some important details on my case:

May 18 I order new AR8000 radio from Canada
May 22 I get fax on machine saying Radio will not come
May 24 I call company ask why my radio not come
May 24 I am pissed.
June 2 I am sitting on front porch with wife listening to another radio
June 2 USA guys show up with Helcopters and tanks.
June 2 USA storm troopers throw tear gas into house
June 2 They shout "come out" come out", but we are already out, sitting on front porch.
June 2 They ask for photo ID, I cannot give them because house burnt down.
June 2 I am pissed.
June 28 I get lawyer who helps me.
June 29, 30 I am pissed.
July 1-31 I am pissed.

2600. FM Broadcast Band on PRO-32 (or TH-225)?

Newsgroup: rec.radio.scanner

From: David Andreatta <dandreat@turbonet.com>
Message-ID: <33DAB802.DAA@turbonet.com>
Source record: 190289

Greetings;

I'm looking for a mod or hack (unusual keypad entry sequence) to receive FM broadcast band frequencies on my PRO-32 scanner or Kenwood TH-225A. I'll have the scanner, with an occasional need to monitor a commercial simulcast, and I don't want to "drag along" an extra radio. I've tried all the "common" scanner + ham mod sites, to no avail. Thanks in advance.

This sniveling little coward gets his kicks from publishing people's addresses and phone numbers in rec.radio.cb and rec.radio.scanner--look up his posts in Dejanews if you have any doubts. However, he's been quiet for the past couple of weeks, maybe because he has gone into hiding (as he usually does when he thinks someone may actually find out who he is). The last time he was heard from was on 13 July when he published WB5RUE's address and phone number. What FRG9600 doesn't realize is that soon he may be exposed for his cowardly antics of harassing people on the Net if he doesn't remove a Web page which I created, a Web page which is protected by U.S. copyright laws, from his "alias" FTP site. This guy has been in trouble with at least one ISP for sending forged posts through Usenet, so it's easy to tell that he's a gutless wonder who likes to stir up trouble and then hide from those he torments!

You'll be able to get the air side of the comms with just about
anything short of a coat hanger.

The tower side, however, will be a bit tougher. Probably the biggest
factor is how obstructed your line-of-sight is to the towers in
question. If you have no near-by obstructions, you May be able to
pull in the tower with a beam in your attic. I doubt a discone would
do it at that range.

Mark

The truth as I perceive it to be.
Your perception may be different.

Sorry to disappoint you, Eric, but I am NOT the same folk as FRG9600. If you had read my post regarding FRG9600@aol.com, you would know that FRG9600 and BC800XLT@aol.com are not one in the same person. However, I DO know who FRG9600 is-- I know him personally, and he is going to be in a lot of trouble with me soon if he does not stop harassing me on the Net and on 11 meters. FRG9600 has downloaded a Web page I created, a Web page which is protected by U.S. copyright laws, and uploaded this page at an "alias" FTP site of his. Despite the fact that I have asked him to remove the Web page from his FTP site, he has not, so I'd say that makes him guilty of plagerism!!
No, Eric Oyen, FRG9600 and BC800XLT are NOT one in the same person. However, if "Mr. FRG9600" does not comply with my request to remove my Web page from his FTP site PERMANENTLY, I have some information regarding FRG9600's activities on the Net which may be very useful to you, Mr. Eric J. Oyen!!

2616. Re: Radio Shack discone antenna on clearance

Newsgroup: rec.radio.scanner
Date: 1997-07-26 00:00:00 UTC
From: Mark Bryant <bryant@sohobusiness.com>
Message-ID: <01bc99c2$83888a40$6ca745cf@nimitz>
Source record: 190494

I found that buying a GM replacement mast for car radio (about 6 bucks) and tapping to the thread on top of the discone is the easiest way. Takes about 5 minutes and would only require a tap and drill bit if you don't already have them.

Good luck

Mark

Cross-posted to: alt.radio.scanner.uk,alt.radio.scanner,rec.radio.scanner

Hi,
This may be off topic (but it is radio related).
I have recently aquired (2nd hand) a set of Motorola S100 Short range
buisness radios.
These sets are handhelds and work on the 461 MHz SRBR freqs using CTCSS
tones. Front colour of them is green with "Handie-Com" written on them.
I am looking for a manual or at least a list of how to use the features
on the set as the only paper that came with these were how to change
freq/tone.
There are a few options reached via button presses i dont know what they
mean and would like to find out.
If anyone knows where i might obtain information please let me know (I
have tried Motorola web page but no joy)

2623. Radio VIRUS

Newsgroup: rec.radio.scanner
Date: 1997-07-27 00:00:00 UTC
From: Troller <s1046@somanet.com>
Message-ID: <5rep5k$nv4$1@news1.uswest.net>
Source record: 190301
Cross-posted to: rec.radio.scanner,alt.radio.scanner

Well, it finally happened. I contacted the vendor of TigerScan-V as to why my ar8000 erases data during scan mode. It erased every frequency that it stopped on. They confirmed that there are over 7 known AR8000 viruses. Their fix is a software fixer that must be uploaded to "clean" the eprom. *some* viuses stop upload altogether. The only solution is to replace the chip.
There are no virus programs that find and kill this virus as it only acts on radios.
My virus was called the EnLant.
I have succesfully restored my radio to its pristeen state, but what a scare. I wonder if there is a site devoted to radio viruses?

Also this virus does not confine itself to any particular radio!

actually, ANY receiver can become a transmitter with two or three
changes, and without addiing any parts from radio shack.....the RF amp
will be the AF amp, and it isnt very efficient, but it can be done,
and makes a grea emergency locator beacon....

Source record: 190306

I'm thinking of buying an SC150, but the Uniden WEB page doesn't tell what freq.'s it covers... Just that it covers 12 bands... Kinda vague if I do say so myself...I wonder if it reflects their customer support?

But anyway, can someone please tell me what frequencys this model covers?

Also, I have the opportunity to buy either the SC150 or the Radio-Shack PRO-60 for the same price... Which one should I get? As far as I know, the PRO-60 covers everything from 30-512 and 760-1000MHz...

STANDARD PLUTOPIA CONTRACT

Between _____ and THE GOVERNMENT OF PLUTOPIA

WHEREAS: I wish to reside on the Planet Plutopia and help myself
to Laws I pick and choose.

WHEREAS: The Planet Plutopia controls the asteriods on
which I outght to reside and; WHEREAS: Tacit and implied contracts,
including the Constitution of Plutopia, are vague to me and my kind
and therefore unenforceable, especially when we are caught commiting
felonies;

THEREFORE, I, THE SIGNER BELOW, agree to the following terms:

SECTION ONE. I will surrender a percentage of my Brain to the
Plutopian Cult, such percentage to be determined by the Plutopian Cult and
subject to change at any time at Cult discretion. The amount to
be surrendered may be based on my income, my net worth,
the number of brain injuries I have incurred from drunken government
bashing, or any other criteria the Plutopian Cult may get pissed off about.
To aid the Government in determining the percentage, I will apply for an
Intelligence Quotient Number which I will display in all conversations.

SECTION TWO. Upon The Plutopians demand, I will surrender common sense for a
period of time to be determined by Burger World, typically no less
than two days a week. During that time I will serve burgers in any
way it chooses, including french fries, in which case I may be called
upon to sacrifice my reputation.

SECTION THREE. I will not limit my lewd behavior when and as demanded by the
Government, including but not limited to the following: I waste acollossal
amount
of time worrying whether I am allowed to consume only those drugs permitted
by
the Home Planet. I will limit my sexual activities to those permitted by
the Local Cable Television company; I will forsake time with my
grandchildren while I worry about religious beliefs which conflict with
everyone.

SECTION FOUR. In consideration of the above, the Home Planet will:

A. Permit me to seek Brain surgery, subject to any sexual experiments which
might be
determined by the Home Planet, such as choice of vegitables I may accept
into my body.

B. Permit me to resize North America which I control because they screwed up

C. Permit me to take speed freely, subject to speed limits to be determined from
time to time by the High Plutonian or his authorized sales representatives, the
Congress and/or the Supreme Court whom I know little about.

D. Attempt in good faith to protect my butt and my misguided claims to any
property it may have allowed me to take a crap on. [Note: I may not, however,
hold Cindy Crawford's tush at a party, or in an elevator. The
fact that the School System may have denied me the second grade,
places no pressure whatsoever upon my family for any embarrasment
they may suffer as a result.]

SECTION FIVE: The Plutopian planet may offer various mental health
services to me, the extremety of which shall be determined by
Yo-Yo testing and I may be subject to diaper change at any time,
and I may be charged at by therapists.

SECTION SIX: The Plutopians will determine the weather, and when there is weather,
I may shop for curtains, and practice the inflections in my voice. The
inflection of my voice will normally vary inversely with the total
number of alcoholic drinks, and I understand it typically will be of little or
no consequence. I agree not to hold any elected Government official.
I am liable to act against my best interest, and to upholster boats.
-Even if constipation motivated me to vote for "Eight Heads in a Basket".

SECTION SEVEN: I agree that the Planet of Plutopia may hold me fully accountable
if I fail to get my own Militia. In the event of such failure on my part,
the Plutionian Government may get on with solving real-world issues,
and may impersonate me for a period of time to be determined by the Sit-coms.
I also fear that the Plutonian Government may alter the terms of
this contract at any stage of my alzheimers, with or without my knowledge and assent..
or both or one or the other...

SECTION EIGHT: I agree to be a hermit and let the doctors determine the
specifications of my brainwaves, and let "voices" coming from
scanning receivers tell me what I can monitor and what I can't,
knowing full well I hear messages that the Government is always out
to help me monitor cell phone calls.

2633. TV Antennas for Scanners? Hell yes!

Newsgroup: rec.radio.scanner
Date: 1997-07-27 00:00:00 UTC

TV Antennas for Scanners?

There is some controversy over the use of TV directional antennas for scanners and scanning. This article lays out the facts and the substance of the issue so folks can see, calculate, and decide for themselves.

So why would you choose a TV antenna for your scanning post? To hear all there is to hear, for one thing. The GAIN of the antenna alone will enable you to hear far beyond your present range with an omni antenna. But there's more! Big city environments are RF garbage dumps, right? Noise and interference wreak havoc and consternation on all but the best scanners, and sometimes even them, too.

Say there is a nearby repeater or pager transmitter that overloads your scanner's front end. The expensive fix is to buy a notch filter or a tunable filter and notch out the offending signal. Often it doesn't work. A TV antenna will work! Sure! Just rotate the antenna until one of its side or back nulls is pointed at the offender, and the results can be startling! Oftentimes, the offender will disappear into the noise, even if you're tuned to the sucker! When the offender is nulled out, the antenna will still receive signals from the forward and other directions.

A TV antenna has many peak and null lobes around its 360-degrees of view. The deepest nulls will be on the back while the highest peaks of gain will be off the front. Nevertheless, there are a whole slew of minor peaks and nulls on each side of the antenna between front and back, and these can be used to great advantage when selecting a desired signal and rejecting one or more undesired ones. The list goes on, but time and space force me to move on. You get the idea?

If you choose to use a directional TV antenna for scanning, it will work wonderfully well between about 30 MHz and 1 GHz and better than a discone down to 25 MHz and up to 1.3 GHz. The caveat here is HOW to install it......NOT the same as for TV reception.

A TV directional antenna used for scanners and scanning should be mounted in the VERTICAL plane....that is, with its elements pointing into the ground and into the sky with the boom retained in the horizontal plane as for TV reception. A short mast should be rigged into the normal mount of the antenna....say 2-ft to 3-ft, max. This

side mast must mechanically join the real mast that rises vertically from the rotator. Any number of methods of making this a rigid, lasting mount can be employed and will not be presented here.

A TV matching transformer (300 ::75 ohm balun) should be fitted to the antenna as is customary for coax feeds. Then use RG-6 satellite cable from the other end of the matching transformer down to the scanner. Use gold plated Type F connectors on each end of the coax. Down at the scanner, use a gold plated Type F-to-BNC adapter to mate the coax to the scanner. Voila! A low cost, high performance directional beam antenna for your scanning post. Now here is why the sucker works:

Consider:

TV antennas for the USA are expressly designed as follows:

54 - 88 MHz Ch-2 - Ch-6 (34 MHz Passband)
88 - 108 MHz FM Broadcast (20 MHz Passband)
(Good for about 30 MHz to 158 MHz)
174 - 216 MHz Ch-7 - Ch-13 (42 MHz passband)
(Good for about 130 MHz to 324 MHz)
470 - 890 MHz Ch-14 - Ch-83 (420 MHz Passband)
(Good for about 352 to 1.3 GHz)

In order to get specified performance at the band edges, the antenna has to be "overdesigned" by the mfgr, meaning that positive gain and useful F/B ratio will be apparent well outside the bands of design.....i.e., the TV bands.

Now let's look at the gaps in the above spectrum which include desired scanner frequencies:

25 - 54 MHz (29 MHz gap)
108 - 174 MHz (66 MHz gap)
216 - 470 MHz (254 MHz gap)
890 - 1300 MHz (410 MHz gap)

Understanding that a wideband antenna will still perform with gain and other specs within 1-octave of its design passband, it can be seen that all of the above gaps are well within one octave of the passbands. For instance....one-half an octave up from 216 MHz places an edge at 324 MHz. One-half an octave down from 470 MHz places a cutoff at 352 MHz. (I'm using half-octaves to be conservative even though full octaves are valid).

Therefore, even in the widest gap of 216-470 MHz, there is ample overlap coverage from the passbands of 174-216 and 470-890 MHz. The worst coverage in the spectrum will be between 324-343 MHz, but even there, it will be superior to that of a discone or any other omni scanner antenna!

The simple conclusion, which can be empirically demonstrated with minimal effort, is that a TV antenna will perform well above a discone

at 343 MHz, a point halfway in the gap of 216-470 MHz. It doesn't matter that performance will be slightly down from the TV band specs, because GAIN, F/B ratio, and side-lobes will still make the antenna a superior performer to discones, dipoles, and even narrow band yagis, and for that matter, log periodics which have low gain for their wide bandwidth....typically 6-8 dB.

A TV antenna will be competitive with the log periodics even in the gaps of its performance.....and as a PLUS, will cost a LOT LESS. More of a PLUS is that TV antennas are easier to install and maintain than the larger, high profile log periodics. Finally, neighbors are less likely to bitch, whine, complain, and turn you in to some nasty authority when all you have on the roof is an innocuous TV antenna, even if it is mounted "all wrong". Neighbors will just think you are stupid and leave you the hell alone.....which is what you want, right?

Here is some more information about FRG9600, the sniveling little coward who gets his kicks by posting people's addresses and telephone numbers in rec.radio.cb and rec.radio.scanner.
FRG9600 has a rather lengthy history of publishing people's addresses and phone numbers under various e-mail addresses; this can be verified by looking up his posts in Dejanews under FRNKBURNS@aol.com, N73@aol.com, and radio@ismylife.com. Despite the fact that his Netcom ISP account was terminated in April 1997 for sending forged posts through Usenet, he has continued to violate the clause in his AOL Terms of Service agreement which states that he will not divulge any personal information about a person's account, a clause which can be extended to other ISP's as well, by publishing people's addresses and phone numbers in rec.radio.cb and rec.radio.scanner. His activities on AOL over the past several months are reason enough for his AOL account to be terminated, or at the very least his access to this newsgroup to be restricted. Anyone who would like to file a TOS (Terms of Service) complaint against FRG9600@aol.com should send copies of his postings to <postmaster@aol.com>.

Yes there is still a seperate issue. The RS guy doesn't know 'cause they
don't sell it, and most of them don't much unless it sia RS product. Try
a ham radio type of store. A new issue comes out about November.
Good Monitoring;
Don :-)

2637. Re: Uniden BC2500XLT

Does anyone know if there is available a battery pack for the BC2500XLT that
takes individual Nicads, such as is made for the BC200XLT? If not, where is the least expensive source for the replacement battery packs for the BC2500XLT?

The CE-232 SCANNER/COMPUTER INTERFACE
from
COMMtronics Engineering
PO Box 262478
San Diego, CA 92196
Voice: (619) 578-9247 (1:30PM-5:30PM weekdays)
Fax: anytime
E-mail: bcheek@san.rr.com
WWW: http://ourworld.compuserve.com/homepages/bcheek

Optoelectronics has several great comuter interfaces for scanners that are widely discussed and touted around scannerland. Optoelectronics is also a large company with a very nice advertising budget. We're the little guys with almost no advertising budget, but we have a very competitive kick-ass scanner/computer Interface.

Our CE-232 Scanner/Computer Interface is an alternative to the big guys' interfaces. While each does its own distinct "thing", the CE-232 holds no second candles and proudly offers power and capability unmatched by the big guys. The scanner is always fully operable with or without the CE-232!

OVERVIEW
========

The CE-232 Scanner/Computer Interface is a 2.5" x 3" electronic board that goes between an IBM-PC/XT/AT/compatible computer and a scanner, for some very powerful capabilities.

The CE-232 is a -smart- RS-232 2-way Interface controller and data acquisition system for some scanners and at least a drudgery-free automated programmer and remote controller for all supported scanners.

The CE-232 eliminates the drudgery and disappointment in scanning by its ability to "AutoProgram" up to 999 memory channels from a plain ASCII text file in a short time, error-free and exactly the way you want it.

The CE-232 allows control of the scanner from the computer's keyboard; a strong plus for handheld scanners and those with hard-to-operate keyboards!

The CE-232 is a one-way controller and AutoProgrammer like described abovefor MANY scanners, including the PRO-2004, PRO-2005, PRO-2006, PRO-2042, PRO-2035, PRO-2022, PRO-43, PRO-39, PRO-37, PRO-34, PRO-26,

etc.

* The CE-232 is a TWO-WAY controller and data acquisition system for *
* the time-honored PRO-2004, PRO-2005, and PRO-2006 scanners which *
* have unique circuitry that allows the CE-232 to do a LOT more than *
* just AutoProgram and Remote Control, including AutoLog "hit" data",*
* AutoReject unwanted signals, AutoLookUp data about frequencies and *
* much more described below. *

Inquire for details about these or the other scanners with which the
CE-232 Interface is powerfully capable.

==
DESCRIPTION OF CE-232 PERFORMANCE & SPECS
==

** Operate the scanner from the Computer's Keyboard! **

REMOTE CONTROL FROM COMPUTER'S KEYBOARD:

Virtually all functions of the scanner can be operated from the
computer's keyboard. For example, a replica of the scanner's front
panel is displayed on the monitor along with a keypad emulator to show
the keys to be pressed as if you were operating the scanner in a
normal manner. The CE-232 does not slow down the scanner nor alter
its peformance in any manner! Not only can you operate the scanner
from the computer's keyboard, you can also operate normally from the
scanner as well.

NOTE FOR PRO-2004/5/6 ONLY: As the scanner operates, the computer
monitor displays EVERYTHING that the scanner shows in its LCD display!

==

** The scanner is AutoProgrammable by the CE-232! **

AUTOPROGRAMMER

The CE-232 can auto-download into the scanner's memory up to 999
channels at a time, from a previously prepared plain text list of
frequencies! Auto-Programming includes channel, frequency, DELAY,
MODE, and LOCKOUT functions as desired.

This AutoProgram feature applies to all supported scanners, limited
onlyby the number of memory channels in the scanner, up to a maximum
of 999.

You can also manually program the scanner from the computer's
keyboard, in conjunction with normal remote keyboard control as
described above.

NOTE: The AutoProgrammer function of the CE-232 uses a very simple
ASCII text format, well within the capability of any text
editor and/or database manager to construct and lay out.

** The CE-232 has 3rd party support **

The PerCon Corp (regional+) FCC-Databases-On-CDROM have a special export feature for the exact type of file format (*.APF) for quick and automatic generation of AutoProgrammer files for the CE-232 Interface! Within minutes, you can have thousands of frequencies for your area ready to be AutoProgrammed into your scanner! For more information about PerCon Corp and their FCC Database products write or fax:

PerCon Corp; 4906 Maple Springs/Ellery Road; Bemus Point, NY 14712
Fax: (716) 386-6013 Voice: (716) 386-6015
E-mail: admin@perconcorp.com http://www.perconcorp.com

==========

** CE-232 has 4 Electronic Switches for User Control of modifications & other scanner functions **

USER DEFINABLE CONTROLS

The CE-232 offers four user-definable switches that can be used to control add-ons or other modifications that you may have done to your scanner! Uses for these User Switches are virtually unlimited, but might include turning on/off things like Automatic Tape Recorder Switches; extra memory banks; Data/Tone Squelch and any other of my mods or add-ons that you've developed or acquired. These UserSwitches

are controlled by YOU and, if desired, automatically by the computer using the Script function! (The Script Function is described below.)

(User Switches available for all supported scanners)

==========
THE FOLLOWING FEATURES WORK ONLY ON THE PRO-2004/5/6 SCANNERS
==========

** Easy-to-use AutoLogger feature **

AUTOLOGGER

The CE-232 will AutoLog for unlimited periods of time, any and all activity encountered by the scanner, regardless of the mode. Each -event- (squelch break) is logged to a text file as a data line item containing the following information at a minimum:

CHANNEL: number
FREQUENCY: MHz
MODE: AM, NFM, or WFM
DELAY: status, set or not
LOCKOUT: status, set or not
FUNCTION: Prgm, Man, Scan, Search Up, Search Down, etc
STEP: Search increment, kHz, if applicable
DATE: of event
START TIME: of event

DURATION: of event (seconds)
(and more): several user-definable parameters including S-metering!

Autologging can be turned on or off at will. Autologged files are automatically opened and named with a date/time logo, similar to: 96070812.LOG meaning: 1996, July 8, 12th hour (noon).LOG. Each hour, a new log file is opened and the old one closed & saved. AutoLog files can never get too large to manage.

Autolog files can be AutoProgrammed back into the scanner's memory at will with no manipulation or changes; just the press of a couple of keys! This means that you can do a SEARCH function all night or day while you're away and then at your leisure, program in each new found frequency quite simply, hands-off, in a matter of minutes!

PRO-2004/5/6 feature only

==========

** CE-232 rejects "birdies" and other undesired signals! **

AUTO-REJECT

You can do like I did.....disconnect the antenna; set the ATT switch to the -10 dB position and do a SEARCH from 25 MHz - 1300 MHz with the autolog feature ON. About two hours later, you'll have a file that contains just the BIRDIES in your scanner! Now you rename this file to something like BIRDIE.REJ, and the next time you do a frequency search, you can specify another CE-232 function called AUTO-REJECT, that prevents the scanner from locking or stopping on a "birdie".

But that's not all! You can insert other undesirable frequencies into the BIRDIE.REJ or another *.REJ file, so not only can you EASILY make the scanner forever reject birdies, but also pagers, data channels and other obnoxious signals that you don't want to monitor!!!

PRO-2004/5/6 feature Only

==========

** CE-232 offers a LOOKUP feature for I.D. of signals! **

AUTO-LOOKUP

The CE-232 sports a LOOKUP function which displays your data for a frequency every time the scanner STOPS on an active signal! Your previously prepared AutoProgrammer File will do nicely for this function, and thereforewill display whatever is in your database for that frequency! Great for quick identifications of the signals received by your scanner!

PRO-2004/5/6 feature only.

==========

** CE-232 offers a Script Function and Language to automate scanning!
**

AUTOMATED SCRIPTS

And, now comes perhaps the most important feature of all: a very powerful -script language- which lets you automate a series of functions to make the scanner do various things while you're away or not interested in being right there for the operation!

In simplest form, you can make a Search & Store function to log everything it hits the first time, but to reject duplicates if hit again! You can make things happen at certain times and stop at other times; and otherwise the Script Language allows you to write your own convoluted functions and procedures! Essentially, this scripting feature is much like a macro function; you write your own ticket! And it's not difficult, either. In fact, many scripts are provided with the program!

PRO-2004/5/6 supported feature (but may work with other scanners)

==========

** The CE-232 has flexible inputs/outputs for the User **

USER-DEFINABLE INPUT/OUTPUT BITS

The CE-232 offers 22-bits of unallocated, user accessible I/O registry. There are 8-bits of Output logic that can be controlled from the CE-232 Script feature simply by setting -low- and -high- in these bits. The implications are enormous considering that a variety of logical operators can be configured to turn various bits on and off, depending on a variety of user defined input data. The status of these user-defined and script controllable OUTBYTES is displayable and recordable by the AutoLogger.

The CE-232 offers 14-bits of Input Logic that can be tested from the Script function. High and low logic (+5v and 0v) can be applied to these input bits from external sources, much like sensors for idiot lights in a car. One application we have developed is for an S-METER! The AutoLogger can read and store these Input bits, so every -hit- can be associated with a signal strength!

==========

MORE 3RD PARTY SUPPORT:

We can't say much about it at this time, but exciting new support is on the way from 3rd parties.

==========

OTHER INFORMATION
==========

The heart of the CE-232 is a non-proprietary computer on a chip made by Motorola (68HC11 family). But the neat thing is that this microcomputer does not contain any firmware or hard programming like others do! Instead, the proprietary software is on the supplied disk and is loaded into the microcomputer chip each time you boot the CE-232 program! This means that we or 3rd parties can develop inexpensive updates on disk can be made available at regular intervals. Other suppliers would have to provide a whole new chip to make upgrades; more expensive to them and to you!!

==========

HOW THE CE-232 IS AVAILABLE
==========

The CE-232 is available in four different ways and forms:

1. As a Kit of essential parts, including a professional printed circuit board; six DIP integrated ciruits; one non-proprietary microprocessor chip & chip carrier socket; and a small handful of parts (resistors, capacitors, diodes, crystal, voltage regulator, etc.) Included is our proprietary program disk.

Not supplied are standard DIP IC sockets (highly recommended); solder; wiring; serial cable; input & output connectors nor a project box in which to install the CE-232. The board can be installed inside some scanners, if desired, but an external box is much better for most situations.

Included are a very detailed Manual, and Program disk with control program and many supporting files.

2. As an assembled and tested board, ready for you to install in a project box or in the scanner. Comes with the same Manual and Program disk as above.

3. Complete turn-key installation and setup - we do it all.

4. As a totally do-it-yourself project, featured in Bill Cheek's new ULTIMATE SCANNER book with complete instructions and resource guide!

==========

PRICE & AVAILABILITY - Quoted by e-mail upon request or at our Web or FTP sites.

==========

==========

TECHNICAL SUPPORT
==========

Doubtful of your abilities, are you? Relax. If you know the difference between a soldering pencil and a welding torch, you can probably do the job. The 100-page Manual takes you step by step to

success, and it has been done hundreds of times before you came along.

Yes, people have had problems, most very minor..... But, if you have ANY problem, we will provide Technical Support until you have reach success. It's old-hat to us....we've worked with green weenies and salty experts. We have been able to guide to success EVERY purchaser of the CE-232, who has come to and stuck with us for Tech Support.

The primary tech support media are either Internet e-mail, or the Hertzian Intercept BBS where there is a special forum and a file area expressly for the CE-232. Some people don't like BBS's or don't have a modem. So support is also available by FAX, Internet e-mail, CompuServe, and if necessary, snail mail. The only medium where tech support is definitely not available is voice telephone.

One, it's too costly to be distracted by the phone, so I don't use it under ANY circumstances, but two: technical support for electronic technology is NOT very effective by voice. The written medium is the BEST and we assure you of timely support when you need it....almost always within 24-hours of your request, if by electronic means.

Sorry....mail takes whatever time it takes, but BBS, FAX, and e-mail get our immediate attention. The bottom line is we won't let you and your scanner flounder because of a few little problems.... though if you follow our instructions, you are not likely to run into any problems that you can't handle on your own. Tech Support is one of our strongest commitments.

==========

CAVEATS & REQUIREMENTS
======================

The CE-232 works with a PC/clone computer with MS-DOS 3.1 or higher. A minimum of 512-k memory is required along with about 3-Mb of free hard disk space. (Operation from floppy disk is possible.)

Operation under Windows 3.1, Windows For WorkGroups 3.11 and Win95 has been tested and proved.

MACINTOSH NOTE: We do not support the CE-232 with Macintosh computers, but we can refer you to those who might. Inquire.

The CE-232 connects to the computer's A or B serial ports (COM1 or COM2 only) by means of a standard serial cable of any reasonable length, say 25-ft or less. The computer's COM port must be capable (and most are) of 9600 baud, 8-data bits, no parity and 1 stop bit: (9600,8N1).

The CE-232 has been tested on an XT/clone, 386SX/16, cx386SX/33, i386DX/33, i486DX/50, i486DX4/100, AMD486DX4/100, AMD 5K86/P90, and Pentium computers with equal success and good results. Hundreds of CE-232's are in operation around the world on a wide variety of computers and operating environments, by professionals and hobbyists,

alike.

The CE-232 was designed for the PRO-2004/5/6 series of scanners, but it works to a limited extent with many other scanners. Inquire or see above for the latest.....

The CE-232 works with all known scanner modifications EXCEPT crystal speedups where the Clock Resonator was replaced with a quartz crystal to speed up Scan & Search. Unfortunately, the original Resonator must be reinstalled in order to be compatible with the CE-232. (We can supply them if you lost or broke yours.)

==========

ASSEMBLY & INSTALLATION DISCUSSION
==========

Assembly of the printed circuit board is straightforward and not at all complicated. It takes me about an hour complete the board with no instructions! My 15-yr old (at the time) daughter, Ali, assembled a board in under 2-hours using ONLY the written instructions I had provided her. Her Board worked the first time out.

Three wires (serial cable) are required between the computer and the CE-232 and about 10 to 20 wires between the CE-232 and the scanner, depending on the scanner and functions you want. These connections are not difficult in most scanners.

For the PRO-2005/6, removal of the Logic/CPU Board from the front panel is required for five of the connections; no big deal, maybe intimidating to the uninitiated, but the instructions are clear.

The most difficult part of the assembly & installation process is fitting the CE-232 board into a project box; mostly a simple mechanical matter. Many of YOU will be more inclined in this area than I am.

If the CE-232 is installed in a project box, then a method must be devised to connect the CE-232 to the computer and to thescanner. I use a DB-25 connector mounted on the rear of the scanner and then wired within to the required points in the scanner. A standard parallel cable connects between the DB-25 connector on the scanner to a mating DB-25 connector on the rear of the external metal box. Piece of cake that way. And then the CE-232 is capable of working with more than just one scanner that way!

Operation of the CE-232 is a snap! The program is easy to use with pull-down menus and a detailed set of documentation. Much in the way of convenience is built into the CE-232 software.

==========

WARRANTY & GUARANTEE
==========

The CE-232 is a KIT, even in assembled/tested form. Unless we install

it, we cannot guarantee it like ready-to-run factory merchandise. But

we do offer 5-day/100% and 30-day/80% money-back policies (less shipping & handling) provided the sealed, translucent -bag of parts- has not been opened or tampered and the Kit materials are returned in like-new condition within those periods. This gives you the opportunity to review the Manual and the Program Disk and to make up your mind about committing to the Project. If you commit to it, then we commit to your success via our Technical Support Program described above.

==========

DO YOU HAVE QUESTIONS?
======================

I am open to your questions of what the CE-232 will and will not do as well as anything else that might be related to your uncertainty as to whether or not the CE-232 is right for you. You can communicate with me via the FidoNet SHORTWAVE or SCANRADIO echoes, some of the Usenet scanner newsgroups, or by means listed below.

The true part is military "heavies" using VHF for airspace comms, the
false part is the "haircut holdup", it never happened. Check out the
folklore newsgroup. :-)

I am having problems with my TrunkTracker (TT) in my immediate area. I am in Atlanta.

I can not get Gwinnett county or DeKalb county to TT reliably. It is as if the radio can not find the data channel. I do not have the problem with Fulton county or City of Atlanta; so I do not think it is an antenna problem. I have double and tripled checked the frequencies; and am not missing any. In fact, on occasion, I can get DeKalb & Gwinnett to TT, but not all the time. Any suggestions?

Try Metro-West of LaGrange Park, Il. They carry batteries, cases,
accessories, antennas and much more for lots of hand-held scanners. Plus,
they have a 30 day return policy on anything you are not satisfied with.

Call them at 708-354-2125 or (ORDER ONLY) 800-657-1475

Hi John. I seem to recall many on this NG having problems with you. You left and now you are back at it again. Not true? Then why so many posts from John Mackey that have nothing to do with scanning? IOW, why not a single post from John Mackey that has to do with scanning? Why only flames, profanity and smart remarks? Rather than bad mouth all those that disagree why not dazzle them with your technical expertise? I for one would love to see you share some of your vast knowledge with the rest of the group. I know what a brilliant ham operator you are. You certainly are a whiz kid when it comes to repeaters, probably the most knowledgeable of all on the West Coast. God only knows the depth of your CB knowledge. Why don't you share some of it with the NG? I know I would love to see your positive side on here. How about it? Teach us something about radios or antennas? What do you say John, show us what you really know.

Glenn

2647. An open letter to Lloyd Parker

Newsgroup: rec.radio.scanner
Date: 1997-07-27 00:00:00 UTC
From: Caveman <omega@powerlink.net>
Message-ID: <33DC1343.FB5C2A74@powerlink.net>
Source record: 190325
Body handling: HTML body converted to readable text

Comrade Parker--

Your precious Damnocrats and certain Republicans ARE the problem.
No,

The Slick One is not thought well of. The American public is
just

getting so innoculated to his Administration's unlimited felonies,

suspicious deaths and piccadiloes (adultery, etc.) that they are

becoming immune to the latest crimes of the Klintons.

Since this is a SCANNER newsgroup, let us address a pertinent issue--a

DEMOCRAT is the one proposing that scanners, in effect, be banned.
One

by one your precious party (aided by certain Republicans,) is

evicerating our Constitution to include the Bill of Rights. BTW,
Mr.

Parker, those precious rights are INDIVIDUAL rights, and NOT collective,

as people of your ilk (read bent) are proclaiming.

Your feeble and thinly veiled attempt to paint Brad Cuppy as a racist

because he spelled Clinton as "Klinton" is typical of your type--throw

up a lot of chaff in the air, muddy the water with personal attacks
and

the basic degradation of people who don't agree with you just draws

attention to the fact that you are 1) bereft of factual and imperical

evidence to support your opinion, 2) more intent on symbolism over

substance, and 3) ignorant as to the Constitution and how your pal

Comrade Wilhelm von KKKlinton, et al, are trashing and thrashing
our

Founding Document. Billy doesn't care what the Constitution says
as

long as he knows where to get his "groinal itch" scratched next.
Since

you support such a character, the word "Integrity" is most likely lost

on you.

I am going to fight tooth and nail to protect my Rights, such as owning

firearms if I choose, and listening to whatever frequencies I want
to

(Liberty and Pursuit of Happiness ring a bell?)

So, please, unless you are willing to contribute something positive,

don't harrass and harrangue those of us who are trying to defend our

hobby, and, on a greater scale, our RIGHTS. Doom On You, Lloyd.

BTW, I challenge you to check out my webpage:

http://www.geocities.com/CapitolHill/4326. Bring along a defibulator,

as your bleeding heart will go into cardiac arrest.

Caveman

"The soldier, above all people, prays for peace, for it is he or she
who

must bear and endure the sufferings of war."

2651. PROgrammit Interface for Many Scanners

Newsgroup: rec.radio.scanner
Date: 1997-07-27 00:00:00 UTC
From: wiggie@kansas.net
Message-ID: <33DC1BEC.2FE4@kansas.net>
Source record: 190329

If you haven't had time to look at this new interface...you should. Many ppl just would like to have a way to program their scanner's memories. I have truely enjoyed my Pro-2035 with the OS535 under the command of Probe software, but without the computer it looses its plethora of channels. I had built a interface and just started work on the software when John Montalbano e-mails me because of a response that I had posted to a newsgroup. He had been working on the same type of interface, but had a better design, had time-tested it and had punched out the code to make it go.

It is currently a parallel port design, but you can get by with having a DB9 connector on the back of your scanner. Most of the basic parts will run you about $12-15, but with a DB9 you will have to make a special cable for this to work. I will be making/testing some interfaces that are external models and testing them for various scanners. John Montalbano has been working on serial port designs also. With the serial port design, you will be able to install it inside your scanner and only have to drill a small hole in the back of the chassis for a 1/8th inch mono jack. We are trying our best to design wiring harnesses and PCB's to make it very easy for a beginning project, yet keep the price down for everyone. The well-seasoned hacker could take the chips, perfboard and solder tails and have one kicked out in no time flat! Most of the parts would probably be stuffed away in the drawers of his shack anyways.

I just programmed 1,000 channels in my Pro-2035 in 11 minutes 25 seconds. Now for the disclaimer! I did have the last 3 banks empty and a few blank channels here and there in the other banks. But this program will go through and enter a "0" frequency in each of the blank channels and will LOCK IT OUT! It will also lock out other channels that you want along with activating the DELAY, PRIORITY, etc. I just programmed a bank (100 channels) in 1 minute, 46 seconds. That was a full bank with an actual frequency in each channel complete with PRIORITY, LOCKOUT, DELAY, etc. You might be looking at kicking out 1,000 channels in under 18 minutes..much faster than wearing out the ol' fingers.

This works for a wide range of scanners! This interface has already been installed into Pro-2032, Pro-2035, Pro-2042, Pro-2004, Pro-2005 and Pro-2006 models and the list is going to start on Unidens, handhelds, etc as soon as we can get around to doing so. Imagine getting ready to go to the local airshow and your scanner is programmed while you have stepped into the shower. I will gladly help anyone with questions. There is a mailing list that you can also get on for help from others that have built this interface and are enjoying its benefits. All I can say is get started on it today if you can solder the parts together and just read up and get on the mailing list if you are waiting for a kit design or maybe a prefab unit. Some of the techs out there can help us out too,

because you have seen the "guts" of many scanners and could help making it work in those scanners.
Go to http://www.geocities.com/SiliconValley/Way/1522/ and get started today. If there are some question about parts, etc. We are here and readily available to help out.

Wiggie

From the FAQ article SCANNER RADIO REVIEW BRIEFS:

[...]

PRO-62: 1994 vintage. Good portable 200 channel scanner
using up conversion. Similar to PRO-43 but no military air
band, different upper frequency limit, and slightly
different IFs. Selectable AM/NFM modes. Better intermod
immunity than PRO-43. See "The Radio Shack PRO-62," by Bob
Parnass, AJ9S, in Monitoring Times, February 1995.

>I would like some feed back from this group about the best computer
controled software for my AR 8000 scanner, Please and Thankyou!
>
>
I used Scancat Gold (DOS version) with my AOR8000, along with the Optolink
interface. The set up worked quite well, although I was not at all happy
with the software. The GUI was quite old fashion looking, the layout
bordered on the bizarre and the keys to press for certain commands did not
seem to have any logic behind them. Still, it had all of the bells and
whistles that you need: Run the scanner, set up search and scan banks,,
program freqs etc. There's a Windows version out now but I haven't seen
it. Do a search for Computer-Aided Technologies, find their site and
download the demo. There are a number of shareware programs out as well
but I don't have any first hand knowledge of them. Sold the AOR8000 more
than a year ago. About to buy another, though and will have to go through
the same thing you're doing.

Message-ID: <19970727033600.XAA22697@ladder01.news.aol.com>
Source record: 190406

Actually, only one is a scanner. The other is a two-way, a transceiver.
I had a chance to play with one of the scanners last weekend during
the Dayton Air Show.
Except for having only 20 memory channels the radio is very impressive.
As I'd been told, the audio is excellent, easily twice as loud as my
BC3000XLT, and very clear, even at max volume. A couple of points I didn't
know: VHF-AM coverage extends up to 142.975, so you can get most of the
military VHF tactical freqs.; and it will search the entire band, from
118.00 to 400.00, which helps alleviate the memory channel problem.
It seems that the supplied antenna is peaked for VHF. Slipping on a
Watson Super-Gainer really boosted the UHF performance.
Forget ordering the battery charger from Sportys. They want $55.00 and
the radio uses standard AAs, so buy your charger at Radio Shack. However,
do spend the $9.50 for the optional belt clip. This thing is massive, and
made out of aluminum. Best belt clip I've ever seen on a scanner.
I didn't have enough time to check the radio for images or intermod,
but they certainly didn't appear to be a problem. Overall, it looks like a
great buy for $150.00.
(Yes, I know the Pro-60 is on close-out for $199, but those won't last
forever.)
Call Sporty's at 1-800-LIFTOFF and ask for a catalog (actually, ask for
all four catalogs, they've got some nice non-flying-related things, too).

Hi, I'm looking for a scrap Browning Mk2 or 3 receiver, specifically the power transformer for such, identified by part number TR68-RT.

I am also looking for a source of I.F. (Intermediate Frequency) transformers, 455kc (kHz) such as the J.W.Miller 12C30 or the Stag "K-Trans" 4 lug variety.

Any pointers to either would be greatly appreciated, thanks, Stan!

STANDARD SOCIAL CONTRACT

Between _____ and THE GOVERNMENT OF CENTRAL NORTH AMERICA

WHEREAS: I wish to reside on the Central North American Continent and to be helped by the Government;

WHEREAS: The Central North American Government controls the area on which I wish to reside and; WHEREAS: Tacit and implied contracts, including the Constitution of the United States of America, are vague and therefore unenforceable;

THEREFORE, I, THE SIGNER BELOW, agree to the following terms:

SECTION ONE. I will surrender a percentage of my property to the Government, such percentage to be determined by the Government and subject to change at any time at Government discretion. The amount to be surrendered may be based on my income, my net worth, the value of my purchases, or any other criteria the Government may choose. To aid the Government in determining the percentage, I will apply for a Government Identification Number which I will use in all major transactions.

SECTION TWO. Upon Government demand, I will surrender my liberty for a period of time to be determined by the Government, typically no less than two years. During that time I will serve the Government in any way it chooses, including military service in which I may be called

upon to sacrifice my life.

SECTION THREE. I will limit my behavior when and as demanded by the Government, including but not limited to the following: I will consume only those drugs permitted by the Government; I will limit my sexual activities to those permitted by the Government; I will forsake religious beliefs which conflict with the Government's determination of propriety and validity.

SECTION FOUR. In consideration of the above, the Government will:

A. Permit me to seek employment, subject to any limits which might be determined by the Government, such as choice of career or wages I may accept.

B. Permit me to reside in the area of North America which it controls.

C. Permit me to speak freely, subject to limits to be determined from time to time by the President or his authorized representatives, the Congress and/or the Supreme Court.

D. Attempt in good faith to protect my life and my claims to any property it may have allowed me to keep. [Note: I may not, however, hold the Government liable, or responsible, or accountable in the event it fails to successfully protect my safety or my property. The fact that the Government may deny me the right, or the means, of self-protection places no responsibility whatsoever upon the government for any injury or loss I may suffer as a result.]

SECTION FIVE: The Government may offer various services to me, the nature and extent of which shall be determined by Government and subject to change at any time, and for which I may be charged at whatever rate is determined by Government.

SECTION SIX: The Government will determine whether, and when, I may vote for certain officials, and the relative influence of my vote. The influence of my vote will normally vary inversely with the total number of voters, and I understand it typically will be of little or no consequence. I agree not to hold any elected Government official liable for acting against my best interest or for failing to uphold oaths or promises, even if those promises motivated me to vote for them.

SECTION SEVEN: I agree that the Government may hold me fully liable if I fail to abide by the above terms in their entirety. In the event of such failure on my part, the Government may confiscate any property that may remain in my possession, and may imprison me for a period of time to be determined by the Government. I also agree that the Government may, at its discretion, alter the terms of this contract at any time, with or without my knowledge and assent..

SECTION EIGHT: I agree to permit the Government to decree the specifications of my shortwave and scanning receivers and to tell me

what I can monitor and what I can't, knowing full well that the
Government is always out to help me.

I don't think the airline would want to report it to the media. It would
be up to YOU to call the media an dlet them dig out the facts.
As for the freq it would help to know where you are. The airline company
freqs are "reused" allover the country. In other words airline "X"
doesn't have a "lock" on any particular freq. Try listening to just that
freq for a while or record it. Sooner or later you will hear enough
"facts" to figure out the airline.
Good Monitoring;
DOn :-)

+-------------------------------------------------------------------+

====================================================================

Please note that a new version of WiNRADiO software
is now available for download from the following Web sites:

http://www.winradio.com/SWARE.HTM
http://www.winradio.net.au/SWARE.HTM

What's New in WiNRADiO version 2.10
-----------------------------------

Version 2.10 contains a full implementation of VisiTune, our new
method of graphic tuning, part of the Spectrum Scope facility.

You already know that if you drag your mouse across a scanned
spectrum, you can click anywhere within the spectrum and you will be
tuned instantly.

This feature has now been extended substantially. This new
functionality (which one of our beta testers called "the ultimate
scanning sensation"), is called VisiTune. We liked it so much that we
patented it.

With VisiTune, you can do the following (assuming you are using the
Spectrum Scope):

* Hold the left mouse button down and keep dragging the frequency
cursor. The receiver will tune continuously, following your hand
movements. Hear the stations change as you move the mouse between the
peaks on the spectrum sweep!

* Manually sweep the spectrum display behind your cursor, if you
enable the Manual Refresh option in Options menu. (Use RBW=17kHz for
FM-N or RWB=6kHz for AM, if you wish to take advantage of this
feature. Not recommended for FM-W.) Also note that for very fast hand
```

movements over a large frequency range, the receiver's settling time might not allow accurate updating of the displayed spectrum.

* The true potential of VisiTune is unleashed if you have two WiNRADiO cards installed: You can have one card continuously updating the displayed spectrum in real time while you are tuning around and listening with the other card. You can decide which card to use for listening and which for continuous sweeping.

Other new features in version 2.10:

1. You can now pause and resume a spectrum sweep.

2. It is now possible to override default time zone setting of Windows 95 and NT.

3. A new installer places WiNRADiO files into Program Files rather than the root directory, and uninstallation is now supported.

If you still have old WiNRADiO software installed (version numbers 1.xx), now it is time to upgrade!

This is what has been introduced in version 2.xx:

1. Spectrum Scope facility

2. Stepping size resolution is now 100 Hz and the step size is now adjustable in a range of 100 Hz to 10 MHz

3. An extra scanning Pause mode in Scanner Setup

4. Enhanced range scanning (stored variables now include mode and squelch settings)

5. Memory group numbers are now shown in Memory viewer

6. Squelch is now joined with scanning sensitivity (but can be separated in General Options)

7. Signal Strength value is now shown within the Signal Strength display

8. Long file names are now supported for Windows 95 and NT

9. "Always On Top" feature

10. "Hide Title Bar" feature

11. Drivers for Windows NT 3.50 and above are now supplied as part of the installation program

Strong signals and happy scanning!

I am using Scancat Gold for windows seems to work well. I am using AOR 8000 with optolinx on a 200mmx system and a 486 laptop. The best feature is if you travel you can down load the frequencies in no time. Also if you are into logging Scancat works great.

>I don't think the airline would want to report it to the media. It would
>be up to YOU to call the media an dlet them dig out the facts.

Why? The media already puts their nose into enough stuff they don't
belong in. And they always exagerate. If you did this there is no doubt
they would blow it way out of proportion. Chances are this was not even a
bomb. But the media would never say that. All it would do is scare
someone else out of flying which is the safest means of travel around.

I strongly believe that you cannot transmit AM signals with ADI's
AT-600. It is possible to receive AM mode, but shouldn't be capable
of transmitting... If you know anything regarding to this matter,
please let me know.

The haircut at the airport happened, but was any aircraft delayed
by it is the second part of the statement, which requires that
the ramp where the haircut was given, could have been used when
the airport was in a particular runway configuration.

the makes me sad.
Ive been monotoring for over 35 Years. to think that now their is a law that may lock me up for some thing that Ive been doing for all theis years. I guess my fredoms are going little by little.
in just a few years scanners will be totaly banded.

WHAT EVER HAPPEND TO WE THE PEOPLE. 1787
Congress created a radical goverment charter that gives ultimate power to the people. (I did not get a vote on the scanner law)
WHAT EVER HAPPEND TO THE DECLARATION OF INDEPENDENCE 1776
Congress bold proclamation of freedom from Britain. An inspiration of liberty for all future generations. Drafted by Thomas Jefferson. (money donated to the election of out goverment employes from orther countries)
WHAT EVER HAPPEND TO THE BILL OF RIGHTS 1789
The first ten amendments to the constitution. These amendments guarantee personal freedoms not specifically stated in the constitution. even tough the bill of rights has spurred many controversies in out american society. (whats left of it?) (no one cares, no one know whats written on the paper any more. teachers are teaching computer not history any more--- kinda like brain washingin, with out teaching the basics)

sory to be so grim..... but stories like the one I just read make me sad.....

One of the best sites on the internet about cellular phones is now gone. The address: www.LOpht.com/radiophone/ is now gone. I am just praying that the site have simply moved, but I fear I may be wrong. The site was maintained by "Dr. Who". If any one knows why, or what happened, or maybe even, the slight chance of it moving, please e-mail me. If anyone knows of any other cellular related site, PLEASE LET ME KNOW. Thank you very much.

Very Sad,
EugeneD@aol.com

Source record: 190060
Cross-posted to: rec.radio.scanner,alt.radio.scanner

If I run in to people that have cellulatr phones, I tell them that what
they say on their cordless or cellular phones is NOT PRIVATE. I explain
that theuy devices have antennas and anyone else with a receiver (scanner)
that can tune to their frequency can hear everything that's being said...
If they don't believe me, I just let them listen to a few calls...
changes their mind real fast.
I showed my scanner to one gal at work and she became paranoid thinking I
oculd listen to her conversations at will wherever she was..this is not
the case. I have been at airports and seen people use cellular phones and
found their conversation. Otherwise, it's difficult to target a specific
phone to monitor unless you have equipment that is able to distinguish one
cellular phone from another. This would include an ESN reader or similar
device.

EKIM233 (ekim233@aol.com) wrote:

> CommTronics interface for a lot less money. It comes in a kit but TeePee
> implies that it is simple to construct (unlike the CommTronics interface,
> I'm told).

The CE-232 interface is a TWO-WAY interface. It not only AutoPrograms
and controls the scanner remotely, but it also acquires data from the
scanner; logs that data; and can make decisions based on the details
of that data. It can do a lot more than that, too.

The price of the CE-232 Kit is $149.95. (Not THAT much more for a
whole lot more performance and features!)

The CE-232 isn't a nightmare to construct. Some people say it's easy;
others say it is difficult. I say it is moderately difficult....but
only because it takes some time to do it right. It ain't a ten minute
project for half-wits and nincompoops. Neither is it a challenge to
anyone who knows a resistor from a resister.

I tested the prototype Instruction set on my daughter (age 15 at the
time). She successfully built the board in two hours and it tested
fine and passed QA first time out.

Does that sound overly challenging?

I hope they will bargain down to 1% of the asking price. That's
about all the PRO-2022 is worth.

> I'd really like a 2006

Indeed!

> but I'm trying to get a sense of the price this 2022
> becomes a good deal.

If the price were $17.90, I'd not quibble. Much more than that, and
I'd do some serious whining. The PRO-2022 is electrically the same
radio as the handheld PRO-34 - not a whit's difference.

Nice in its day, but of no intrinisc value now other than cellular,
and even that ain't going to be worth didley-squat soon enough.
Cellular is headed to digital in a big way..... then what?

CORRECT, NOT TRUE!

First, I never left this newsgroup. Second, I am NOT "back at it
again".
Third, the only ones that had a problem with me on this NG were those
handful that were supporting Bill Cheek attampting to use this NG for
his personal gain during a time he attempted to attack & slander me
abou a year ago.

To further support my claim that several were having a problem with Bill
Cheek & only a few were having a problem with me I might refer you to
Dejanews. If you do a search for "bill cheecks is an asshole" you will
find that this thread lasted about 11 weeks. A similar thread for me
lasted
abot 2 weeks, & died MUCH quicker due to such few posts.

> why not a
> single post from John Mackey that has to do with scanning?

You will find that I have made numerous posts about scanning & technical
issues. For example, just a few days ago I responded to someone asking
about the worthyness of Betty Bearcat (in THIS newsgroup).

Anyone have any idea where I can get this Super converter, and if it
really works. Please let me know.

I just checked this site out and all I have to say is DON'T BOTHER! The site is still under construction and there is virtually nothing worth looking at. If you want a decent price on a scanner out of the UK, go to www.demon.co.uk/~javiation. I've bought two scanners from them and I recommend them highly. They don't stoop to promoting stuff they can't deliver!

this statute does not apply to PORTABLE scanners carried in vehicle... so long as the unit is not ATTACHED to the vehicle... ie: Mounting bracket; power supply <from car>; or attached antenna. PORTABLE scanners <as if carried in your coat pocket> are not subject to this law.

Rob.

I've dealt with AES on numerous occasions since 1981 and even visited one
of the stores a couple of times. I had only two problems in all the times
I bought through them, and they were both taken care of with NO problem.

Every one can make a misstake. Get my point??????

Correct. To be honest, I've never heard anything in that range,
however.

>whenever I want to use that band I can just
>call up 100 and then hit "scan up" from there. It does not let you scan
>down for some reason

I'm not sure what that would be a problem. I have used "scan down"
(actually, I guess "search down" would be a better name for that
button) with no problem. However, the frequency which is in the 66.xxx
MHz range is near the bottom of that band of frequencies, so searching
down almost immediately enters one of the "normal" frequency ranges.

>Also I heard that some of the older versions unlocked the cel
>phone freqs in this way too. There is certainly a few freqs in the cel
>phone band in the test freqs that come from doing the 2, 9, l/o thing.

The test mode of the Pro-25 sets a couple of the channels to different
frequencies than the other Uniden models, and there are none in the
cell phone band as far as I know.

I am helping a neighbor lady who has obtained two CB walkie talkies from a garage sale. One of the receive crystals is bad and the local Radio Shack dealer doesn't know how to get it if I don't have the channel number. I'm not surprised at that! What I need is either a list of CB channels and freqs, of easier just let me know what channel 27.125mhz is. I had a list years ago, but have gotten out of CB and misplaced it.
Thanks in advance for any help.

Absolutly!
1) I'm NOT interested in listening to the
Bill Cheek vs {Name du jour} flame wars.
2) The purpose of that mailing list is concentrate on SOLUTIONS
and policies regarding the legal aspects of scanning.
3) Not everyone can recieve usenet.
4) Not every message posted here gets to all parties reliably.
(As proven by your exclusion of the 'alt.radio.scanner'
news group from your reply.)
5) There's much too high of a noise level here!

WOW! It would not only be impossible to slander you on this newsgroup John, it would be redundant. You slander yourself most every time you post. The handful supporting Bill was about 10 to 1 asking you and your two or three cohorts to chill out. BTW, how did Bill kicking you off of Fido become slander? I know for the other readers of this newsgroup it would be impossible to imagine why anyone would kick John off of any group for behavior problems.

> To further support my claim that several were having a problem with Bill

You really are so bold to make a statement like that. I logged on this AM to find 5 of your posts with nothing to do with scanning. Yesterday the same thing. DO you really think the newsgroup is so slow they don't notice? Is there a chance that the "bill cheek is an asshole" continued for 11 weeks because many of the posts were made by you? Naw, couldn't be, ehh?

> > why not a
> > single post from John Mackey that has to do with scanning?
>
> You will find that I have made numerous posts about scanning & technical
> issues. For example, just a few days ago I responded to someone asking
> about the worthyness of Betty Bearcat (in THIS newsgroup).

Wow, you sure got me John. One post in 6 months sure is numerous. WOW. I stand corrected. If you recall, you made over 30 posts in the last week and that is subtracting the Betty Bearcat post. You're right, 30 posts in a week and one about scanning tells it all. Sorry, my mistake. You are the RRS guru!

On the lighter side, you still might make me some money. I bet $5 that you would respond to me in less than 24 hours. I won that but the other bet that you would post at least 10 times in 24 hours is in jeopardy. I might end up breaking even. You should be proud, not everyone has an office USNET betting pool in their honor!

As a follow-up on this, I did a little checking last week. The House Ethics Committee will hold hearings on Congressman Jim McDermott's part in all this (he's the one who allegedly passed copies of the tape to the media) when it is back in session later this year. Also, the Justice Department is -still- investigating possible criminal charges against McDermott.

Which is analogous to using a modulated carrier wave to mask your
conversation with radio. In both cases, you've got to actively do
something to know what the other person is saying. If you didn't use an
envelope, it would be analogous to shouting your conversation in the
clear.

There is no software, per se. You would need a piece of equipment,
known as a CTCSS decoder. Try looking around for a company known as
Communication Electronics on the internet or in the radio mags. They
make this sort of thing.

What exactly is the application you have for this? Your explanation is
rather vague and doesn't explain what it is you wish to accomplish.

Having read Bob Grove's opinion of newsgroups, in an MT editorial some time ago, I really doubt that he bases any decision about the magazine upon what is said here. He'd be a fool if he did. Now, to me, Cheek is meglomaniacal and avindictive personality [Hiya, Bill!]; but you see, not everybody agrees with my opinion and yours, and many find his technical skills outweigh his lunacy. In this case, you merely showed you can't miss any opportunity to take a shot at Cheek.

I got a used one cheap, and have had it up for a year or so. It's a
perfectly reasonable antenna for general scanning. Lack of "gain" does
not translate to poor performance.

> Two, your paying for an antenna designed for both receiving
>and *transmitting.*

It's not like this makes it cost extra. It's a characteristic of
discones in general.

>Three, you have to modify the RS discone by adding an
>element to the top if your want to monitor low power devices, baby
>monitors and such.

It works OK on low-band VHF as-is. Of course it isn't as good as my 6
meter, 6 element yagi for low-band DXing. But then again it doesn't
take up all that space on the mast.

>Four, the damn thing was overpriced to begin with.

Yes and no. You can build a discone for $10 to $15 in parts. What's
your time worth? I got my R.S. discone used for $20. Well worth it...

2755. Where to connect these pins in FSK circuit?

Newsgroup: rec.radio.scanner
Date: 1997-07-28 00:00:00 UTC
From: whodges@pniltd.com
Message-ID: <slrn5tq0q8.2an1.whodges@atlas.dev.pniltd.com>
Source record: 190098

I am building a FSK adaptor to connect to the discriminator
tap and I am confused as to which pins the +/- 12v connect.

I am using a db9 connection. If anyone can shed some light
I would be thankful.

Below is the diagram from the poc203.zip docs.

```
0.1 uF |\ +12v
---||----------------------|- \|
AF IN | |741 \
---- | | /---------------------- Data Out
| \ ------|+ /| | CTS (pin 5/8)
| / 100K | |/-12v | or DSR (pin 6/6)
| \ | |
GND / ----/\/\/\---- GND ------ GND (pin 7/5)
| | 100K
| \ N.B. Pin Numbers for com port are
GND / given as x/y, where x is for a 25
\ 10K way, y for a 9 way.
/
|
GND
```

Les

I use ScanStar, a CIV level decoder and a Opto DC440 decoder, works good
lasts a long time. Scanner is an Icom IC-7100.

To pull off the tone you really need to pick off the discriminator
output. Have you done this. Also what kind of scanner?

Ed

It's the pine forest, more specificlly the
pine needles. They are almost
exactly 1/4 wave of the 800 MHZ signal and absorb
the energy.

Richmond county (Augusta) has some areas
where the Sheriff's office has
to revert back to the "low' band around 154-155 MHZ
to communicate - because of
the pine trees.

2768. AOR 1500 help

Newsgroup: rec.radio.scanner
Date: 1997-07-28 00:00:00 UTC
From: daviddth@lisp.com.au
Message-ID: <33db45b6.706846@news.zeta.org.au>
Source record: 190111

Does anyone know what the Ahr capacity of rechargable Ni-Cd 5 AA
battery pack in the AOR1500 scanner is.

My pack has developed a memory due to misuse over a few years (Grin)
and I have access to a commercial battery conditioning unit, but need
the battery capacity to get the most out of the unit.

I know I could make my own pack from new batteries, but the current
pack still gets about 5 hours (it used to get up to 9, depending on
how much I picked up at the time), but I want to try to get it back up
to full capacity cheaply.

I have tried AOR resellers, and the AOR websites (UK and Japan), but
the 1500 is old, and nobody wants to know about it.

Thanks for any help. Post here, or reply via email (preferred)

Glenn wrote:

Hi Glenn.

You must be fairly new to this NG.

You questioned my behavior & why Bill would kick me off.
FACT, I have NEVER been kicked off of any other Fido
echo, PLUS, I was selected to be an assistant moderator. Now
I must have decent behavior or else I would have had problems.

> I logged on this AM
> to find 5 of your posts with nothing to do with scanning.

Funny, I have not seen one single post from you about scanning either.
Sounds like the pot calling the kettle black, son.

Is there a chance that the "bill cheek is an asshole" continued for 11
> weeks because many of the posts were made by you? Naw, couldn't be, ehh?

That is right, "it couldn't be". There is no way that I could or would
keep a thread alive that long. There were an ABUNDANCE of posters
to that thread.

> On the lighter side, you still might make me some money. I bet $5 that you
> would respond to me in less than 24 hours. I won that but the other bet
> that you would post at least 10 times in 24 hours is in jeopardy.

hahaha, sounds like you'll break even. BTW- I'll swing it for you if
you
split your profit with me!!

Yes, this "new" virus is sent over the air to stop scanner listeners!!!!!

This is not limited to AR8K scanners.

I think the signal originates from those Black helicopters. After one flew over my house all of my scanners (6 of them) had nothing but 000.0000 on the displays!
It took me 3 days to reprogram them, now whenever I hear a helicopter I unplug the antenna and ground the connection with a BNC terminator.

This sure spells C O N S P I R A C Y ! ! ! ! ! A new anti-scanner law going through congress and now the total wipe clean of memory channels.

Among other ideas try a mobile scanner antenna in a closet that is near an outside wall and "slip" a 7 1/2 ft aluminum/copper tube (or as long as the ceiling will let you) over the mobile antenna. make sure it only touches the vertical element. I have had good luck with that.
That is not my only antenna, but it works pretty good.

Of course a discone will not beat a multi-element beam! But if you can
only one antenna and you want 25-1300mhz, omni-directional, it can't be
beat. Really don't need gain antennas for scanners. But if you live in
an RF hole or want to recieve something miles & miles away of course you
need a different type of antenna.
I'm suprised we didn't see the arqument over 50 or 75 ohm coax also!!

>
> Al Stern Satellite Beach FL
Alternatively u can get a pack from Scanner World, USA 1-800-476-8050 @
$32.99 + S/H or replace the individual cells like I do. I get them from
Digi-Key Electronics 1-80-344-4539 p/n P235T @ $4.71 x 5ea + S/H. Plus
having the satisfaction of doing it myself.
I'll never buy another Uniden HH until they replace the battery packs
with AA cells. The BC235xlt comes with two packs!!
Anyway, good luck!

> >assuming that it performs as advertised.

I have the BCT10 and find it more of a toy. It is useful though, just as a third scanner or something. It is not flexible and quite narrow focused on its mission (which its very good at). Its also great because its quite portable. Just dont pay full price. Ive found the BCTs at a reduced price in the electronic ads in the back of Car & Driver magazine currently about $94 for BCT10 and $159 for the BCT12 (+shipping). Im not sure the BCT12 is worth the money over the BCT10. The differences:
(anybody correct me if im wrong)
1)you get 800mhz (which is useless because the BCTs scan so many freqs, it would be near impossible to track a trunked freq).
2)you can turn off the "alert" which is irritating when you just want a scanner. Its the same as getting interrupted with a priority channel on a conventional scanner. Nice.
3)It has SWS Safety Warning System technology. I hear this is not popular with many citites and will likley die a slow death.

Considering that the BCT10 is %50 off the the price of the BCT12 its a better value. Either would be neat to have.

If you dont have an arsenal of scanners to choose from to make up for the 12 or 10s shortcomings, I recommend the BCT7. Its bigger, but its a real scanner, plus you can scan 800mhz exclusively (still impossible to track trunks...unless you program) and you get rarely seen CB freqs too. Cool! At $129-159 its quite a bargain in its class. (you still can't turn off priority or "Alert" checks, but hell, you can defeat this by scanning a bank of 100 user programmable channels anyway). The 12 and 10 also have strength meters (that actually work) that the 7 lacks.
Hope this helps!
BillyCanScan

Hello to all.
A few weeks ago I posted a message inquiring about a mod for restoring full cellular coverage for a RS pro-2032. I received an e-mail for 2 mods from someone, one which required removing one diode (3-legged?) and adding another one. The second version of the mod only required breaking a trace from one leg of a diode. Stupidly, I accidentally deleted the message before I had a chance to try the mod. So, to whoever sent the original e-mail to me, thanks for the great info...but...ummm...could you please e-mail it to me again? Thanks for your help!

>not all the time. Any suggestions?

How far are these agencies apart miles wise?

are there humongous hills inbetween?

are there swamps with alligators who may
be intercepting signals via their teeth
acting as a "blocking"...effect?

How are the conditions: Cloudy and rain
sunshine and rainbows

all these affect....

plus did you try to hook the scanner
up to an outdoor antennae and see what
goes in.....

are you between major buildings blocking clear
signals to you one time and then out in the
cow paddies the next?

or running from croc's....

bill conduit
etc.

2792. Simple MOD for PRO-25 scanner (only tested on EURO version)

Newsgroup: rec.radio.scanner
Date: 1997-07-28 00:00:00 UTC
From: Phill Hugo <plh102@york.ac.uk>
Message-ID: <33DBEB83.792E@york.ac.uk>
Source record: 190340
Cross-posted to: rec.radio.scanner,alt.radio.scanner.uk

I was playing with the keypad mods that are pretty well documented for realistic / uniden scanners and when I tried the "hold 2, 9 and lock out" one I found that it had 29Mhz as a test freq in channel 25 (I think)

This is interesting as the EU version of the Pro 25 is not supposed to cover the 29-54 Mhz band (only the US / Canada version is)

However my scanner also had freq 66Mhz in a channel to so possibly the US version will be able to access 66-88 now?

While this freq was fine in a channel, I could still not set it from the keypad myself set squelch to minimum and hit "scan up" and then put the freq into a monitor channel and then moved it from there into a programmed channel (100) and whenever I want to use that band I can just call up 100 and then hit "scan up" from there. It does not let you scan down for some reason so you may want to put various stages of the band into channels in case you fly past the req'd freq. It makes it quicker to get back to them.

In the end I set my last 10 channels to be this.. (used monitor and program to enter the freqs to channels (you cant use direct entry remember)

91 - 29
92 - 30
93 - 32
94 - 34
95 - 36
96 - 38
97 - 40
98 - 43
99 - 46
100 - 50

Because the it scans through 29 - 39.7 quite slowly I set the freqs in this range closer.

It may be possible on the US version to get at the missing band so give it a try. Also I heard that some of the older versions unlocked the cel phone freqs in this way too. There is certainly a few freqs in the cel phone band in the test freqs that come from doing the 2, 9, l/o thing. They may allow you to do the same sort of thing with them. Let me know if anyone has any luck.

Phill Hugo.

I have heard this garbage on the news groups for years, and have never had anyone show what these "Changes" are. Fact: all modern superhetrodyne receivers do have oscilators, just like transmitters, but at very low power. Without major modification, they will not transmit a signal strong enough to be received beyond a few feet. And there is always the little matter of modulation. If you have other information on how to change a receiver into a transmitter without adding parts, post it here or stop posting what you don't know about.

You can look in the very back of Police Call Plus, on the shelf at any Radio Shack. The salesdroid should be able to look up the channel and get the frequency for the crystal, or look up your frequency and see what channel it is.

It's about time conservatives put money behind their words.

If you think government is going to change at the federal level without a challenge from the local level, you're dreaming.

I will be running for Churchill County Commissioner (in the state of Nevada) in the election cycle of 1997. One of my goals is to increase the District Attorney's Office budget to include a FULL TIME Constitutional Attorney. This attorney will be challenging federal laws and regulations that are robbing the working American of their wealth.

The income tax will be the first area that needs addressing. I think there is enough documentation to rid Americans of this scourge.

Many other federal regulations will be under attack also. I have run for office twice before (paid for out of my own pocket) and I come closer each time. I have a damn good chance to get elected this time.

If you are really serious about putting the feds back within their constitutional bounds then I ask for your support. For further information, e-mail tony@aiinc.com

It's about time freedom loving Americans put up or shut up!

Really? Only been on it somewhere around 4 years or so. I wonder why you respond like a newbie. You don't respond with direct quotes, you snip out sections of posts with out marking them snipped and rarely answer the questions asked in responses to you.

> You questioned my behavior & why Bill would kick me off.

Wrong, no question, fact. Your behavior on this NG says it all. Thirty-five BS flame posts and one that mentioned Betty Bearcat. What does that say to you? It seems quite clear to me John.

> FACT, I have NEVER been kicked off of any other Fido

Lee Harvey Oswald only shot one President. What does that prove?

> echo, PLUS, I was selected to be an assistant moderator. Now
> I must have decent behavior or else I would have had problems.

Proves nothing and your actions on USENET over the last year and a half speak for itself.

> > I logged on this AM
> > to find 5 of your posts with nothing to do with scanning.
>
> Funny, I have not seen one single post from you about scanning either.
> Sounds like the pot calling the kettle black, son.

Look again then. OTOH, I never said I did, so what. You OTOH jumped up to protest immediately. Your actions not your words say it all.

> Is there a chance that the "bill cheek is an asshole" continued for 11
> > weeks because many of the posts were made by you? Naw, couldn't be, ehh?
>
> That is right, "it couldn't be". There is no way that I could or would

> to that thread.

A very large percentage were yours. Just as the 10 posts you made today show you will respond to anything. Oh wait, weren't you accusing somebody else of doing that?

> > On the lighter side, you still might make me some money. I bet $5 that
you
> > would respond to me in less than 24 hours. I won that but the other bet
> > that you would post at least 10 times in 24 hours is in jeopardy.
>
> hahaha, sounds like you'll break even. BTW- I'll swing it for you if
> you
> split your profit with me!!

Not a chance. You posted 10 today anyway. This comes from the fellow that says he would never keep a flame thread alive. Try again John, I'm not buying it. Seems that many others on this NG aren't buying it either. I have seen quite a few posts wasting their time telling you to knock off your one man act on here but I can't recall any posts asking you to continue with this nonsense. Wow, thirty-six posts in a week and only one had any scanning substance.

Glenn

2815. CHP Frequencies

Newsgroup: rec.radio.scanner
Date: 1997-07-29 00:00:00 UTC
From: Mike <drum29@lightspeed.net>
Message-ID: <01bc9bf3$17fac580$f1f671cf@default>
Source record: 190148

I understand the CHP has changed some of their frequencies. Is there anyone in these areas that can verify what frequencies the CHP is using? Is Santa Rosa/Napa on the Grape or Emerald? Is san Diego on the Orange or Orange-1? Is Oceanside/Temecula on the Gold or Tan or Gold-1 or Tan-1? Is El Cajon on the gold or Gold-1? Is Bishop on the Blue or Green? Is Bridgeport on the Blue or the Green?

These are what I understand the new freqs to be, are they correct?

Orange-1 39.40 Dispatch 42.66 Car
Gold-1 39.60 Dispatch 42.20 Car
Tan-1 39.80 Dispatch 42.84 Car
Maroon-1 42.92 Dispatch 42.64 Car

Any help anyone can provide will be greatlt appreciated.

Thanks ... Mike

We have already responded direct to an e-mail request :-)

The battery is made of 5 x AA cells, each 1.2V 600mAh.

Replacement packas are still available from stock.

Regards, Richard - AOR UK LTD

The pack used in the AR1500 uses standard AA Nicads with 600mAh rating. From memory the original packs were Sanyo produced but later ones (and those still available) are "plain" so I'm not sure whose cells are used.

You could make a pack up using 5 AA cells of higher current that would give longer life. On early AR1500 (and the AR900) the connector to the circuit board was two pin but it was easy to force this on the wrong way so later models have a three pin connector.

Hope you get thinsg sorted.

Well, 1) They didn't get them all, so in that case, it was a partialy
failed attempt... and 2) "attempt" doesn't mean failure. ... and 3)
since the pilot of the plane died on impact, he doesn't know if his
attempt succeeded or failed.

So there! Thptptptt!

Hello net friends,

Has anyone devised a mod to add more memory channels to the 400 available on the BC-3000XLT? There are scanners with more channels on the market, but none even come close to it's FAST sacnning speed which I like. The BC-3000XLT has an on-board 24LC16 EEPROM. I wonder if there's a bigger brother to this EEPROM and if so, whether the BC-3000XLT's firmware can handle the increased memory correctly. Any info would be truely appreceated.

Please email me directly in addition to posting here, so no responses are missed. Don't forget to remove the "55" from my email address inserted as an anti-spam counter measure...:-)

Thanks and best regards,
techno

I was hoping someone could help me identify the probable cause of some
strange noises. I hear them in them all over the 100 MHz region. It
sounds like "bleep boop bleeep" and then turns into garbled bleeping.
It lasts from 3-10 seconds and then stops. It doesn't happen if I
remove then antenna so I'm assuming it's source is external to the
scanner. It also doesn't seem to be my computer or television. I
thought it might be some kind of intermod from an FM broadcast station
but it's very intermittent but chronic.

Anyone have any ideas?

Hmmm, like:

"Bleep boop bop ... grchunkgrchunkgrchunkgrchunk"?

Sounds like a pager transmission tower interference.

PRO-26 with Cellular (item #vgm7227)

To bid on this item, press here

Bidding history page | Other auctions by this seller | Ask the seller a question

Seller assumes all responsibility for listing this item. You should contact the seller to resolve any questions before bidding. Currency is U.S. dollars (US$) unless otherwise noted.

Bidding starts at: $240.00
Quantity: 1
Date auction ends: 08/03/97, 08:45:04 PDT
Date auction started: 07/29/97, 08:45:04 PDT
Seller: monfeli@mail.telis.org (registered user)
First bid at: $240.00
Number of bids made: 0
Current high-bidder:
Item number: vgm7227
Location of item: Southern California
Category: Consumer Electronics

Description:

PRO-26 handheld scanner with 200 channels in 10 banks. Cellular restored, in very good to excellent condition. Buyer pays an additional $10 for priority mail shipping and handling.

Bidding for: PRO-26 with Cellular (item #vgm7227)

Bidding starts at: $240.00
The bid increment is: $2.50

The minimum bid is: $240.00

Seller requests registration

The seller of this item has requested that only registered users be allowed to bid on this item. In order to place your bid, you must register and confirm your registration.

Follow this link to become a registered user.

If you have questions about this restriction, please address them to the seller at monfeli@mail.telis.org.

Binding contract
Important: placing a bid is a binding contract in
many states. Please do not bid unless you intend to buy this item at the amount of your bid.

Proxy bidding for all bids

Please bid the maximum amount you are willing to pay
for this item. Your maximum amount will be kept
secret; AuctionWeb will bid on your behalf
as necessary by increasing your bid by the current bid increment
up until your maximum. This saves you the
trouble of having to keep track of the auction as it
proceeds, and prevents you from being outbid at the last minute unless your spending limit is exceeded. Also, in case of a tie for high bidder,
earlier bids take precedence. And, keep in
mind that you cannot reduce your maximum bid at a later
date. Unless otherwise noted, bids are in U.S. dollars.

Important: If this is not your first bid in this particular
auction, your new bid can only increase your prior maximum bid amount.

Maximum bid:

Your E-Mail address

Your registered user password: If you are a registered user, enter your password to confirm your identity. Otherwise, leave this blank. If you've forgotten your password, please request a new temporary password now by following the preceeding link.

Press this button to review and place your bid:

Touted as their "Biggest Scanner Sale Of The Year",
Radio Shack has the following models on sale :

Handheld
PRO-51 $190 = $100 off being discontinued
PRO-66 $130 = $ 50 off
PRO-28 $ 90 = $ 50 off
Base
PRO-2037 $200 = $100 off being discontinued
PRO-2044 $120 = $ 70 off
PRO-2042 $400 = $100 off
Mobile
PRO-2046 $170 = $ 60 off

Note that this ad mentions that the price of the 2042 is
the "New Low Price". Could it be its replacement is right
around the corner?
This sale ends August 30, 1997. Good luck!

Strong signals,
Rich N2MCA http://www.qsl.net/n2mca/

Unfortunately, if a person did a search for "Eric Oyen" they probably
would NOT find everything because you like to use fake names. Remember
the time you posted that thing something like "ghost past", it was
a qoute of Richard Kendrick's. (Which also shows you either are to
stupid
or lack the imagination to some up with your owmn material & have to use
others!!!_

2854. Keypad tricks for the UBC3000-XLT

Newsgroup: rec.radio.scanner
Date: 1997-07-29 00:00:00 UTC
From: "Paul D." <pauldcNOSPAM@indigo.ie>
Message-ID: <01bc9c6f$24309d80$LocalHost@default>
Source record: 190187

Hi there,

I've just recently bought a new 3000xlt and I was wondering if there are any keypad tricks for this scanner. I'm a total newbie to scanning & NG's so if this topic has been asked hundreds of times, please be gentle.
I'm not looking for mods as I have the full range Euro model. Is there a keypad combination that would delete a bank of freq's at a time ? As here in Southern Ireland the police aren't too keen on people listening to them ! So a keypad trick of this sort would be handy to have if I'd the scanner with me in the car and happened to run into a police checkpoint.

Thanks for taking your time to read this. Any help is much appreciated !

The list of CB Shops is finally available for your shopping &
repair needs
all over the nation.
CB Shops listed from East to West and North to South are available
and
ready to address your needs. Some carry hard to find equipment, and

some carry wholesale parts & equipment.
Whether it's a brand new radio or an old tube type amplifier, your
chances
of finding what you need are much greater and faster with this
brochure.
Using this brochure to shop and compare will enable you to buy,
sell, trade,
and receive repair information & rates, etc. more effectively than
most
other sources.
This brochure is LOADED with names, addresses, phone/ fax numbers

of different shops, shacks, and even, shops on wheels , ready to
serve
your most common, or not so common needs.
NO tricks, NO gimmics, just straight forward information.
This brochure will pay for itself with the time it will save you
in searching
for that one shop that can accommodate your specific needs.
You won't want to miss out on the next great deal !!
Here's how to get your copy of this, fast selling , popular
brochure..........

Send $2.00 , and of course, your snail mail address
to.......
(please include your e-mail address)

(snip)

Sounds like the typical ham radio feud/ego problem common with repeater operators. You must be new on here posting such a question to rec.radio.scanner. I would suggest you go to one of the Ham radio newsgroups to get an opinion. The majority of hard-core scannist pass right on by the ham frequencies and I doubt many would be up on the regulations.

Excellent point George. YES, when helping high school age hams by loaning them a equipment to replace their dead repeater, never assume they know what they are talking about when they tell you they correctly wired their equipment with fuses & correct polarity on the power leads.

So let me be sure I get this straight. If I want to go get some heavy duty listening mikes and such, park on the street in front of your home, and just listen and listen as long as I wish, that would be ok too, right?

Curious;

I have a Radio Shack Discone up in the attic feeding to radios
downstairs with quad-shielded 75 ohm coax..... so there!

Real men don't need impedance matching for receive antennas (but that
quad shielding sure makes a difference!).

In last weeks Washingtons Post, there is a tiny article about the
following:

The cellular industry has been testing a system that has the working name of
"ScanSpam".
It works thusly:
A radio signal is transmitted that has the capability of scrambling the chip
set eprom memory of a scanner radio. It causes the scanner to go into
"pre-test" mode, in which only a technical reset by the manufacturer can
clear.
Therefore any scanner capable of recieving the 800 Mhz cell signals is
suseptible to this "attack". This special "reverse-coding" signal is, for
the most part, unaknowlegable by system recieving decomilation sensors, and
the reverse capabilities are de-engineered for integral compatibilty with
subsystem radio frequency monitoring on a radio-by-radio basis. Short of
this, consistency is mantained by a high-RF signal processing "mirror"
sub-site, which demodulates, or cancels the unintended interference to
nearly zero.
This signal can be upgraded/sent once per hour.

Please, please, please write your congressman!

You boys need to read the 6th plank of the Communist manifesto:
Government ownership (control) of Communication & Transportation.
Because Canada didn't have a Constitution like the States, the people
didn't have secured to them their GOD Given rights to receive what they
want to receive, like we in the States used to do. EH, are we all
becoming more communist daily? Vote out the Liberals that ruined your
country! (ours too!)

2870. advice wanted

Newsgroup: rec.radio.scanner
Date: 1997-07-29 00:00:00 UTC
From: John Mackey--KA0SSF <jmackey@usa.net>
Message-ID: <33DE6594.5DD5@usa.net>
Source record: 190203

We have a situation here in Portland (OR) with a person
who owns a repeater on 2 meters. It is linked with a system
that covers amny areas of Oregon, Washington, Idaho.

The NEW owner put the repeater on a hill that provides fair
coverage (at best) about 2 years ago.

Now the new owner & control operators whine/complain when anyone
monitors their repeater with a remote base. They (or the owner himself)
call the owners of remote bases listening to his repeater & threatens
law suits & the FCC swooping down for re-transmittings his system. He
states that is is illegal to re-transmit another amateur station on
a repeater without that person's permission AND says that civil
action will also happen. He also relates that the primary issue
that makes it illegal is because he callsign is being re-transmitted
without his permission. He says that is the part making it illegal.

He also states that having his signal re-transmitted on another system
is interferring with the commerce of his repeater in a non-commercial
sense & would be the basis for a law suit that he would win.

He continues to insist that the other systems linked to his repeater
are NOT breaking the law because he has authorized them to
re-transmit his callsign. He also says that the people using
2 meters to activate remote receivers to listen to his system are
breaking the law by doing it on two meters. When asked why it is
not illegal to activate a patch from 2 meters he says, "that's something
different, you don't understand".

In addition, he says that all repeater CW iding must be done at 16 WPM!

This individual is causing a lot of grief in Portland right now with
all his whinning. (surprisingly, he is an extra with a 20 yr old call!)

I ask you all the following:

1. Is it illegal to use a remote base to listen to another amateur
station AND hear that callsign of that station while listening? (this
would cause their signal to appear on YOUR output)

2. Is it illegal to have an id'er faster than 16 WPM?

3. Is someone listening to his repeater from a remote base interfering
with the non-commercial commerce of his repeater?

4. Is it illegal to have a person's callsign be heard thru a remote
base receiver without their permission?

5. Is it illegal to activate a link from 2 meters?

Personally, I have my own opinion of the answers to the above. However, I am asking you all for a second opinion.

thanks.

Source record: 190206

I'm interested to know what frequencies this modification gives.
If I know I might try it...

"
Concerning the Uniden Bearcat 760xlt, the mod for the 950xlt does work
to restore lost freq. Disconnect pin 20 of the microprocessor from the
circuit board and connect it to pin 19. I bent the pin slightly and
cut it with the scissors of a swiss army knife then soldered an 1/8
lead cut from a cap across the pins near the top of the chip. I've yet
to find any problem with this mod. But as always do so at your own
risk.
"
What frequencies does it restore???

Thanks.

Source record: 190207

>Yeah, it may be one of the best RS has sold, but it's still
>a piece of junk. Why anyone would use a discone for scanning
>is beyond me. One, it has no gain.

Well, then...I guess the past decade or so of monitoring for me
has been a total waste of time...<g>

I use a discone for scanning...the "no gain" argument doesn't
hinder me in the least - I live in an area that has plenty
of activity - and I do not require "gain" or "amps" on the
input.

The discone also performs admirably on 220mHz, 2-meter, and 440
for me, too.

SO...the discone from Radio Shack has its place for many.

And their NEW discone promises better low-end coverage.

Sure! As comrad clinton said, "I feel your pain!"
Yes comrad, the government loves you and just wants to
control you so that you will live by their ways because they are so much
smarter than us. We need them and we should bow to them and fall down
on our knees and thank our officials for loving us and wanting only to
control us. Yes, surrender you life and property to the government.
Give it your children and your money, guns and scanners. Give it your
life. In return you will be given death at the hands of a tyrant.

2879. Is Safety Warning System (SWS) dying on the vine?

Newsgroup: rec.radio.scanner
Date: 1997-07-29 00:00:00 UTC
From: Steve S <kf4nnq@hotmail.com>
Message-ID: <33DE82D3.3E4F@hotmail.com>
Source record: 190212

In another post, I read that cities are slow to incorporate SWS technology into emergency vehicles and school zones and the like. Is it worth me buying a full function SWS radar detector with alphanumeric and voice annunciators if all I'll ever need is a basic X, K, Ka, Laser detector? Any comments welcome, posted or emailed.

Steve S.

2880. FS: AOR1000XLT, AOR2500, RS-PRO2035w/full 800Mhz

Newsgroup: rec.radio.scanner
Date: 1997-07-29 00:00:00 UTC
From: gregg@plains.nodak.edu
Message-ID: <5rlg8rmnm1@daily-planet.nodak.edu>
Source record: 190213

I have three scanners with full 800Mhz coverage. The two AOR's have full 800 standard, with no mods, while the 2035 has a European display board added to give full 800 coverage.

AOR1000XLT is a handheld, 1000 channel in 10 banks of 100 channels. It is odd to program if you are used to RS/Uniden/Bearcat scanners, but is easily learned. I have the 3rd party book about the 1000xlt, but not the worthless original manual. I have box, and original accessories. Coverage is 500Khz to 1300Mhz. Also, it has 10 search ranges and many other features as well.

$275 plus shipping.

The AOR2500 is not a hand held. It covers 100Khz to 1300Mhz in 77 banks. It is really different from the RS/Uniden/Bearcat scanners and takes some getting used to. It doesn't use channels quite like any other scanners do, but instead uses memories. When you program in a bunch of freqs, it sorts them in freq order, rather than by channel number. It is supposed to scan quicker that way. Ha! It has a bfo for listening to SSB, I think it uses 64 banks for scanning and banks 65 to 77 are for search ranges. It has an RS232 connector and Scancat software will control it. This is not the greatest scanner ever made, but it does a decent job on 800Mhz without any kind of mod. It sounds like it is off freq on UHF, so I just program in stuff 5Khz lower than what it is supposed to be and ta da! I'm sure someone with a freq counter could just put the IF slug back on freq in minutes. Otherwise it works great, within the limitations of the design. I have the manual, box and accessories. I use it everyday at my office.

$250 plus Shipping

The Pro2035 is a premium scanner, one of RADSHACK's best. It was replaced by the current 2042. They are both 1000 channel units with 10 banks of 100 channels each. It has many nice features and a really good receiver. I picked up the european display board from a guy here on the net a month ago. It was a 5 minute replacement job and gave the rig a brighter display and restored the full 800Mhz range, which was missing on the stock radio.

$375 plus shipping

Email if interested in any of these scanners.

Just thought I'd let anyone who is interested know. I just bought a scanner from G&G and am more than pleased with the service.
The Pr0-43 I bought arrived promply, and was as described. It even came with extras that I was not expecting. All I was looking for was the scanner. It also came with batteries, manual, and power supply.
If any one is contemplating ordering from the, do not hesitate.

From: Tom Didier <tdidier@execpc.com>
Message-ID: <33DEB829.DD8@execpc.com>
Source record: 190215

Hi all, anyone out there heard of "dvp"?
Quick question. I have a Uniden/bearcat handheld scanner that i use to monitor our local police dept (155.655), but they sometimes broadcast using "dvp" which stands for "distorted voice pattern". they are still using the 155.655 frequency but they send the signal through some sort of box that scrambles the transmission and sends it out in a different language which causes the scanner to just pick up loud static.
have you heard of this, and do you know how i would go about figuring out how to monitor it?
my cop friend said he thought this "box" encrypts the signal and turns it into "ones & zeroes". the officers hand held radios do not pick up this "dvp" but the seargants handheld radios do, but they have to flip a switch in order to receive "dvp"
can you help me out?
if anyone knows how to figure this out please email me at

Are you aware of the live feed on the internet of the LAPD Police radio activity? It is not delayed that I know of, and maybe I will attempt to get a time confirmation in the am. Too akward to carry a puter around for use in street stuff without help from someone at home and a cell phone so maybe it would qualify as keeping citizens advised of how the police are spending their money without compromising the real heavy stuff. Not sure how they will handle it after encryption starts.

Cheers

ed
d

Have to tell one on the police for today, or maybe it was yesterday, anyway a car was in the process of picking up bagels for some dispatch office. He opened one of the doors and scratched someones car and had to call for a supervisor to come do the paper. Another car overhearing the problem did the bagel run for what must be some very nice people in dispatch. At least one is female. Now don't go jumping to conclusions here and get excited our money is being spent on bagel runs. These cars were in the field on the way back after shift and were just picking up some snacks first. You could just hear the embaresment in the guys voice when he called for a supervisor.

2888. Need info on Regency touch k500

From the FAQ article REPAIR TIPS: RADIO SHACK SCANNER RADIOS:

[...]

GRE-Built Base Models: Dim Backlight

The backlight in many base models, including the PRO-2022,
PRO-2004, and PRO-2005/6 is implemented by an
electroluminescent panel, which grows dim with use.

The EL panel used in the PRO-2005 and PRO-2006 is
designated EL-501, and is identified by Radio Shack part
#10800050. A new EL panel can be ordered through your
Tandy National parts (see above) or local Radio Shack store
and sent to your home. Radio Shack no longer sells
replacement EL panels for the PRO-2004.

Replacing the backlight is an operation which requires care
and patience. Purchase a service manual, and study the
exploded parts diagrams as you read the following steps.

Top and bottom cabinet pieces must be removed, then the
speaker unplugged from the main board. The front panel
assembly must be removed from the chassis by removing 4
flat head screws, 2 on each side. You need not disconnect
all the wiring harnesses, though you might have to unplug
one so it won't get in the way of a hot soldering iron.

Unsolder the bare ground wire soldered to a large shield on
the back of the front panel, located near the back of the
squelch control. Two ground braids must be temporarily
disconnected by removing the screws which fasten them to
the chassis. After removing the volume and squelch knobs,
you must remove 8 small screws which fasten the plastic
front panel to the diplay board.

The old EL panel is fastened by a bead of glue and two foil
type leads soldered to the display board. It's easier to
cut the two leads from the old EL panel before unsoldering.

A sharp knife should be used cut away the glue. The old EL panel can then be slid gently out from behind the LCD display.

The new EL panel can be installed by reversing the process, though I found that it is not necessary to glue the new panel. The two foil leads must be soldered using a minimum of heat. Reassemble the pieces in reverse order of disassembly.

I think the supply will work just fine. The scanner might draw
even slightly more than that at maximum volume, but since
we are talking about audio, the peak power demand will only
be brief. At average listening levels, this adaptor should
work fine!

I know you're trying to get a lot more than this, but a Kennedy Space Center freq I monitor, 463.9750, is busy all through the night with WDW maintenance service personnel. Some time ago, I heard WDW reduced power on some of its 4XX channels to avoid interfering with others, but this one sure booms out late at night.

Waco and Ruby Ridge were a song-and-dance couple in the 1960's. They took to singing about President Nixon in ways that he didn't exactly appreciate, and he kept an extensive "file" on them. In September, 1969 they were both found dead in a vat of "Jello Frozen Pudding Mix". Although Nixon was never charged, a cloud hung over his 1972 presidential campaign.

If in doubt, put your scanner inside some sort of waist pouch or even jacket pocket. Use one of those little stubby antennas for best results plus its keeps your radio low profile. If it's "hidden" like this then it could just be a walkman or portable CD player which people use in the mall all the time.

The best way to find store or mall freqs. is to walk around with a frequency counter like a Scout. You will soon have many freqs. to listen to.

Have fun.
Phil

It's probably going to die, just like it did 20 years ago. There is no
fiscal incentive to place the equipment on emergency vehicles, and I can't
see most public safety supervisory personnel deciding to add something to
their already over-priced vehicles that benefits only those who use radar
detectors.

Ray, I have a 560 too and use a 500mA wall-wart adapter. It does get warm when the radio is blasting though. Conversely, it is stone cold when the radio is off. You may just want to keep tabs on the temperature of yours. If the display lights dim when the volume is turned up it's telling you it needs more juice.

I've never heard of this being illegal.

> 2. Is it illegal to have an id'er faster than 16 WPM?

I dunno about the USofA but there is no stipulation up here as to CW
speed.

> 3. Is someone listening to his repeater from a remote base interfering
> with the non-commercial commerce of his repeater?

That's only an opinion (of his).

> 4. Is it illegal to have a person's callsign be heard thru a remote
> base receiver without their permission?

It's ham radio - you can retransmit any of it you hear.

> 5. Is it illegal to activate a link from 2 meters?

I should hope not!

> Personally, I have my own opinion of the answers to the above. However,
> I am asking you all for a second opinion.

I am of the opinion that the control op' of this linking repeater system
is far too typical of many control op's. You know, some insecure dweeb
bestowed with some kind of "power" over others - which he is
"enforcing". The problem with these types of operators is that they
get into the hobby so much that it becomes a "lifestyle". They lose
sight of reality.

Another thing. Of all the linking repeater systems I've seen/heard,
none of them are used very efficiently. Basically a waste of airspace
(and time).

I was about to say I wasn't stupid enough to park in the road in order to operate my mikes, but then it occured to me that you gotta be pretty near stupid to be there listening in the first place. So much for that.

You guys have a right to believe as you like, but don't weaken it by trying to set up rules of distance from the source.

BTW, I meant to ask, do you get any real pleasure in this? How?

Sorry to hear about it, Outlans. Here's what happened to me:

I was sitting on my front porch listening to my scanner and a
huge blimp shaped ... like ... a hot dog landed in the field across
the street from my house. It had two baskets underneath full of
"guys."

Out jumped the pansies, armed with water weenies.
They stormed my house and took my liquid dishwasher
soap, lighter, and toilet paper. On the way out of the house
they grabbed one of my HTs. Suckers.

They hopped back in their baskets and were gone before
I could say, "Hey, you forgot to take my gerbil."

Mike

Hey Lloyd,
Stop talking in that socialist code that sounds like babble. I can't
understand you.

Hi Ray,
Why don't you call Uniden (they do have an 800 number - it should be listed
in your radio's manual; or call the toll-free directory).

If you have a multimeter you can measure the current the radio draws
while its attached to your car battery. If you don't have such a meter,
I'd bet your closest Radio Shack store would be let you use one of their
demos.

The back of the radio should have a label that states how much power (wattage)
the scanner uses; use P/E=I.

Another thing that might be causing this is the Power Jack may just be bad. You can take it apart and test it to see if it is actually getting power back to the batteries or you can check through the battery compartment. Just because the unit works with the adapter plugged into the Charging Power Jack does not mean that it is not at fault. You might go to http://support.tandy.com/support_electronics/8564.html and look up the part for J303 and order it from Radio Shack Unlimited @ 1-800-THE-SHACK. Make sure you get the RSU# (Radio Shack Unlimited) before ordering. I tried to find a replacement part elsewhere and did not. You can get the exact replacement part from RSU. Good Luck.

> What is the legal requirement in California with reguards to scanners.
> As I will be visiting from Australia with a Australian Scanner...

As far as I'm aware there are no restrictions on a base unit, as long as you "Don't listen" to any portable phone transmissions(cell or cordless.) Regarding portable and hand-held units the laws vary from city to city. I live in California's central valley with dozens of big and small cities in 8 counties within a 150 miles radius. If they do have any laws regarding portables, each has it's own set of laws pertaining to where you can't be in possesion of one.

At most tourist locations you run into the same problem. Some could care less if you have a scanner. (Knotts Berry Farm, Yosemite National Park, Magic Mountain) Others will search you any time they want to.(Disneyland, Universal Studios, any Las Vegas Hotel)

Take your chances...I think the odds are in your favor depending on where you plan to go.

Hope this helps.

Rafiii

I was about to say I wasn't stupid enough to park in the road in order to operate my mikes, but then it occured to me that you gotta be pretty near stupid to be there listening in the first place. So much for that.

You guys have a right to believe as you like, but don't weaken it by trying to set up rules of distance from the source.

BTW, I meant to ask, do you get any real pleasure in this? How?

Sure it would be legal. You could use a parabolic ear to see what you
might hear. You can stand on your side walk and point a parabolic ear
at each of your neighbors homes to see if you can pick up anything
comeing through the walls. But, given the nature of democrats in
congress, they will probably outlaw all tall milk glasses so your aunt
cannot listen through the wall!

Oh no! New government rule: Federal law now states that if you are caught using your ears to listen to a conversation between two or more people, you will be imprisoned for ten years, and not less than five years and your ears will be confiscated if convicted.

Not exactly. Emilio Goldstien is a play on Emanuel Goldstein, editor of 2600, the infamous hacker magazine. I believe the name comes from a character in Orwell's 1984 (it's been so long that I read the book, I no longer remember much about it).

Since they were Democrats and committed a crime against a Republican, they were let off fairly quickly. I think they got a $500 fine, undoubtedly picked up by the DNC. If it had been a Republican taping, say Ted Kennedy porking a barmaid, it would have been a front-page, top-of-the-list story every hour on the hour until Congress "did something" about those "horrible scanners". OTOH, since most of the journalists and commie-libs love monitoring and controlling people, it didn't receive a whole lot of attention after it first broke, heh.

Have a look at www.steaksandwich.com

It's a multipurpose decoder, DTMF, EIA, CTCSS and numerous others. I've
had excellent results using it, simply buy hooking my scanner up to my
soundcard, even without using a descriminator output.

John

I use a 6 meter J-pole. (Think KLM but not sure) Unlike most of the other antennas mentioned it has low angle pattern (w/o radials). This is quite helpful for the stuff you want to listen. I have a 20/10/0 db in-line switchable pad between this antenna and the scanner. The antenna works so well for the Freq's you asked about that without the pad it's hard to scan. I scan with the 20 db pad clicked in. When it stops on something I click the pad out and hear a noise free signal.

Came across their comm freq over the weekend. This group takes high perf single engine aircraft (Marchetti military trainers) and flies clients into dogfights in the air. Clients take controls of planes and are allowed to perform loops, rolls, up to 5~Gs, etc. They are in SEattle for the rest of the week flying over Mt Si area; based on Boeing Field near Galvin FBO. Comm frequency 136.7mHz where you'll hear gross grunting as they pull Gs, set up for their fights, listen as they approach target acquisition and fire laser weapons ("hits" trigger smoke entrail from downed aircraft). Afterwards, they take clients through hammerhead stall, loops, etc for a few thrills before returning to the earth. Videotaped from about 4 on-board cameras. Kinda fun eavesdropping....especially when you're stuck at work.

In all likelyhood it will have enough currect to run a scanner. If not
it just wont work right! You can buy those little wallwarts for under
$10. Be sure to check you +/- before you connect (theres almost always
a blocking diode to prevent reverse connect).

Ray, I thought the 200ma sounded a bit low and I just glanced at the little wall wart power supply that came with my Radio Shack scanner and it's rated at 500ma at 12V so you might want to get a bit heftier wall wart supply at the Shack or the next swap and shop.

: duty listening mikes and such, park on the street in front of your home,
: and just listen and listen as long as I wish, that would be ok too,
: right?
:

Nope. You'd be blocking traffic.

Besides, I'm not sitting in front of your house when I listen to you on a cordless phone or cell phone. With a cell phone, I could be miles away. With a cordless phone, I'm probably a block up the road.

If you can listen to me in my house with fancy mics and stuff like that from the same distances - god bless you. Have a party.

The point being if you send a signal through my home - I'm listening.

Tom,

It's called Digital Voice Privacy, and because it turns the signal into digital (0's, 1's), bits of info, there is no way of decoding it unless you have the same code programmed into a radio with a DVP board.

There are thousands of possible codes to program...

Good luck,

Rob

Lloyd, Lloyd.......

There is one thing about you. You will always support
the current gov't view's on things. Anyone who disagrees
will be called a name such as racist, homophobe, sexist,
etc. You and other liberals consider the gov't being good
and deserving to be worshipped like God. Gov't unchecked
like the current Klinton administration is only bad.
Remember the phrase, "Absolute Power corrupts Absolutely !".

If you were around during the time of Nazi Germany, you
would have been one of the people supporting Hitler.

The statement by Sarah Brady is true.

2990. WANTED: Long Island Scanner Listeners

Newsgroup: rec.radio.scanner
Date: 1997-07-30 00:00:00 UTC
From: Keith@unix.asb.com
Message-ID: <EE58qp.5A3@nonexistent.com>
Source record: 190036

LITT is now a Mailing List for all LONG ISLAND SCANNER LISTENERS,
This list is a REAL TIME Mailing list that means as soon as you post a
message to the list, it is relayed to all on the mailing list. This would be
good for Alerting other Scanner listeners of ACTIVITY that is going
on at the moment..

This list is open to:
Scanner Stuff, TT ID's , Vhf-Uhf TV DX , Am-Fm Radio DX ,
Satellite TV (I have 2 Satellite Dishes), SWL, and any other interests..

Also I Setup an IRC ChatRoom (Internet Relay Chat)
for the LI Scanner Listeners to Hang out in and Discuss Stuff, that we
could us this room for Q/A for the LIMA NET (for non - Hams)

LIMA NET is Tuesdays at 8pm on 146.805 Mhz (Ham Radio 2 Meter Repeater)

Users would need to have a Internet Connection, (ie. AOL or better) and
a IRC Software (ie. Mirc , Pirch , WS-IRC).

I use a GREAT piece of Sharware for the IRC, its called MIRC
and its available for Win 3.1 and 95..You can get it at:

http://www.mirc.co.uk/get.html

If you dont have Windows, and have a Mac or something else, you can
TELNET into the IRC SERVER..(see below for more info)

I set up a room on the DALNET IRC Server, u can get
more info at :

Http://www.dalnet.com

Here is what you need to find the room:

IRC Server: hebron.in.us.dal.net (irc.dal.net .. is good also)
Room Name: #LITT

If tour TELNETTING IN use:

Telnet://telnet.dal.net (use a LOGIN: dalnet with no PASSWORD)

Enjoy,
Keith

Sounds like an internal problem, maybe blew the front end..
Did you try another antenna first? The BNC connector can sometimes wear and the center pin break or bend. Also the connector on the scanner can be damaged.

Did it quit soon after a lightning storm? A close strike can generate spikes that can blow the input section or other components..

If you read between the lines, the government we live under
is not too much different than outlined here. This was probably
meant to be cynical, but in reality the things we put up with
every day is similar. There are some things outlined in the "agreement"
that have not yet happened, but are in the works, such as
the "Government ID number" for all transactions.

I could outline each point and tell you how it relates to what
we are already doing, but since this is a CB newsgroup I will
not waste all the space. In closing, everybody take a good hard
look at what this government has done behind our backs in the
last 25 years. If we let it continue for much longer, this
"contract" will not be as far-fetched as it sounds!

The above applies to the authorities who feel it is their right to
nose in on everything we do, run every aspect of our lives, and
control everything just because they have a particular kind of job.
They think the general population has no idea what is going on, but as
far as I can tell, police, politicians, etc., come from the public and
have no extraordinary powers of perception or intelligence.

Can you put up lightning arrestors? I mean, who would notice if you had three lightning arrestors, unevenly spaced and not at all the same length! How about a flagpole? Maybe a plant hanger? Put up a bird feeder and tell your neighbors that the discone is there "to keep out the squirrels." Perhaps put in a fountain and have the antenna as the peak of the fountain, suitably waterproofed. A beam antenna could also be made with very thin wire and attached to the side of your house, fed from the appropriate area. No one says an antenna has to be commercially produced! My stepdad, ex-Navy, ham operator, etc., uses a simple piece of wire on his PRO-2004, but I don't know how well it works.

Never mind what we think. Ask this fellow to quote chapter and verse
from Part 97 backing up his allegations.

Whatever is not specifically prohibited is permitted. I've been
monitoring repeaters on my remote base for many years. The only point
he MAY have is the part about using two meters. You need a control on
an authorized frequency, plus some sort of ID on the repeating device.
Other than that, I'd say he's full of you-know-what.

Nope, but I doubt that you had a good address on me. I heard he was selling out (again or is it still?). Is that what you mean or did the State of Oregon lock him up for being and idiot without a valid license? :-)

> Anyway, it appears unfortunate that you are right with regards to
> your fued/ego comment above. I am soliciting opinions from a wide
> range of people & have already seen a wide range of answers.

I would have to say that retransmission of a hams anything isn't squat. None of the telecommunications laws old or new relate at all to ham radio other than you can monitor and talk about it without breaking any laws. I find it humorous when I hear these stories about hate and discontent on the repeaters. I also feel lucky that the repeaters I use have never had these problems. Guess we up here in Washington are just too mellow. Only problems we ever have is when fools from Oregon pass through raising hell on the systems. Then we just go to SSB simplex. Not totally true though. Just recently had some fellow using the 2 meter input as a link to a 440 repeater. When we asked about it he was confused as hell as to what he was doing and how we could hear him on two. Real brainy!

Regarding your problem with AES:

I can tell you that I have spent (literally) thousands of dollars with
this company, order-
ing for myself and other friends and I can honestly say I have NEVER
experienced trouble with them. They are courteous, prompt and I usually
get my order within a day or two at the outside.

I would strongly recommend that a.) You give them an opportunity to
explain and make it right and, b.) You be cautious in posting negative
things like this without fully exploring the reasons with upper
management.

We are all forced to deal with delays at times, but this does not
constitute a "bad" com-
pany and your admonition to "beware" seems a bit hasty. Give em a call
and talk to the front office, I am sure they will stumble over
themselves to make it right.

Gentlemen:

In the State of Michigan (at least) you must carry a copy of your
Amateur Radio license with you if you have a vehicle equipped with
radios capable of receiving Police frequencies. This, according to the
Director of Communications with the Michigan State Police, only
strengthens your case to have it. I also have obtained a letter from
the Director (written to the officer who may stop you) telling him of
our rights, with a copy of the law on the reverse side.

In short, no need to piss off a sleeping dog, here. If he wants to see
it, as a matter of determining your right to have the radio, give him a
peek-and maybe you can elmer him into the hobby! =)

local police who make up their own rules...

when it comes down to reality: calif laws take precedence

if a local law violates a state law the state law is
in effect. No matter what the cops try to do. They
can take your scanner away and seize it illegally and
it's the state law that a lawyer uses to sue them.

just as with me doing news video or stills: some cop
tells me I cannot and i tell him to go strip his mother
and he takes my cam and destroys the film or wrecks the
video....that is illegal. Calif law says he cannot do
what he just did.

Besides they know this already. Local principalities come
up with all sorts of "unwritten laws" to keep their bluff
going. I get it all the time when accessing a news event
and they get "their attitude" about entering.

What they are doing is illegal. There is a state law
that states that I am allowed in.

Again, they know it's legal.

In addition to the other posts you have to make a call with the phone.
It doesn't transmit until you dial. You may also as stated have a 900mhz
'fone that uses spread spectrum technology. You won't be able to pick
that up.
Good Luck.
Don :-)

That pretty much says it. The beauty of triple conversion is the great
reduction in images. I would never buy a double conversion scanner just for
that reason. I suppose they are OK in a low RF environment but they stink
otherwise.

Source record: 189759

So those silly legislators in sacramento criminalized listening to cordless phones.

That's funny, you can still buy those 49MHz "CB"s at radio shack? Doesn't RS know they're illegal now?

Ok ok, so Sacramento really outlawed "malicious interception" let's be real, if your neighbors get pissed off at you, it's "malicious".

So regardless of where you stand on the scanning issue, the other users of the 49/46 MHz citizen's band have be de-allocated by the state. I suppose radio remote control is still allowed (by california, not the FCC).

Come to think of it, where do those baby monitors operate?

With stupid laws like this, is it any wonder that nobody takes scanner bans seriously (just don't get caught). Psst! I've got some excellent weed...

Edward,

Check out my WEB page at http://www.geocities.com/SiliconValley/Way/1522
for info on how you can build a computer control interface for about
$12.00. This works in many scanners, but the page specifically shows how
I installed it in my 2032. Let me know if you will build.

FYI - PCBs and plans for a serial interface version are on the way.

3035. Vancouver/Clark Co. WA's NEW Trunking system

Newsgroup: rec.radio.scanner

Source record: 189766

All,

Recently there has been a lot of local press re. the NEW Vancouver trunking system being brought online. This is NOT to be confused with the existing Portland/Vancouver system, it is Vancouver / Clark County's own system. The NEW system will allow Portland users access, Wa. Highway Patrol access and also has MDT capability. It is supposed to be totally online by October, installations/training are going on now.

What I'd like is the frequencies used/to be used, talk groups, etc. Please post to this groups and EMAIL me if you have any info.

TNX and 73,
-barryc

"Clean" the EPROM?

You've got to be kidding.

The only way to "clean" an EPROM is to expose it to UV light for a
period of time commensurate with the byte capacity of the EPROM, then
re-burn the program into it.

Try again, fellow!

As you will see from the other postings, you are going to have to
replace the display (only if you want the light to work). After doing
so, I would recommend that you modify the display light switch so it has
an off and on function. I've done this to all my 2004/5/6's.
Good monitoring;
Don :-)

An interesting thought....until recently, the spectrum was considered
to be in the public domain, allocated for specific usage by
International Treaties and in this country by the FCC who also
monitored its proper usage. Until recently. Congress has now
decided that the spectrum is now longer a public asset, and is in
the process of auctioning the spectrum to the highest bidder, to
be used in ANY way or fashion or mode desired. This makes that
spectrum PRIVATE, and all the commercial bidders are asking is that
their PRIVATE spectrum (most frequencies, untimately) be protrected
from snoopy taxpaying citizens who did not win out in the bidding
process.

3057. TAUZIN INTRODUCES BILL TO PROTECT CELLULAR CONVERSATIONS

Newsgroup: rec.radio.scanner

TAUZIN INTRODUCES BILL TO PROTECT CELLULAR CONVERSATIONS

WASHINGTON -- Rep. Billy Tauzin yesterday (July 30, 1997) introduced legislation to toughen wireless privacy laws by making it illegal to modify scanners to intercept cellular calls and to divulge any information from those calls picked up covertly.

The Wireless Privacy Enhancement Act would build on the current law, which only prevents the manufacture and sale of scanners capable of eavesdropping.

"Those laws are inadequate ... and inadequately enforced," Tauzin said at a press conference July 30 announcing the legislation.

The new bill came about after a round of hearings in Tauzin's Telecommunications, Trade and Consumer Protection Subcommittee that showed how easy it is to modify scanners to pick off cellular calls and how this breach of privacy is affecting groups such as the Federal Bureau of Investigation (FBI) in its investigation of the crash of TWA flight 800 over Long Island. Tauzin said the FBI was forced to abandon its cellular phones because reporters in the area were using scanners to intercept the transmissions.

The proposal also would give the Federal Communications Commission (FCC) the authority to enforce the laws in civil court without the Department of Justice's approval.

The Cellular Telecommunications Industry Association (CTIA) commended Tauzin's legislation. "Chairman Tauzin should be congratulated for his efforts to protect private communications, and for making sure that appropriate federal agencies have the guidance and tools to investigate and prosecute high-tech violators of basic human rights," said CTIA President Thomas Wheeler.

You're an idiot. Bush was President during the Weaver incident. Most
of the officials in charge when Waco started were Bush appointees.
Congress has no authority in administrative matters, and so cannot be
held directly culpable in either incident.

Now take this thread to alt.braindead.limbot where it belongs.

I not sure of that!!!!
They advertise a free case with one of their scanners, and I cannot get
them to ship it!!

Are you disputing that the Soviet Union was socialist? Try Political
Science 1A Lloyd.
> : 3. Socialism unchecked by individual freedom becomes tyrannical
>
> Individual freedom without any concern for society becomes anarchy.
Gee Lloyd, wouldn't you feel more at ease living in one of those
wonderful places like China, North Korea, or Vietnam where they don't
give a shit about personal freedom. Maybe Castro's worker's paradise of
Cuba is more your cup of tea.

3063. PRO-2045 vs PRO-2041

Newsgroup: rec.radio.scanner
Date: 1997-07-31 00:00:00 UTC
From: cdeviney@intellinet.com
Message-ID: <5rqn9j$n1e$1@fortune.ipa.net>

Has anyone done a comparison?

Recommendations?

2045 = $250

2041= $299

Does the 2041 have rotary tuning, channel counter, CTCSS option, etc?

Has anyone tried it with Radio Manager for Windows?

What is the legal requirement in California with reguards to scanners.
As I will be visiting from Australia with a Australian Scanner that can
recevie Cellular Freq. Scanner freq is 66-88, 108-174, 406-512,
806-966Mhz. Scanner Netset Pro46 (Tandy)

Thanks, Paul

This is digital type aka DVP, DES, DES-XL etc..

It can not be decoded like voice inversion with out the proper code
key for the system.

Go in to a Radio Shack dealer and look at their wall plugin type power supplies. I'd recommend one capable of 800ma or more. Be sure to get right size plug and POLARITY. If that little 200ma supply you have works, it may be running hot and posing a possible fire hazard. Inadequate current won't hurt your scanner, it just won't work well, or at all.

As best as I am able to determine, triple conversion is supposed to reduce
false images and birdies. While this is good for most purposes, it doesn't
lend it self well to listening to off frequency transmissions.

I am new to this but here is my question:

On my old BC200XLT I can hear all kinds of cell images (high 800, low 900). I just bought a PRO-2045 on clearance from Radio Shack for $250. I get almost no cell phone images (a few 860-868).

Do I need a different antennae or what? I put the antennae from the 200XLT on it, but no change.

Or do scanners with triple conversion not pick up cell images?

Where were your complaints when the other commercial posts were made on here? I know, you were up on rec.radio.amateur asking if you could hook you scanner to a TV antenna without harming it! Did you ever figure that one out Petey?

I do have to admit that Bill posting on here is annoying. Every time he does some jealous net monkey like you crawls out from under his rock and begins to whine. Face it, one of Bill's posts contains more technical information than all your USENET posts put together. Case in point, if you had read his post on using a TV antenna with a scanner you wouldn't have made a fool of yourself asking if using one would hurt your scanner. Bill has posted it a number of times but you still couldn't figure it out. Shut up and go teach you little kiddy piano lessons, that is your place boy, not here rambling on.

Have been checking around for a Trunk Tracker and have seen quite a divergence of prices.

Grove is asking $300 (inclues an Austin Condor antenna) and says they have them now. Ace Communications is asking $259, but there is a 4-5-6 week wait.

Anyone come across the optimum situation: Low price and immediate availability?

>The statement by Sarah Brady is true.

Lloyd is a sidewalk sissy liberal. Like most liberals, he has trouble seeing the difference between emotion and logical thinking. His actions, thoughts, and beliefs are based NOT upon facts and logic, but emotion, suppositions, and scare tactics. Case in point:

"Gun owners want to create a Wild West mentality".
WRONG!!

Guns, knives, chains, automobiles, cigarettes, alcohol, radios, TV sets, VCR's, PC's, toilet bowls, cooking utensils, light bulbs, etc. ARE NOT RESPONSIBLE FOR CRIMINAL ACTIONS! Now anyone with common sense would realize that it is the MIND of a person that is in error, NOT some inanimate object (like the aforementioned). But the liberal mind cops out and blames the first thing that can't fight back. This feeling of omnipotence gives the liberal a further ego boost, thus reinforcing the warped thinking process.

But people like Lloyd Parker, Sarah "Sickle and Hammer" Brady, Comrade Crook Klintax, etc. have been condtioned into believing that personal responsibility is part of the "Wild West" mentality. They think we need to have someone constantly monitoring are evry move, so we won't get "hurt". And we need not worry about our own well being, we are all provided for.

Yeah, right, Lloyd...and I've got some oceanfront property for sale in Idaho! Get real, you (like most commie-libs) haven't a clue as to what the TRUE motive behind the current administrations policies are. You'll learn soon enough.

By the way, I wonder if some of this crap you spout off was burned into your head down there at Emory? If so, that really tainted my image of that school. You need to get back in touch with the truth, pal. You're reality check has bounced many statements ago and remittance is well overdue!

See ya,

Erik Bagby

First, check your local laws to ensure that there are no communist rules against mobile or protable scanner use. Secondly, while I perosnally have never had a problem with a 2-way or scanner in stores or malls, keep this in mind. Malls, stores, restaraunts, and other businesses are not publicly owned. In other words, they are private property, and managment or staff can have any rules they wish regarding anything on their premises.

They can ask you to discontinue use of such device and request that you either put your scanner/radio in your vehicle or leave the property. This is their right, they own the property. Just like you can decide who does and doesn't enter your home and what they can do while on your property. However, they CANNOT take your scanner/radio (that's theft by taking in Georgia) or badger you with questions. They can merely ask you to leave. If you fail to leave, however, you can be charged with criminal tresspassing.

I heard once where a fellow ham brought his VHF portable to Six Flags over Georgia. Their security department detained him, questioned him, and even confiscated his radio. I told him he had a hell of a lawsuit for false arrest under color of legal process, a felony in the state of Georgia, even thought the security guards were off duty Cobb County Police officers. Their authority ends as cops as all they can do is A) check the radio through GCIC/NCIC for stolen, and B) ask you to leave.
My friends big trip was "nowhere was it posted: no radios allowed". They don't have to, it's private property, I replied.
But, they cannot take it from you or detain you, all they can legally do is request you leave.

Well, interestingly enough, next season he and I went to Six Flags, and on the back of the parking decal it specifically stated :

NO 2-WAY RADIOS, SCANNERS, OR PERSONAL LISTENING DEVICES (walkmans, radios, etc) ALLOWED

Have fun!

The DJ-X10 has not yet been certified for sale in the USA by the FCC.
Last I heard approval was expected August or Sept. 1997. Keep checking
Alinco's site at www.alinco.com for status.

BTW, Ham Radio Outlet is quoting a MSRP of $850, with the "real" price
"TBA".

3087. FS: UNIDEN MR-8100A scanner....

Newsgroup: rec.radio.scanner

FOR SALE: UNIDEN MR-8100A mobile scanner. These units were designed for the California Highway Patrol and were sold in limited quantities a few years ago. They cover up to 1 GHz (including CMT) and are programmable from the front panel or by computer. There are 10 banks of 10 channels each and the display is alpha-numeric. The turbo scan mode is very fast.

This radio was never used mobile and thus is in near mint condition. It comes with the original mobile external speaker, programming software, scanner and software manuals, etc. Price is $250.00 plus UPS or other shipping method of the buyer's choice.

If interested please reply by e-mail.

I have monitored the Orn/Gld/Tan-1 in use in SD County using 162.2hz
CTCSS for quite a few months now. You only need to monitor the 39mhz
freq as the base and mobile are repeated on it as opposed to the old
system. Haven't heard or seen anything on the Maroon-1.
Good Monitoring;
Don :-)

F O R S A L E

(add shipping to prices...)

MOTOROLA MTX9000 fm handi-talkie radio,
model H01WCF4DB5AN NX type WCMA.
900mHz range. With charger and info.
Only $499.

..... FOR YOUR DRIVING PLEASURE .....
1929 Mercedes SSK kitcar on VW chassis. Just completed, never titled.
Yellow, with brown fenders and running board, tan convertible top, side
curtains, and tonneau cover. Gold trim instruments.

COBRA 18-ULTRA CB ---- 40 channel, pushbutton tuning, with 3
NOAA weather channels. Includes microphone, but no mounting
hardware. $ 35.

LEXMARK/IBM PORTABLE PRINTER 5183 ---- powered by rechargable
battery or AC wall adaptor (included), this printer is only
11.5" x 3.5" x 2", and weighs about 2.5 pounds with battery
in place. Using silent thermal print head, it will print on
either thermal fax paper or on regular paper using the enclosed
thermal transfer ribbons. Very quiet in operation, and because
it runs on a battery, it is completely portable, for use with
laptop computers anywhere. Includes parallel port cable. $89.
.

------------------- F L A S H L I G H T S ---------------------

4-D cell (2x2 style), krypton bulb. In box, never used.
$5 + shipping.

6-D cell multifunction lantern. Sleek tubular style with
bright incandescent light at end, 6W fluorescent bulb
along bottom, and flashing red and yellow on top. Also
has electronic sonic alarm that can be switched on with
the flashing lights. In box, never used. $12 + shipping

3-C cell Eveready worklight-style. Bright yellow with
hook for hanging, frosted bulb to diffuse light over area.
Unused, but no box. $5 + shipping

Batteries NOT included.....

COCA-COLA caps. Red cloth, white lettering. New.
$8 each + shipping. Only 9 available.

add shipping to all prices, only in US....
if interested, leave e-mail...

Sounds like receiver intermod. The energy from your mobile radio is
getting into the front end of the scanner, causing the electronics up
front to act like a mixer. The local oscillator is your portable radio,
the received signal is the cellular signal, and the difference falls
at the frequency your scanner is tuned to.

OK, I've been seeing that statement now for several years, but nobody can show me an original source for it, or any other proof that it's a real quote from Sarah Brady. Supposedly, it was printed in Machine Gun News, but that's hardly a reliable source, unless the reporter was present when the alleged statement was made, and reported it accurately and in context.

I challenge any of you people to give me a reputable source for this comment, preferably one that I can check on the Web. I'd even settle

for a valid e-mail address for Ms. Brady, so I can ask her myself.

Last time I did a web search on this topic, I found NOTHING that could be construed as a first-hand source.

Until somebody comes up with some credible evidence, I say the "quote" is fraudulent.

Oh, horseshit. The Republican who stood up in Congress and illegally
modified a scanner and illegally monitored a cellphone conversation
got no penalty at all, nor did any of the people who leaked the
conversation or published and broadcast it all over the world. Those
people broke the law, too, you know.

Wake up and smell the coffee, kid. There's NO essential difference
between the parties, and they only exploit your blind partisanship to
further screw you over.

I have a discone mounted up 40 ft using low loss RG-213, big cable tough to work with but the price was right, it is the difference between night and day, to improve lower end reception I adapted a firestick mobile CB antenna and screwed it on the top. I have heard a tapped out GM antenna will work also.

I would like to get a directional antenna so I could zoom into certain signals. I have heard TV antennas mounted vertically do pretty well. Has anyone tried this and how are you using the 2 antennas, i.e. rf switch or combiner, also are there ready made baluns from 300 ohms to 50 ohms impedance.

living off the ether of others, ;)

I just bought a pro-51 from Radio Shack today. After playing around with it for a while i realized I could pick up cellular phones on it. I thought that radios couldn't be made with cell phone reception anymore.

Is it possible I bought a radio that was made before the law went into effect?

Any ideas would be appreciated.

The quote may or may not hold water, but one thing is certain: Sarah Brady has a goal of ending weapons ownership in the USA. For that reason alone, we should fear he big government ideas, rules and regulations.

HOW DO YOU FIND THESE SCANNER FREQUENCIES?

by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in part on CDROMS, in bulletin boards, networks, or publications which charge for service without permission of the author. It is posted twice monthly on the USENET groups rec.radio.scanner, alt.radio.scanner, and rec.radio.info. It is also available electronically from the rec.radio.scanner ftp archive on the official USENET FAQ library ftp://rtfm.mit.edu/pub/usenet-by-group/rec.radio.scanner. The author writes a monthly "Scanner Equipment" column for Monitoring Times magazine, published by Grove Enterprises, but views expressed in this article are his own.]

I am often asked, "How do you find these frequencies?"
This article answers the question in various sections:

Books
Magazines
Government Records
Web Sites
Federal Radio Stations
Radio Clubs
Do Your Own Sleuthing
What Makes Station Identification Difficult?
Examine the FCC License on Premise
Examine the Labels on Radio Equipment
Equipment to Determine Frequency Usage
How Can I Determine To Whom I'm Listening? - An Example
Summary
Addresses

Books

The most convenient source of fire and police frequencies is the Police Call Plus, published each year in 9 regional volumes by Hollins Radio Data, and sold at Radio Shack and larger book stores for under $13. Police Call Plus is

basically a computer printout of FCC license information in the fire, police, local government, and conservation services in two lists: by licensee name within state, and by frequency. A few pages of local airport and nonsensitive federal government frequencies are included. Selected business frequencies are listed, too, but without callsigns and other details.

I highly recommend Richard Barnett's 1992 book, Monitor America, published by Scanner Master Corp. A 3rd edition is available from Grove Enterprises for about $30. It is crammed full of police, fire, local government, news media, sports, national park, and commercial broadcast frequencies for all 50 states. The information was compiled mainly from members of the Radio Communications Monitoring Association (RCMA), now defunt. Monitor America contains detailed communications system profiles and precinct maps for major metropolitan areas. Police and fire radio codes and unit identifiers unique to local agencies are listed for several cities. This differs from Police Call Plus, which gives a more sterile, but uniform treatment of licensees, listing even the smallest of towns.

Scanner Master also publishes regional frequency guides for Illinois, Florida, Virginia, Massachusetts, New Jersey, and other states.

Aeronautical frequencies are covered in the Aeronautical Frequency Directory, written by Bob Coburn, W1JJO. Although most of the information is about civilian aviation, Bob included sections on military mid-air refueling and CAP. The 401 page third edition is available from Official Scanner Guides (P.O. Box 525-NS, Londonderry, NH 03053). The same publisher sells the Maritime Frequency Directory and frequency guides for several New England states. Some of these books are available through Radio Shack, too.

The longstanding source of sensitive US government frequencies is still Tom Kneitel's Top Secret Registry of US Government Radio Frequencies. Published by CRB Research, the 8th edition is available from Grove Enterprises for about $22. Kneitel's book contains frequency listings for NASA, military, FBI, Secret Service, DEA, IRS, Border Patrol, arsenals, ammunition plants, missile sites, and others in the 25 to 470 MHz range. Since the US government no longer offers frequency information for its own stations, and has never published sensitive frequencies, most of the information in Kneitel's book has been collected from listeners over the years. It is certainly not complete, nor 100% accurate, but is a good

book for this difficult to obtain information.

Tab Books Master Frequency File, first edition, written by James Tunnell and Robert Kelty, lists federal agencies and frequencies and deserves a read. However, there are no military listings and many pages are devoted to appendices and references which contain no frequency listings. The space would be much better used by a combined federal frequency list sorted by frequency.

Magazines

Although national in circulation, local frequency information is sometimes available in Grove's Monitoring Times and the sensationalistic Popular Communications magazines.

Government Records

Every year, the US Government sells FCC license information, in the form of microfiche, floppy disk, and magnetic tape, to the public through the US Department of Commerce National Technical Information Service (NTIS).

These lists contain license information for the industrial (e.g. Illinois Armored Car, Pinkerton's Security, Joe's Towing, etc.), highway maintenance, commercial broadcast, aviation, common carrier, and maritime services, as well as for police and fire. For more info call NTIS at 703-487-4630.

Back in "the good old days," Grove Enterprises sold copies of some FCC microfiche files, and this was much cheaper than buying directly from NTIS. Grove no longer sells microfiche, but sells information on CDROM for $100 instead.

The FCC has an agreement with PerCon (tel. 716-386-6015), a private company, to sell FCC license information to the public on both floppy disks and CDROMs. You can buy the full license information for a multi state region or a less detailed license database covering the the entire USA on CDROM for about $100.

The PerCon Spectrum CDROM sells for under $30 and contains a handful of fields for every FCC license in the US. However, Public Safety license information contained in the Winter 1996 Spectrum doesn't appear as up to date as in the 1997 Police Call Plus.

Spectrum works in DOS, Windows, and Mac environments. One can try restricted sample searches of the Spectrum CD for free via PerCon's web page at

http://www.perconcorp.com/db_srch.htm .

Companies have appeared which are "plugged into" the FCC licensing system and they sell computer time allowing on-line file access. They also sell paper copies of FCC information. Washington Radio Reports is one example. A monthly publication, it lists license applications made to the FCC. A few members of my scanner club subscribe and share the information with me.

As I have already done for hundreds of radio enthusiasts, companies, government agencies, and organizations across the country, I will locate FCC licensed and selected FAA and CAP transmitter sites in an area of your choice, in any state, and produce a custom RadioMap(TM) report, including a beautiful 8-1/2" by 11" scaled color map, protected by plastic. The map is marked with transmitter sites, cities, highways, airports, military installations, national parks, etc.

The graphical nature of RadioMap allows you to identify antenna sites and visualize the transmitter locations in your neighborhood, near your office, and other places of interest -- from VLF through microwave. The report lists frequencies, callsigns, and licensee names. RadioMap covers police, fire, local government, TV, business, industry, common carrier, railroad, trucking, and many more types of transmitter sites, excluding ham radio stations. Wireline and nonwireline cellular phone and AM/FM broadcast transmitter sites are clearly marked using unique color icons.

Industrial customers use RadioMap reports to survey the "radio environment" prior to installation of radios and wireless microphones at customer sites. RadioMap is used by the maritime and broadcast industries, as well as ham radio operators to solve intermod interference problems, and has been very favorably reviewed in RCMA Scanner Journal, American Scannergram, and USSN.

The RadioMap processes and software are unique and proprietary. Unlike "more tame" maps, RadioMap shows the locations of military bases, ammunition plants, arsenals, weapons factories, and other military installations.

For a flat fee, you choose the center location, and I choose the range, depending on transmitter site density:

suburbs: 5 mile range (100 sq. mi. area)
rural areas: 10 or more miles (400 sq. mi. area)
dense urban area: 1 - 2 mile range

Longer ranges for additional charge - call for pricing.

A custom RadioMap report costs $24.95 plus $5.00 shipping and handling. For an additional $5.00, I will include a custom frequency allocation histogram, a 0 - 1,000 MHz "spectrum analyzer-like" display showing spectrum usage by the transmitters in the map coverage area. Send check or money order payable to Bob Parnass for $29.95 for standard or $34.95 for deluxe RadioMap report with histogram. Include your name, address, and telephone number, along with center location (nearest intersection of 2 streets, or latitude & longitude) and mail to: Bob Parnass, 2350 Douglas Road, Oswego, IL 60543. tel. (630)554-3839 6-10 PM central time. For a brochure, send SASE.

Web Sites

If you have access to the World Wide Web, you can visit dozens of sites with local frequency lists.

Federal Radio Stations - Not Licensed by FCC

Since federal government radio stations are not licensed by the FCC, they are not listed in FCC microfiche. In 1981, a group of 60 radio hobbyists split a $1300 fee, and obtained 80 microfiche cards of 'sanitized' information about federal government radio stations under the Freedom of Information Act (FOIA). (See "The Government Giveth, the Government Taketh Away", by Richard Prelinger, in Monitoring Times, July 1982.)

Only 12 of the 21 information fields for each station were furnished. Fields like "Remarks", which indicate the exact usage of a channel (e.g. "Sky Marshall's Net"), and "Bureau", indicating agency subdivision (e.g. TAC within the USAF), were withheld. These 80 pages of microfiche were sold by Grove Enterprises for $25, but are no longer available from that source. Private entrepreneurs have been known to ask $125 or more for a set! In a step backward, the US Government insists it will no longer release this type of information - it is now 'classified'. (See "AFIO and the FOIA", by Bob Grove, in Monitoring Times, September 1982.)

For a reason unknown to this author, the government released a 1984 vintage set of frequencies allocated to the FAA. Perhaps this was a mistake, because the information is marked 'unclassified', but all fields are furnished, including some which indicate security related usage. Grove sold this set of 33 microfiche cards for about $13.

Two way radio equipment formerly used by the armed forces often appears for sale at hamfests. Less often, Secret Service and FBI radios appear there from time to time, too. When you see such equipment, look over the radio for a

frequency label and write down the frequencies stamped on the crystals or channel elements. Make note of any service or property tags which specify the agency or military base which used the equipment.

Radio Clubs

One of the best parts of the hobby is sharing it with other radio buffs. Trading information with other hobbyists about frequencies, communication systems, and receiving equipment is more valuable than a pile of magazines.

Since the early 1960s, I had been an amateur radio operator, and belonged to amateur radio clubs, but I never realized there were any scanner clubs! In 1983, I joined the world's largest scanner club, the Radio Communications Monitoring Association (RCMA), now out of business. There are several regional scanner clubs, spun off from the former RCMA, which hold regular meetings.

Another club which prints sensitive federal frequencies is the All Ohio Scanner Club. I enjoy its bimonthly publication, The American Scannergram, which is about 60 pages long. Although concentrating on Ohio, there is frequency information from other states, and plenty of product reviews and scanning tips.

More information is available on the WWW page http://aosc.rpmdp.com and from:

All Ohio Scanner Club
50 Villa Road
Springfield, OH 45503

Do Your Own Sleuthing

There is a challenge in deriving new spectrum usage information on your own. Sometimes it requires several days of listening, taping, and compiling fragments of information. Other times, the frequency information is there for the taking - without hassle.

You can approach from two directions:

1. Listen first: Monitor a frequency or frequencies, and determine who's transmitting and what purpose the channel serves. Once you identify the user, log the information.

2. Compile first: Take advantage of opportunities, such as examining the frequency label on a guard's radio, or reading the FCC license hanging on the "radio room" wall, to compile frequency lists, then monitor the listed frequencies to confirm that they are

really in use. Readers are urged to abide by the rules of good taste and local laws in the quest for frequency information. Don't trespass, wait for an invitation.

Most listeners use a combination of both approaches.

What Makes Station Identification Difficult?

In most instances, FCC rules require radio users to identify their operations with FCC assigned call letters. Police and fire departments, especially those with trained radio dispatchers, seem particularly conscientious about station identification. Like commercial broadcasters, many of these stations identify on the hour and the half hour.

Some repeater stations have Morse code identification circuits which transmit call letters on a periodic basis, insuring compliance with FCC rules.

On the other hand, over 75% the industrial radio stations monitored within the last year ignore the FCC regulation, making it difficult for a listener to identify a station. Some stations may operate for years using the nondescriptive "base to mobile 2" or "Joe to base" protocol. One rung up the hierarchy are stations that identify using something like "Acme base to 107", giving the listener a clue for his log. If call letters are given, they are often rendered unintelligible by operators who fail to enunciate. The failure to identify is more likely due to sloppiness, rather than any attempt to hide station identity.

While not regulated by the FCC, federal government radio stations vary in the extent to which they identify their transmissions. Some federal stations do not have call letters. A nearby paging transmitter periodically transmits a voice recording announcing, "This is the Army Joliet Ammunition Plant." What more could a listener ask for?

Aside from a scanner and antenna, the most useful piece of equipment for sleuthing is a voice actuated (VOX) cassette tape recorder. You don't need a high fidelity model or anything fancy. I use two modified Radio Shack CTR-75 recorders, a discontinued model.

VOX recorders allow one to compress a whole day's worth of monitoring onto a single tape. I often leave a recorder "armed" and connected to a scanner at home while I am at the office or doing something else. When call letters are mumbled, I can play and replay the tape until I hear and understand them.

If you don't have a VOX recorder, consider a device like the NiteLogger II tape recorder controller, made by Benjamin Michael Industries. It connects simply between scanner and recorder and contains sound activation circuitry to trigger the recorder.

The following examples illustrate techniques I've used to derive new frequency information.

Examine the FCC License on Premise

I have found the actual FCC radio license, complete with frequency assignments, hanging on the walls of places like the Bell Labs security office and the guard shack at Waste Management's Greene Valley Landfill in Naperville.

Examine the Labels on Radio Equipment

Frequency information is engraved on labels on the back of many walkie-talkies, or inside the battery compartment, like in the Motorola HT220 model. Most pagers have labels on the bottom or inside. Like passwords taped onto terminals, it's not uncommon to find Dymo or P-Touch tape labels embossed with frequencies or call letters glued to the front of base stations.

You can make your own opportunities for eyeing the equipment or take advantage of "open house" events. If information is displayed publicly, then a reasonable person could assume it's not government secret.

- At the annual Glenview Naval Air Station open house, I examined a military manpack radio being used by dispensary paramedics. The radio's tuning dial was set at 34.15 MHz.

- The Illinois Army National Guard displayed two armored personnel carriers at the local county fair, each equipped with VHF-FM and HF-SSB transceivers.

In addition to a tuning control (VFO), the VHF-FM radio had a set of channel select pushbuttons, much like those in a car radio. I asked a guardsman a few questions about the radio, and he demonstrated the channel preset feature. A panel above the channel pushbuttons was labeled with the frequencies: 32.055, 34.45, 35.35, 40.55, and 40.60 MHz.

- An Army National Guard UH1 helicopter was displayed at the Marseilles armory "open house". The public was permitted to climb aboard, and observe the instrumentation and radio gear. A channel plate on the instrument cluster listed over a dozen frequencies.

Hobbyists are urged to exercise a modicum of restraint and good judgement. In New Jersey, a radio technician/hobbyist called to service a transmitter in a county building, noticed a new unattended repeater installation in the same room. Being curious about what frequency this repeater was on, he opened the access door to copy the frequencies from the radio's crystals. It turns out that this radio belonged to the US Secret Service, and opening the access door could have activated a "tamper alarm"!

The tech was skating on thin ice. He had nobody's permission to tamper with that equipment.

Another source of frequency information is as close as your nearest Radio Shack store. Some Radio Shack stores make a local frequency list available to assist their scanner customers. Be sure to ask. Stores located in shopping malls almost always know the mall security frequencies. I often check the frequencies programmed into the floor model scanners, too.

Equipment to Determine Frequency Usage

If you don't know the exact frequency, but have a general idea of the range (e.g. 150 - 152 MHz), use your scanner's "search" mode. Most programmable scanners afford the ability to search between two frequency limits set by the user. Some models, including the Radio Shack PRO-2035, ICOM R7000/R7100, Bearcat 2500XLT, and Bearcat 250, have the ability to automatically store active frequencies found during an unattended search operation.

To find the frequency of a hotel communications system, one fellow installed his Bearcat 250 in his car and parked in the hotel lot, leaving the scanner in the "search and store" mode. He left the antenna disconnected so the scanner would only respond to a transmitter in the immediate vicinity.

Test equipment can aid in the quest for new frequency information. I've used a spectrum analyzer connected to an outside antenna, another spectrum analyzer connected to a receiver IF stage, and a frequency counter for close-in work.

How Can I Determine To Whom I'm Listening? - An Example

While scanning the industrial frequencies in the 150 MHz range, a van driver was overheard communicating with "base" while driving around my town. The stations involved never used FCC call signs -- this would have made life a lot easier for me, and legal for them! (one may use FCC license microfiche, described earlier, to identify stations using

call letters.) Transmissions were short and infrequent, so it was decided to tape record all transmissions on this frequency for several days to determine the station's identity.

During daylight hours, a modified Regency K500 scanner was left tuned to the target frequency, connected to a cheap tape recorder through a home built interface. Using a carrier operated relay, the tape interface supplied power to the recorder only during radio transmissions, so a day's worth of traffic could be compressed into a 45 minute tape.

Each day, the tape was played back and notes on names, locations, and activities mentioned during the day's transmissions were taken. The van driver appeared to be making daily stops at a local bank and two shopping malls. A Walgreen's store seemed to be the only stop at one mall. A few times, "base" ordered the van "back to the Training Center." There were frequent references to "guests checking out", "dropping a guest off", and "instructor[s] missing a class". At times, "base" spoke with "security", who must have been using a walkie-talkie as his signals weren't strong enough to hear.

Was this a hotel? Calls to the three local hotels revealed that none provides shuttle bus service to the shopping malls. A call to the Walgreen's, inquiring about bus service to the store, drew another blank. During my shopping trips, I began to pay closer attention to vans with antennas driving through the parking lots.

I was leaving the mall one day, when a week's effort paid off. A maroon and white van, equipped with a VHF-Hi antenna, was dropping shoppers off at Walgreen's. A sign on the van's door read:

XYZ Central Training Center (XYZ is a pseudonym for the actual licensee name.)
Lisle, Illinois

I watched the driver pick up a microphone, and listened to him on my portable scanner checking back with his "base".

All the pieces fit: the "guests", the "classes", the "instructors". Mystery solved; I had been monitoring the customer training center for a large computer manufacturer. The training center has hotel rooms and dining facilities to accommodate students from out of state. As a convenience, shuttle van service is provided to local shopping malls.

Summary

Through books, government records, and radio clubs, scanner listeners can make use of frequency information compiled by others. Two-way radio users often fail to identify their transmissions properly, making it more difficult for listeners to know who they are monitoring. By examining radio equipment labeling, and monitoring and taping transmissions, scanner enthusiasts can unearth new information.

Absolutely! Our current president went before the UN in the past
year and loudly denounced the citizens America becasue we do not want to
deal with the damn U.N. It has long been the home of communists and
socialists. Many Americans know that the UN is not good for our future,

nor is socailism, or communism.

IMPROVE THE SQUELCH IN YOUR MONITOR RECEIVER

Copyright 1988 - 1996 by Bob Parnass, AJ9S

[NOTE: The first version of this article appeared in the RCMA Newsletter, December 1988. It may not be reproduced in whole or in part on CDROMS, in bulletin boards, networks, or publications which charge for service without permission of the author. It is posted twice monthly on the USENET groups rec.radio.scanner, alt.radio.scanner, sci.electronics.repair, and rec.radio.info. It is also available electronically from the rec.radio.scanner ftp archive on the official USENET FAQ library ftp://rtfm.mit.edu/pub/usenet-by-group/rec.radio.scanner.]

The squelch control in some FM monitor receivers is difficult to use because of too much hysteresis. The American Heritage Dictionary of the English Language defines hysteresis as the:

o "Failure of a property changed by an external agent to return to its original value when the cause of the change is removed."

It's like having play in a car's steering wheel, or backlash in a gear set. Too much hysteresis in a squelch circuit forces one to keep the squelch at a tighter setting, missing weaker signals when scanning or searching. The squelch hysteresis problem was first addressed in a 1984 article about the Radio Shack PRO-24 crystal controlled scanner.

Why do engineers design these circuits with any hysteresis? Basically, hysteresis prevents weak signals from "popping" the squelch open and closed rapidly, which would be very annoying to the listener. A squelch circuit with hysteresis requires a stronger signal to open the squelch than it does to keep it open.

Models cursed with too much hysteresis include the Uniden/Bearcat 800XLT and 760XLT, Radio Shack PRO-2003, PRO-2004, and others. Don't despair, the fix is simple for most radios. I've successfully reduced the squelch hysteresis by replacing a single resistor.

Hysteresis is usually implemented by providing feedback from the squelch gate input to output, through a resistor. The higher the resistor value, the less feedback there is, and less hysteresis. My modification involves replacing the "stock" resistor with a higher value resistor, as identified in the table below.

This technique does not apply to some of the newer Uniden models, because the squelch hysteresis is partially determined by firmware inside the processor IC.

This article cannot provide step-by-step instructions for each radio. I always encourage radio hobbyists to purchase the service manuals for their equipment. The most useful sections of the manual are the schematics and printed circuit diagrams. Good manuals will also describe the theory of operation and alignment procedures, and contain a complete parts list.

If your radio has too much hysteresis, and is not listed in the table, study the service manual. Motorola MC3357, MC3359, and MC3361 integrated circuits, which contain IF and squelch circuitry, are popular in scanners. In these receivers, look for the hysteresis resistor to be connected to these ICs.

Notes

1. The author cannot furnish modification information for other radios.

2. Don't attempt this, or any other internal modification, unless you are skilled in electronic servicing.

3. Make sure your receiver is disconnected from any power source before opening the cabinet.

Table 1. Squelch Hysteresis Resistor In Selected Receivers

Squelch Hysteresis Resistor In Selected Receivers		
Receiver Model No.	Res-istor Value	Comments
Radio Shack PRO-24	R35 33K	replace with 220K. Located between pins 12 and 14 of MC3357 (IC1)
Radio Shack PRO-2002	R197 47K	try 220K.
Radio Shack PRO-2004	R148 47K	remove R148 or replace with 220K.

Abstract

This article discusses the purchase of used scanner radios
and includes these topics:

1. Motivation for buying a used scanner
2. A used scanner may be a broken scanner - where to get
it fixed
3. Evolution of the scanner
4. Obtaining crystals
5. Keyboard programmable scanners

The author writes a monthly "Scanner Equipment" column for
Monitoring Times magazine, published by Grove Enterprises,
but views expressed in this article are his own.

Introduction

Anybody with enough money can buy a brand new scanner, but
you can save lots of money if you get a good deal on a used
scanner. Hamfests are probably the best place to find used
radios, but you must be familiar with the equipment.
Hamfests are repleat with older radios you won't see in
today's catalogs.

At last count, there were over 140 scanners and monitor
receivers of various brands in my collection. I purchase
most of my receivers at hamfests or horsetrade with other

radio hobbyists.

A Used Scanner May be a Broken Scanner

Getting a bargain is not without some risk. I have had sellers look me square in the eye and tell me their radio worked fine -- when it really didn't.

Buying a used portable scanner is riskier than buying a mobile or base model. Portable scanners are subject to more physical abuse and many have been dropped. If a radio has been dropped, the laws of probability dictate that the first point of impact was probably a corner, so be sure to examine each corner for evidence of trauma.

Scanners used in mobile service are subject to vibration, dust, and temperature extremes. This shouldn't dissuade you from buying a used mobile scanner, but be aware of possible complications.

You should have some recourse if the radio you buy turns out to be defective. For hints on fixing older Bearcat base scanners, see "Tips for Fixing Bearcat Scanners," by Bob Parnass, AJ9S, in March 1996 Monitoring Times magazine.

If you can't fix the radio yourself, you can pay to have the manufacturer or a service clinic repair it for you. Radio Shack repairs scanners, and Uniden can repair newer Bearcat models but often refuses to service older models, claiming they are "unrepairable" and carving the letter "U" on the cabinet.

G & G Communications (telephone 716-768-8151) is a family owned company which repairs scanners and stocks parts and crystals for several older models. They usually don't repair AOR scanners due to lack of manufacturer support. They are located at 9247 Glenwood Drive, LeRoy, NY 14482. (http://www.iinc.com/ggcomm/ or email ggcomm@iinc.com or ggcomm@aol.com)

The re-incorporated Electra Corporation, (317)326-4419, is able to effect repairs on some older (pre-Uniden) Bearcat scanners. They sell crystals, antennas, power cords, owner's manuals ($11 ea). Electra Corporation is located at 251 N. 300 W. Greenfield, IN 46140-8496.

Evolution of the Scanner

It helps to understand some scanner history before shopping for a used scanner. You will likely see radios from many vintages at a hamfest, and should avoid buying early units unless you are a scanner collector.

One of the earliest ancestors to the scanner was the converter. Manufactured by Tompkins (Tuneaverter), Petersen, Bearcat (Lil Tiger), Midland, and others, converters were made to operate in conjunction with AM radios. Then came wide band monitor receivers, in both tunable and crystal control models, like the Radio Shack PRO-2B. Truthfully, converters and tuneable FM receivers are interesting but don't work well by today's standards.

While tuneable receivers were in vogue, solid state technologies supplanted tubes. Better performing, narrow band crystal controlled units, like the Sonar FR-105, followed. These units did not scan, rather channel selection was accomplished using a simple rotary switch. Sonar even made a 24 channel unit, model FR-2513, in which crystals were held in a rotary "turret."

The earliest scanners, like the 1968 vintage Bearcat BCH, BCL, and BCU models, did not provide individual channel lockout capability. Electra didn't use the term "scanner" and instead called these innovative radios "business receivers." Other models, like the SBE Sentinel, employed a "Channel 1 Bypass" switch so a user could lockout channel 1.

The first scanners came in single band models, followed by multiband models. As two-way radio users started to populate the 450 - 470 MHz band, consumers were forced to pay a premium for UHF scanner coverage. Some multiband scanners, like the Electra's Bearcat III, required an optional circuit board for each band.

There were scanner mutations, designs which never evolved -- odd combinations of AM broadcast receivers with VHF-FM receive capability, like the flamboyant turquoise Sonar Sentry FR-103 portables, Electra's Jolly Roger, and GE's Surveyor series (see US patent 4,011,515, granted 3/8/77). Lafayette Radio Electronics offered a few CB transceivers with VHF receiver capability. These poor performers didn't interest consumers of that era and you should avoid these models unless you are a scanner collector.

The first programmable (crystal-less) scanners were difficult to program. Users had to look up frequencies in a code book and tediously program the information into the scanner in binary form. Some models, like the Tennelec MCP-1 (see US patent 3,961,261, granted 6/1/76), Bearcat BC-101 (see US patent 4,179,662, granted 8/4/78), and Radio Shack COMP 100, resembled Altair or PDP-8 computers, with a row of 16 or so toggle switches. Instead of toggle switches, the Regency WHAMO-10 was programmed by breaking teeth from metal combs. See US patent 4,057,760, granted 11/8/77. The GRE-manufactured SBE Optiscan (and its Sears clone) required poking or covering a series of holes in

plastic cards which were then inserted into a slot on the front panel.

Keyboard Programmable Scanners

Both Bearcat and Regency, as well as Radio Shack offer some good models. I would avoid the Bearcat 100, and older scanners made by AOR, JIL, Fox, Tennelec, and Robyn.

Scanner features often differ not only by model but by manufacturer. For instance, most Radio Shack and Bearcat programmables allow enable/disable of the delay function on a per-channel basis. Older Regency units permit the delay to be enabled/disabled only globally, that is, for all the channels at one time.

All the older Radio Shack scanners were made by General Research Electronics (GRE). Uniden began making scanner models for Radio Shack in the late 1980s, and now supplies about half the Radio Shack scanners. The older GRE-made models scan a bit slowly and have a higher level of synthesizer noise. Most have too much hysteresis in the operation of the squelch control, but this can be fixed completely by replacing one resistor. Good, detailed shop manuals are available for Radio Shack units for $5 - $12.

In the name of cost cutting, some models have done away with the concept of a "channel bank", i.e. the ability to select/deselect a group of channels at a time. The bank concept was a good one. It may be inconvenient to operate a 30 channel scanner without banks (e.g. Regency MX3000, HX1000) if you operate the way many scanner hobbyists do.

If you want to buy an American-made scanner, you will have to buy an old model. Until the mid 1980s, rivals Regency and Electra (Bearcat) built most of the scanners in their Indiana and Puerto Rican factories. Uniden, a large Japanese electronics company, purchased the scanner product lines of both competitors and moved production to Asia.

My favorite VHF/UHF receivers are the the Uniden/Bearcat BC9000XLT, the 400 channel Radio Shack PRO-2005 and PRO-2006, and the ICOM R7000, R7100, and R8500. The ICOM models are more "communications receiver" than a conventional scanner.

For portable use, I prefer Uniden/Bearcat BC3000XLT and older Radio Shack PRO-43.

Obtaining Crystals

If you do purchase a crystal controlled scanner or monitor receiver, you will probably want to buy more crystals to

cover local frequencies.

Scanner crystals may be ordered from your local Radio Shack store or from one of the companies below. Be sure to specify the operating frequency you want and the brand and model of scanner.

Some companies may ask you to send a schematic of the scanner or require more detailed information, like series or parallel resonance, load capacitance, etc.

Electra Corporation stocks crystals for the Bearcat scanners:

Electra Corporation
11915 E. Washington St.
Cumberland, IN 46229
Phone 317-894-3229

Crystals for Bearcat and other models are available from:

American Crystal Co.
1623 Central Ave.
Kansas City, KS 66102
tel. 913-342-5493

Bomar Crystal Company
201 Blackford Ave.

HAMFEST/COMPUTERFEST CALENDAR 1997 - NORTHERN ILLINOIS
last updated July 30, 1997 |

o Please report additions or changes to Bob Parnass, AJ9S, office phone: (630)979-5414, electronic mail: parnass@bell-labs.com. Thanks to Dennis Dale, Rick D. Wilson, and ARRL for providing some of the information.

AUGUST 1997

Aug 2 (Sat), Quincy, IL - The Western Illinois Amateur Radio Club. Eagles Alps, 3737 N. Fifth Street, Quincy, IL 8:00 a.m. to 2:00 p.m. Admission: $3 at the gate, $2.50 in advance. Lunch available. Free tailgating. Dealer tables available for $5, Friday evening setup permitted. Contact N9JF, tel. 217-336-4191, for table reservations. off-site VE testing. Contact NA9Q, tel. 217-224-8526, for testing information.

Aug 3 (Sun), Peotone, IL - Hamfesters Hamfest. Will County Fairgrounds. I-57 to Peotone exit 327 (east). Flea market opens at 6 AM. Indoor exihibits open at 8 AM. Admission $5. Children under 12 free admission. Info, call David Brasel NF9N, (708)448-0580 or Info-Line at (708)535-AHAM. Good sized hamfest. Poorly maintained rest facilities.

Aug 10 (Sun), Stickney IL - Dupage Amateur Radio Club, | Hawthorne Race Track, 3500 South Cicero Ave, Stickney IL. | 8AM-2PM. Flea Market setup 6AM. Admission $5 at gate, $4 | advance, Children under 12 free. Food and beverage avail- | able, handicap accessible,hourly door prizes, grand prize | 2PM. Outdoor flee market free. All indoor space reserved. | Saterday setup available (indoor). 30,000 sq ft air condi- | tioned exhibit hall. All on one level. Talkin 145.25 (Down- | ers Grove Repeater). Tx 630-985-9256. Snail DARK HAMFEST 97, | 7511 Walnut Ave. Woodridge IL 60517 enclose large business | size s.a.s.e. See http://homepage.interaccess.com/~geirh |

Aug 16 (Sat), Franklin, WI - 7:00 AM, C.A.R.S. Crystal Ridge Ski Lodge. Talk-in on 442.200+ pl 100.0 / 146.52 simplex $4.00/$5.00 Radios. Computers. Electronics. Concessions. Door Prizes. Free parking. Free camping. Large Tailgate selling area. Electricity available, $1.00. Contact C.A.R.S., PO Box 325, Franksville, WI, 53126-0325.

414-325-7427

Aug 16 (Sat), Wheaton, IL - Giant Computer show, DuPage County Fairgrounds. County Farm & Manchester Rds., Wheaton, IL. See notes at the end of this article.

Aug 24 (Sun), Woodstock, IL - Tri-County Radio Group. McHenry County Fairgrounds, Rt. 47. 6 AM. Admission $5. Talk in 146.52 MHz. Contact Bob Grosse, N9KXG. Info (voice/fax) (847)658-1678. http://www.angelfire.com/il/tcrg/ (Smaller, but fun fest. - AJ9S)

SEPTEMBER 1997

Sep 7 (Sun), Joliet, IL - Bolingbrook ARS. Inwood Recreation Center, 3000 W. Jefferson St (Rt. 52), Joliet, IL Admission $5. Outdoor flea market on paved parking lot. Indoor reserved tables. VE testing 9 AM - noon, bring original license and photocopy. Talk in on 147.33 (+600 kHz), 224.54, and 146.82 (-600 kHz). Table Info: Ed Weinstein, WD9AYR, (630)759-7005.

Sep 27 and 28 (Sat & Sun), Grayslake, IL - CFMC's Radio Expo 97. Lake County Fairgrounds, Rts 45 & 120. Admission $6. Talk in 146.76 MHz. Info (708)457-0966. (This is probably the biggest and best hamfest in N. Illinois - AJ9S).

NOVEMBER 1997

Nov 15 & 16 (Sat & Sun), Fort Wayne, IN - Fort Wayne Hamfest. Indiana ARRL State Convention. Allen County War Memorial Coliseum Expo Center. Sponsored by the Allen County AR Technical Society. Admission $5. Parking $2. www.pipeline.com/~dagagnon/. Info: (219)484-1314.

NOTES - Computer Central and Giant Computer shows

Computer Central computer shows are held at the College of DuPage, Main Arena of the Physical Education Building Park Blvd & College Road, Glen Ellyn, Il. 708-940-7547. $5 admission with card, normal admission $6.00. Opens 9:30 am - 3:00 pm.

Giant Computer shows are usually held at the Orland Park Civic Center, 147th St. & LaGrange Rd., Orland Park, IL or at the DuPage County Fairgrounds, County Farm & Manchester Rds., Wheaton, IL. Admission is $5. Show hours are 9:30 AM - 3 PM. To get on the mailing list or get more information, call (708)974-3123.

Introduction to Scanning
by Bob Parnass, AJ9S

[NOTES: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. It is posted twice monthly on the USENET
groups rec.radio.scanner, alt.radio.scanner, and
rec.radio.info. It is also available electronically from
the rec.radio.scanner ftp archive on the official USENET
FAQ library ftp://rtfm.mit.edu/pub/usenet-by-
group/rec.radio.scanner.]

The author writes a monthly "Scanner Equipment" column for
Monitoring Times magazine, published by Grove Enterprises,
but views expressed in this article are his own.

This introduction is intended for people new to the
scanning hobby and is oriented to scanning in the USA.
High level overviews of the following topics are presented:

Why Scanning?
Is Scanning Legal?
What Scanner Should I Buy?
What is a CTCSS and DCS Tone Squelch Feature?
How Do I Determine the Proper CTCSS or DCS Code?
Scanner Antennas
Coaxial Cable Feedlines
Where Can I Buy A Scanner?
Modifying Your Scanner
Scanner Repair Shops
Where Can I Obtain Frequency Information?
Do Your Own Frequency Detective Work
How Can I Use Equipment to Uncover New Frequencies?
Scanner Clubs and Mailing Lists

Why Scanning?

Every day and night, scanner hobbyists are entertained by
what they overhear on their radios. Police cars, fire
engines, ambulances, airplanes, armored cars, trains,

taxis, and buses are all equipped with radios and you can listen to them. You can monitor the local sheriff and fire departments to hear about events "as they happen," before the news reporters hear about them. Hostage dramas, bank robberies, car crashes, chemical spills, neighbor and domestic disputes, tornado sightings are all fair game. In a single afternoon, you can hear a high speed police chase, Drug Enforcement agents on a sting operation, and undercover FBI agents as they stakeout a suspect.

How about listening to a presidential candidate discuss strategy with his advisor from a 415 MHz radiophone in Air Force 1, or a team of G-men protect him while transmitting in the 167 MHz range?

Baby monitor intercoms are actually transmitters and you can hear them between 49.67 and 49.99 MHz.

Stay ahead of road conditions by listening to highway road crews, snow plows, and traffic helicopter pilots. Many midwesterners monitor the state police and and county sheriff to learn of approaching tornados long before warnings are broadcast on TV and commercial radio. Take your scanner to sporting events and listen to race car drivers, football coaches, etc., in the 151, 154, and 468 MHz ranges.

Monitor the everyday hustle and bustle of businesses, from cable TV repair crews tracking down pirate descrambler boxes, to security guards at your nuclear power plant or mall security guards chasing a shoplifter.

Is Scanning Legal?

In the United States, scanning from your home or at work is perfectly legal in most situations. The Electronic Communications Privacy Act of 1986 made it illegal to listen to mobile phones, common carrier paging, and a few other types of communication. Public law 103-414, signed Oct. 25, 1994, amended the law (Title 18 USC, Part I, chapter 119, sections 25110 and 2511) and outlaws listening to cordless phones, too, but many scanners cover these frequencies. It's clear from the discussions posted on the Internet that Americans still listen to whatever they want in the privacy of their own homes despite the laws.

It is illegal for companies to sell or import into the USA recently manufactured scanners which cover or can be easily modified to cover the cellular phone frequencies, but sales by private individuals will still be allowed.

The rules define "readily altered by the user" as "clipping the leads of, or installing, a simple component such as a

diode, resistor and/or jumper wire; replacing a plug-in semiconductor chip; or programming a semiconductor chip using special access codes or an external device, such as a personal computer."

Speaking of privacy, federal law also requires you to keep what you hear to yourself and not use the information you hear on your scanner for personal gain.

Be aware that several states have laws pertaining to scanning while in your car. Indiana restricts some portable scanners. A few states have enacted their own laws against listening to cordless phones. You can find out about these restrictions in a paperback book, Listeners Lawbook, compiled by Frank Terranella, Esq. available for $9.95 + shipping from Grove Enterprises, 7540 Highway 64 West, Brasstown, NC 28902.

What Scanner Should I Buy?

Radio Shack and Uniden (maker of Bearcat, Regency, and Cobra brands) offer a wide choice of scanners. Radio Shack scanners are actually manufactured by both GRE (General Research Electronics) and by Uniden. Personally, I don't recommend Trident nor many of the AOR brand scanners, although the AR8000 and AR3000 have good reputations and the AR5000 works well.

Programmable (synthesized) units have replaced crystal controlled models as they don't require crystals and usually have a keypad that permits you to store frequencies into channels. Programmables are now so cheap it doesn't make sense to buy a crystal unit as your main scanner unless you get it for under $45 or so.

You can get a battery operated hand held scanner, a bigger "base" scanner which is powered from an AC outlet, or a mobile scanner which connects to your auto's electrical system. There are tradeoffs -- base and mobile scanners have larger displays and almost always provide more audio than portables, and some portables are more prone to interference when connected to outdoor antennas than base models. But when severe weather knocks out the power in your home, there's nothing like having a battery operated scanner to monitor the power utility and police frequencies!

Make sure your first scanner has a "search" feature, which allows it to search all the frequencies between two frequency limits of your choosing. Beware of low cost programmables which can't search. Some of the newer models, like the Uniden SportCat and Radio Shack PRO-2046,

allow searching between limits, but the limits are factory programmed and cannot be altered.

Get a model which covers the 800 MHz band. Usage of the 800 - 950 MHz band is growing fast and you will miss out on the action unless your scanner covers this band.

If you're not sure whether you'll like scanning, don't want to spend much money, a 50 channel scanner will do. In general, the more channels and banks, the better.

Most of the action takes place on frequencies between 30 and 1000 MHz, so don't be misled by scanner models boasting coverage from 3 to 2000 MHz. There's currently not much to monitor in the 1000 - 2000 MHz range.

If you are interested in receiving short wave, that is, signals in the 3 - 30 MHz range, it's best to get a short wave radio specifically designed for that purpose. Although some scanners receive the short wave band, their performance in that range is often second rate. The $2000 Icom R8500 and AOR AR5000 models are exceptions.

Deluxe scanners can be controlled and/or downloaded by a personal computer, a feature which appeals to a small but growing number of scanner owners.

Almost all low and mid-priced scanners are prone to receiving images -- receiving the same signal erroneously on two or more frequencies. With a few exceptions, images are unwelcome due to the interference they cause, e.g., hearing aircraft transmissions while the scanner is tuned to the local police frequency. Premium quality scanners use "up conversion" circuitry, a scheme which greatly reduces, but does not eliminate, image reception.

Currently, the more popular scanners include the discontinued Radio Shack PRO-2006 base/mobiles, the Uniden/Bearcat BC200XLT (a/k/a BC205XLT), BC220XLT, BC230XLT, and Radio Shack PRO-43 and PRO-60 portables. A number of owners report problems with the Icom R1 portable and the older Uniden/Bearcat 8500XLT base and 2500XLT portable. The Uniden BC9000XLT base and BC3000XLT portable work very well and are my current favorites.

Looking for value? At $180 discount price, the 100 channel Uniden/Bearcat BC860XLT base is a good value and available at most Wal-Mart stores. The new RELM HS200 portable performs very well is an excellent value at its $250 street price.

Considered by many as the best scanner ever made, the 400 channel Radio Shack PRO-2006 was replaced by the 1000

channel PRO-2035, which was replaced by the PRO-2042. The portable Radio Shack PRO-64 and PRO-60 are good performers. All five models employ up conversion and are made for Radio Shack by GRE (General Research Electronics).

CTCSS and DCS Tone Squelch Feature

Upscale scanners can be optioned with a subaudible tone decoding squelch circuit. There are two types: CTCSS (Continuous Tone Coded Squelch System) and DCS (Digital Coded Squelch). In simple terms, this feature lets your scanner ignore signals you don't want to hear.

Most land mobile two way radios, except trunked systems, transmit either CTCSS or DCS signals subaudibly along with the voice information. U.S. military field radios employ wider deviation and a 150 Hz CTCSS tone, not supported by most scanners or CTCSS decoders.

There are over 40 different CTCSS codes and you can program a specific CTCSS or DCS code into each memory channel. Using a CTCSS or DCS decoder permits your scanner to open the squelch only if the transmission has a code which matches the code you program.

CTCSS and DCS decoding offers several advantages:

1. Ignore unwanted signals on shared frequencies: It is common for several users to share the same frequency, e.g., my county sheriff uses the same frequency as Chicago Police, located about 60 miles away. I want to hear my sheriff's transmissions but don't want the scanner to stop on or listen to Chicago Police transmissions. This is especially a problem when radio propagation is good, e.g., during a "band opening," when reception range is temporarily increased.

2. Combat intermodulation interference: Helps keep out intermod and image interference from strong pagers and other signals which are not transmitted with a matching code.

3. Ignore scrambled transmissions: Many federal law enforcement agencies (FBI, Secret Service, etc) and some local police agencies employ digital voice scrambling, which sounds like white noise and is annoying to hear. The CTCSS or DCS code is sent only when the station is transmitting unscrambled, or "in the clear." You can program federal frequencies along with the proper code into your decoder-equipped scanner so you won't have to listen to the scrambled mess and only hear their transmissions when they are

unscrambled.

CTCSS also goes by various tradenames: Motorola's PL (Private Line), GE's Channel Guard, and RCA's Quiet Channel. Motorola uses the tradename DPL (Digital Private Line) for its digital coded squelch.

How Do I Determine the Proper CTCSS or DCS Code?

There are a few ways to determine the CTCSS or DCS code transmitted by a station:

1. Use an outboard CTCSS/DCS reader which must be attached to the discriminator output circuitry inside the scanner. The reader has an LCD or LED display which indicates the code when a station transmits. I use a CSI model CD-1 Communications Decoder Unit, an an excellent reader which sells new for about $200. (Connect Systems Inc., Ventura, CA, 800-545-1349, www.connectsystems.com).
2. Many of the ScannerMaster guides, as well as scanner club newsletters, print the CTCSS codes used by transmitting stations.
3. On some scanners equipped with the CTCSS squelch, you can program into memory the frequency of interest. Then you "tune" slowly through all the different CTCSS and/or DCS codes until the squelch opens and you hear the dispatcher talking. This is a slow process and the station has to keep transmitting during it.
4. A slow, brute force method is to program the same frequency but a different CTCSS code into several channels and see where your scanner stops.
5. In some cases, I've actually examined the walkie-talkies I want to monitor and found the CTCSS code printed on a label on or inside the radio.

Scanner Antennas

All scanners come with a built in antenna, permitting reception up to about 20 miles or so.

Portable scanners are supplied with a helical (spring shaped) antenna, covered by rubber. The rubberized antennas furnished with current models are too stiff and place stress on the antenna jack. Older scanners to be supplied with more flexible antennas. I prefer these alternative antennas for use with portable scanners:

1. The Icom FA-1433B dual band flex antenna, a thin and very flexible rubber antenna, is slightly longer than a stock heliflex but provides better performance.
2. The Austin Condor is a 12" long rubberized antenna available for about $30. While considerably longer

than the stock antenna and the FA-1443B, the Condor is very flexible and provides VHF-high band reception superior to both. It is not designed to cover the VHF-low band, but will allow reception there at least as good as shorter antennas.
3. The "Thin-Stick" is an 18 inch telescoping antenna for extended range. It is made in USA by Smiley Antenna Co., Inc. and is designed to cover both the 2 meter and 220 MHz bands, but its variable length means it can be adjusted for optimum performance on other bands. What makes the Thin-Stick different from an ordinary telescoping antenna is the spring between the antenna and the connector portions. The spring absorbs most of the impact if the antenna collides with an object. The street price is about $17 and it is available from Amateur Electronic Supply, Milwaukee and other retailers.

Outdoor antennas, like the Channel Master 5094A or Antenna Specialists AV-801 (recently discontinued), can extend reliable reception to 50 miles or more, depending on terrain. If you do use an outdoor antenna, be sure to disconnect and ground it during storms and when not in use to avoid a lightning hazard. Discone and ground plane type antennas can be more prone to cause scanner damage due to static charge buildup because they are not at "DC ground."

Coaxial Cable Feedlines

If your antenna installation requires more than 50 feet of feedline, use RG213/U or high quality RG8/U coaxial cable. RG213/U, e.g., Belden type 8267, has a non-contaminating jacket and will last longer. Each has an outer diameter of about 13/32". Similarly sized Belden 9913 cable and clones have lower attenuation but are difficult to bend, require special connectors, and can accumulate moisture inside because they are hollow.

If you must use a small diameter cable for long runs, use RG6/U. Avoid RG58/U (7/32" OD) due to its losses at high frequencies. RG8/X (1/4" OD) is suitable for short patch cords.

Where Can I Buy A Scanner?

Almost every community has at least one Radio Shack store, and you can find scanners there. Be sure it is on sale, as Radio Shack list prices are high and their scanners are offered at reduced prices by mail order discounters.

Discount chain stores like Wal-Mart, Best Buy, K-Mart, Service Merchandise, and Circuit City sell scanners, but

carry just a few models. Department stores, like Sears Roebuck and Montgomery Wards, sometimes offer low end scanners, although at high prices.

The best buys on new scanners are from reputable mail order radio dealers, for example:

- Grove Enterprises, 7540 Highway 64 West, Brasstown, NC 28902. For a free catalog, call (704)837-9200. Telephone (orders only): (800)438-8155. Web page is http://www.grove.net

- National Electronics (formerly National Tower Company), PO Box 15417, Shawnee Mission, KS 66215. Telephone (800)762-5049, (913)888-8864. Web page is www.sound.net/~ne/

- The Ham Station, 220 N. Fulton Ave., Evansville, IN 47719-0522. Telephone (800)729-4373, (812)422-0231.

- Scanner World (Albany, NY). Telephone (518)436-9606.

- Amateur Electronics Supply (Milwaukee, WI). Telephone (800)558-0411. Web page is www.aesham.com

Beware of inflated "shipping and handling" charges and be sure to include these when comparison shopping.

Used scanners may be found at hamfests, flea markets, garage sales, or listed in the classified advertisement section of your newspaper.

Modifying Your Scanner

The term "mod" is often used as shorthand for "modification." If you are handy with a soldering iron, you may be interested in modifying ("modding") your scanner to add features or enhance its performance. Be warned this usually voids your warranty and current models are difficult to service due to the small, delicate surface mount components. By federal regulation, new scanner models cannot be easily modified to tune the cellular phone bands.

The term "mod" has been narrowly used by some people to mean a change which permits a scanner to receive cellular phone frequencies. This definition is far too restrictive as there are several ways one could modify a scanner, e.g., changes to improve audio quality, adding an S-meter, expanding the number of channels, changing the earphone jack to accept stereo headphones, etc.

Modification article files can be copied from several ftp sites including the /pub/ham-radio/mods directory at:

garfield.catt.ncsu.edu
oak.oakland.edu (IP address 141.210.10.117)

Modification articles posted on Usenet seem to have a life of their own. Frequently, they are plagiarized from the Internet and compiled by book, CDROM, and magazine publishers, sometimes reworded, then sold. Hobbyists then copy the modifications from the books, CDROMs, and magazines back onto the Internet or BBSs (bulletin board systems)!

Grove Enterprises and other companies advertise a warranted, modification for fee service.

For information on "virtual downconverter" modifications, see Steve Donnell's article in January 1995 RCMA Scanner Journal or February 1996 Monitoring Times. Reprints of articles from Monitoring Times are available for $3.00 each plus a self-addressed stamped envelope from:

Grove Enterprises,
7540 Highway 64 West,
Brasstown,
NC 28902. For a free catalog, call (704)837-9200.
Telephone (orders only): (800)438-8155.

I don't get any part of this reprint fee.

Scanner Repair Shops

Is your scanner broken? Aside from sending the scanner back to the manufacturer for repair, here is one company which repairs scanners:

- G & G Communications (telephone 716-768-8151) - (www.iinc.com/ggcomm or email ggcomm@iinc.com or ggcomm@aol.com) This family owned company repairs scanners and pagers and stocks parts for several older models. G & G cannot usually repair AOR scanners due to lack of manufacturer support. G & G sells and sometimes buys old scanners and parts, too. They are located at 9247 Glenwood Drive, LeRoy, NY 14482.

Repair tips for Bearcat and Radio Shack scanners are discussed in two other FAQ articles.

Where Can I Obtain Frequency Information?

To avoid chaos, the FCC licenses two-way radio users and assigns them specific frequencies. Groups of frequencies are allocated to specific types of users, so you won't usually find fire departments using the same frequencies as taxi drivers, for example.

Scanner enthusiasts can obtain frequency information from several sources, including books, government microfiche records, or other listeners.

Books: The most convenient source of fire, police, and local government frequencies is Gene Hughes' Police Call Plus, published each year in 9 regional volumes by Hollins Radio Data, and sold at Radio Shack and larger book stores. The newest editions contain selected business listings, too, although callsigns and other details are listed only for local government and public safety licensees.

I also recommend the book, Monitor America, published by SMB Publishing (now known as Scanner Master Publishing), and available from Grove Enterprises for about $30. A 1100 page 3rd edition is now available. Monitor America contains several pages of police, fire, local government, news media, sports, federal government, and commercial broadcast frequencies for all 50 states. It contains detailed communications system profiles and precinct maps for major metropolitan areas. Police and fire radio codes and unit identifiers unique to local agencies are listed for several cities. This differs from Police Call, which gives a more sterile, but uniform treatment of licensees, listing even the smallest of towns.

Uniden has published several regional directories using the "Betty Bearcat" name, although there are much better directories available from Scanner Master (Newton Highlands, MA, tel. (508)655-6300) for some regions.

The most readily available source of sensitive US government frequencies is still Tom Kneitel's Top Secret Registry of US Government Radio Frequencies. Published by CRB Research, the 8th edition is available from Grove Enterprises for about $22. Kneitel's book contains frequency listings for NASA, military, FBI, Secret Service, DEA, IRS, Border Patrol, arsenals, ammunition plants, missile sites, and others in the 25 to 470 MHz range.

Tab Books Master Frequency File, first edition, written by James Tunnell and Robert Kelty, lists federal agencies and frequencies and deserves a read. However, there are no military listings and many pages are devoted to appendices and references which contain no frequency listings. The space would be much better used by a combined federal frequency list sorted by frequency.

Commercial Magazines: Although national in circulation, local frequency information is sometimes available in Grove's Monitoring Times (tel. 704-837-9200, www.grove.net) and the sensationalistic Popular Communications, (tel. 516-681-2922). National Scanning (NatScan) is a national

scanner magazine published bimonthly and is affiliated with Uniden's Bearcat Radio Club. Early issues disappointed experienced scanner hobbyists, but it now has a good column on scanner modifications and has greatly improved its coverage of east coast frequencies since merging with NESN (North East Scanner News). The best scanner frequency lists are often found in club publications, not commercial magazines, and are discussed later.

The Scanner Club is the name of a bimonthly magazine published by Les Mattson. It is a successor to the Northeast Scanning News and is the official publication of The Scanner Club, a not-for-profit club organization. TSC's main strength is local frequency information, including CTCSS codes. Sample issues are $4 each. A yearly membership costs $24.95 and includes 6 issues. Write to The Scanner Club, PO Box 62, Gibbstown, NJ 08027 for more information.

Government Records: Every year, the US Government sells FCC license information, in the form of microfiche, floppy disk, and magnetic tape, to the public through the US Department of Commerce National Technical Information Service (NTIS). The high cost of buying government records limits their appeal to hardcore enthusiasts. You can write for a catalog of FCC Master Frequency Database items to the NTIS, 5285 Port Royal Road, Springfield, VA 22161.

The FCC has an agreement with PerCon (tel. 716-386-6015), a private company, to sell FCC license information to the public on CDROMs. You can buy the full license information for a multi state region or a less detailed license database covering the the entire USA on CDROM for about $100. The PerCon Spectrum CDROM sells for $29 and contains a handful of fields for every FCC license in the US. The Spring 1995 edition works in DOS, Windows, and Mac environments.

Grove enterprises sells FCC license information on CDROM for $100. In the 1995 edition, fields are different than PerCon's Spectrum CDROM but the data appears to be of the same vintage. The licensee name and licensee city are used instead of the DBA (doing business as) name and transmitter city which makes query results confusing.

As I have already done for hundreds of radio enthusiasts, companies, government agencies, and organizations across the country, I will locate FCC licensed and selected FAA and CAP transmitter sites in an area of your choice, in any state, and produce a custom RadioMap(TM) report, including a beautiful 8-1/2" by 11" scaled color map, protected by plastic. The map is marked with transmitter sites, cities,

highways, airports, military installations, national parks, etc.

The graphical nature of RadioMap allows you to identify antenna sites and visualize the transmitter locations in your neighborhood, near your office, and other places of interest -- from VLF through microwave. The report lists frequencies, callsigns, and licensee names. RadioMap covers police, fire, local government, TV, business, industry, common carrier, railroad, trucking, and many more types of transmitter sites, excluding ham radio stations. Wireline and nonwireline cellular phone and AM/FM broadcast transmitter sites are clearly marked using unique color icons.

Industrial customers use RadioMap reports to survey the "radio environment" prior to installation of radios and wireless microphones at customer sites. RadioMap is used by the maritime and broadcast industries, as well as ham radio operators to solve intermod interference problems, and has been very favorably reviewed in RCMA Scanner Journal, American Scannergram, and USSN.

The RadioMap processes and software are unique and proprietary. Unlike "more tame" maps, RadioMap shows the locations of military bases, ammunition plants, arsenals, weapons factories, and other military installations.

For a flat fee, you choose the center location, and I choose the range, depending on transmitter site density:

suburbs: 5 mile range (100 sq. mi. area)
rural areas: 10 or more miles (400 sq. mi. area)
dense urban area: 1 - 2 mile range

Longer ranges for additional charge - call for pricing.

A custom RadioMap report costs $24.95 plus $5.00 shipping and handling. For an additional $5.00, I will include a custom frequency allocation histogram, a 0 - 1,000 MHz "spectrum analyzer-like" display showing spectrum usage by the transmitters in the map coverage area. Send check or money order payable to Bob Parnass for $29.95 for standard or $34.95 for deluxe RadioMap report with histogram. Include your name, address, and telephone number, along with center location (nearest intersection of 2 streets, or latitude & longitude) and mail to: Bob Parnass, 2350 Douglas Road, Oswego, IL 60543. tel. (630)554-3839 6-10 PM central time. For a brochure, send SASE.

Do Your Own Frequency Detective Work

When you try listening to a frequency for the first time, you'll want to know who you're hearing.

Although FCC rules require radio systems to identify their operations with their assigned call letters either automatically or verbally, most ignore the regulation. This often makes it difficult to know who is transmitting. Moreover, many radios are now being placed in service illegally, without first obtaining the required FCC license.

There is a challenge in deriving new spectrum usage information on your own. Sometimes it requires several days of listening, taping, and compiling fragments of information. Other times, the frequency information is there for the taking - without hassle.

You can approach from two directions:

1. Listen first: Monitor a frequency or frequencies, and try to determine who's transmitting and what purpose the channel serves. Once you identify the user, log the information.

2. Compile first: Take advantage of opportunities, such as examining the frequency label on a guard's radio, or reading the FCC license hanging on the "radio room" wall, to compile frequency lists, then monitor the listed frequencies to confirm that they are really in use. Readers are urged to abide by the rules of good taste and local laws in the quest for frequency information. Don't trespass, wait for an invitation.

Most listeners use a combination of both approaches.

You can examine the FCC license on premise. I have found the actual FCC radio license, complete with frequency assignments, hanging on the walls of places like the mall security office or company guard shack. You can examine the labels on radio equipment. Frequency information is engraved on labels on the back of many walkie-talkies, or inside the battery compartment, like in the Motorola HT220 model. Most pagers have labels on the bottom or inside. Like passwords taped onto terminals, it's not uncommon to find labels embossed with frequencies or call letters glued to the front of base stations.

You can make your own opportunities for eyeing the equipment or take advantage of "open house" events. If information is displayed publicly, then a reasonable person could assume it's not government secret. Hobbyists are urged to exercise a modicum of restraint and good judgement, however.

How Can I Use Equipment
to Uncover New Frequencies?

If you don't know the exact frequency, but have a general idea of the range (e.g. 150 - 152 MHz), use your scanner's "search" mode. Most programmable scanners afford the ability to search between two frequency limits set by the user. A few models, like the ICOM R7000/R7100, and R1, and older Bearcat 250 and Regency K500, have the ability to automatically store active frequencies found during an unattended search operation.

To find the frequency of a hotel communications system, one fellow installed his Bearcat 250 in his car and parked in the hotel lot, leaving the scanner in the "search and store" mode. He left the antenna disconnected so the scanner would only respond to a transmitter in the immediate vicinity.

Aside from a scanner and antenna, the most useful piece of equipment for sleuthing is a voice actuated (VOX) cassette tape recorder. You don't need a high fidelity model or anything fancy, a Radio Shack CTR-82 will do. It's best to use a shielded, attenuating cable to feed the scanner audio into the recorder rather than relying on the recorder's internal microphone.

VOX recorders allow one to compress a whole day's worth of monitoring onto a single tape. I often leave a recorder "armed" and connected to a scanner at home while I am at the office or doing something else. When call letters are mumbled, I can play and replay the tape until I hear and understand them.

Test equipment can aid in the quest for new frequency information. I've used a spectrum analyzer connected to an outside antenna, and a frequency counter for close-in work.

Are There Any Scanner Clubs or Mailing List?

One of the best parts of the hobby is sharing it with other radio buffs. Trading information with other hobbyists about frequencies, communication systems, and receiving equipment is more valuable than any pile of magazines.

Peter Laws administers an electronic mail list read by over 700 hobbyists devoted to scanners and scanning. It's called "scan-l" and for more information, read:

http://www.wildstar.net/~plaws/scan/scan-l.txt

Clay Irving <clay@panix.com> administers a scanner electronic mailing list, called "scanning." To subscribe, send an Email message to: majordomo@lists.panix.com

In the body of the Email message, put: subscribe scanning

All Ohio Scanner Club

- 2 -

A smaller club is the All Ohio Scanner Club. Its bimonthly publication, The American Scannergram, is about 60 pages long. Although concentrating on Ohio and the Northeastern states, there is frequency information from other states, and plenty of good product reviews and scanning tips.

Annual dues are $18.50 and more information is available from:

Dave Marshall, Managing Editor
All Ohio Scanner Club,
50 Villa Road,
Springfield, OH 45503.

Chicago Area Radio Monitoring Association

The Chicago Area Radio Monitoring Association (CARMA) is the foremost club for scanner radio hobbyists in the northern Illinois area. CARMA was formed from the Chicago chapter of the Radio Communications Monitoring Association (RCMA), and we have been meeting since the early 1980s.

Many CARMA members are active in ham radio and GMRS, but the club is devoted to scanning and scanners.

Meetings are held on Saturdays, many at area restaurants, about 6 times a year. Although lunch starts at noon, the meetings begin officially at 1 PM and often run until about 4 PM. You must purchase a lunch since we get the room for free. Meetings consist of a quick review of club business, sometimes a special presentation, and a "round table" discussion/question & answer session. Large quantities of information and frequency lists are often distributed in the form of free handouts. Members often sell radio equipment at the meetings, too.

In addition to regular meetings, there are two CARMA picnic/field days during which members meet at a park, erect antennas, eat, and operate scanners from battery power. CARMA members take organized tours of various communications facilities in the area.

Club meeting dates and times are published in the CARMA newsletter, published 6 times a year. You can obtain an electronic subscription to the CARMA Newsletter. For more info, see:

http://www.TheRamp.net/shabec/carma.htm

The club's mailing address is:

CARMA
P.O. Box 2681
Glenview, IL 60025

Some CARMA members participate on the CARMA computer bulletin board, run by Will Sperling. There is a $15 annual fee for the BBS. If you have a modem and terminal or computer, you can reach the CARMA BBS by calling (630)852-1292.

All meetings are held on Saturdays at locations announced in advance. Meetings are usually held at:

- the Destiny Restaurant, on Rand Road, in Des Plaines,

- Philly's in the shopping center at the corner Rt. 83 and 53rd St. in Willowbrook,

- The Great Escape, on Irving Park Road, Schiller Park

and at other restaurants.

Add a Plectron or Motorola Alert
Desktop Monitor Receiver
to Your Scanner Collection

by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in part on CDROMS, in bulletin boards, networks, or publications which charge for service without permission of the author.]

In the 1960s and 1970s, thousands of firemen and ambulance squad members came to rely on their crystal controlled, transistor Plectron and Motorola desktop monitor receivers. They have now been replaced by battery operated portable pagers, and the desktop models are often available at hamfests in the $5 - $25 range. Since many are in rough condition and need repair, a hamfest special is better suited for hobbyists who like to fix their own radios.

Plectron and Motorola crystal controlled receivers are excellent for dedicated monitoring of local frequencies -- a task for which you wouldn't want to tie up your 400 channel programmable scanner. They are desktop models which can be powered from 117VAC or 12VDC with the proper mobile cord. The audio quality of a Plectron P1, Plectron 700 series, and Motorola Alert Monitor is far better than any consumer grade scanner and the sensitivity, image rejection, and intermod immunity is outstanding when aligned properly.

The Plectron and Motorola Alert monitors are single band receivers: VHF-low, VHF-high, or UHF. No single Plectron or Motorola Alert monitor can cover the entire 30-50 MHz band, so there were versions optimized for each portion of the VHF-low band. There were different versions to cover low and high "splits" in the VHF-high band, too. For example, low band R8000s come in 30 - 35, 35 - 39, 39 - 49, and 49 - 54 MHz versions. There are two VHF high band versions of the R8000: 148 - 158 and 158 - 175 MHz.

VHF-low band Motorola Alert monitors come in two splits: 30 - 42 and 42 - 54 MHz.

Although UHF versions of the 700 series were made, they are somewhat rare and coverage is limited to 470 MHz and below.

Plectron made several models with dozens of different options. Both the original P1 and later 700 series are suitable for restoration, although I prefer the newer 700 models. The 8000 series were even newer and very desireable, but they are difficult to find at hamfests. The Plectron 500 "economy" series is less desirable.

The P1 series have black cabinets with a blue-green and silver color scheme used on the front panel. They were made in the Chief (tone decoder & carrier squelch), Patrol (carrier squelch only), and Sentry (tone only) models. The Sentry models lack a carrier squelch and therefore are of little use to hobbyists except for scavenging parts. Model number and frequency information appears on a gummed label on the rear panel:

Band (MHz) Chief Patrol Sentry

_____
25-54 R19 R15 R17
148-174 R20 R16 R18
450-470 R23 R21 R22

Table 1. Plectron P1 models

The R700 series have black cabinets with brown front panels and are slightly smaller than the P1 receivers. R700s were made in the Chief (tone decoder & carrier squelch) and Patrol (carrier squelch only) models:

Band (MHz) Chief Patrol

_____
25-54 R719 R715
148-174 R720 R716
450-470 R723 R721

Table 2. Plectron 700 models

The R8000 series are much smaller than the P1 and R700 and are housed in metal cabinets of various colors. The R8000s use the same MC3357 IF/detector/squelch IC used in crystal scanners, but their crystals are not interchangeable with ordinary scanners. R8000s were made in the Chief (tone decoder & carrier squelch) and Patrol (carrier squelch only) models:

Band (MHz) Chief Patrol

_____
30-54 R8190 R8150
148-174 R8200 R8160

Table 3. Plectron 8000 models

The Plectron FM Receiver/Recorder is a collector's item. It is essentially a 700 series Chief receiver with a built in cassette tape recorder. The recorder is carrier activated and can tape transmissions while the receiver is unattended. A connector on the rear panel allows for all kinds of remote control possibilities.

I use two Plectron P1s and four R700s in my living room, seven R700s down the basement, and several Plectrons and Alert Monitors stored in reserve. The basement Plectrons are turned on automatically when someone walks downstairs. Power to them is controlled by a modified Radio Shack Safe House infrared motion detector, originally sold as an intrusion alarm.

When a rescue squad member from Missouri advertised a number of Plectrons on USENET, I bought them -- all 20+ of them. I cleaned, fixed, and restored each one. After recrystalling them on local frequencies, I distributed them to members of my scanner club who were glad to get them.

Both brands of receiver require special crystals. I sometimes use Radio Shack's generic 3rd overtone scanner crystals in the Plectrons but they oscillate on frequencies far away from their marked frequencies. That's because the Plectron oscillator is designed to be used with a crystal which oscillates on its fundamental, not overtone, frequency.

AC power cords for both types of receivers use unique connectors and are scarce. You can buy them new but it's much cheaper to drill a hole on the rear panel and attach a permanent a power cord. Make sure you use a grommet in the hole to prevent the metal chassis from chafing the line cord.

Many Plectrons and Alert Monitors were equipped with an internal NiCd battery pack, intended to power the receiver if the AC power fails. It's unusual to find a used monitor receiver with the NiCd pack still capable of holding a charge. More often, the batteries have died and the series charging resistor has overheated and burned. Be sure to remove the dead batteries as they often leak.

If you find the squelch on your Plectron 700 series receiver has too much hysteresis, replace R96, a 180K resistor, with a 560K resistor. On the P1, the resistor is designated R81.

I have not used the Plectron tone alerting features so I cannot address that except to say that the special coils and capacitors for the dual tone decoders vary depending on the tone frequencies and are somewhat difficult to obtain.

Repair service for the Plectron P1 and R700 models is offered by:

Woodson Electronics
Plectron Place
P.O. Box 960
Imboden, Arkansas 72434

telephone 1-(501)869-7985

Some replacement parts are currently available from Federal Signal in University Park, IL, phone (800)524-3021. You can also get Plectron repairs and parts from:

Northeast Communications
4 Oak Ridge Rd
Newfoundland NJ 07435
201-697-8804

Alert Monitor parts are available from Motorola. Phone (800)972-3226.

Plectrom SM-series Scanning Receivers

Plectron also sold an SM series of scanners, manufactured in Japan by the same folks who made Craig (division of Pioneer) scanners. The SM series are consumer-grade models and are included in this article for the sake of completeness. They are crystal controlled radios and feature priority scan and a separate trimmer capacitor for each channel to net the crystals on frequency.

Band Frequency Limits

VHF-low 30 - 50
VHF-high 150 - 174
UHF 450 - 470 MHz

Table 4. Plectron SM Model Band Limits

Model	UHF	VHF-high	VHF-low
SM-301	X	X	X
SM-302	X	X	
SM-303	X	X	
SM-304	X	X	

Table 5. Plectron SM Models

The crystals used in the SM series are quite different from the crystals used in the conventional single channel Plectron monitors. Here are the crystal formulas:

VHF low band:
crystal 3rd overtone freq = receive freq + 10.7 MHz

VHF high band:
crystal 3rd overtone freq = (receive freq - 10.7 MHz)/3

UHF band:
crystal 3rd overtone freq = (receive freq - 10.7 MHz) /
10

Other crystal specifications for the SM series are:

CR 25/U holder
3rd overtone
20 pF load capacitance
parallel resonant
max series resistance 40 ohm
max drive 2 mW

I currently have no Plectrons or Motorola Alert Monitors
for sale. I'm hoarding them. :-)

REPAIR TIPS: BEARCAT SCANNER RADIOS

Copyright 1993 - 1997 by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. It is posted twice monthly on the USENET
groups rec.radio.scanner, alt.radio.scanner,
sci.electronics.repair, and rec.radio.info. It is also
available electronically from the rec.radio.scanner ftp
archive on the official USENET FAQ library
ftp://rtfm.mit.edu/pub/usenet-by-group/rec.radio.scanner.
The author writes a monthly "Scanner Equipment" column for
Monitoring Times magazine, published by Grove Enterprises,
but views expressed in this article are his own.]

Introduction

The original Bearcat scanner line was manufactured by
Electra Company, a division of Masco Corp of Indiana. In
the mid 1980s, Uniden, a Japanese company, bought out the
Bearcat scanner line and Uniden's first Bearcat scanner was
the BC800XLT model.

Most of the models discussed in this article are
base/mobile units made by Electra during the 1970s and
1980s although some of the capacitor failures occur in the
Uniden BC800XLT, too.

Electra stamped all of its scanners with a manufacturing
date code on the rear of the cabinet. The code is comprised
of a single character (C = Cumberland, Indiana, P = Puerto
Rico), followed by four digits denoting year and week the
radio was built. For example, "P8422" denotes the radio was
made in the Puerto Rico factory during the 22nd week of
1984.

One way to roughly estimate a radio's age is to examine the
4 digit date codes often stamped on the integrated
circuits. The radio must have been made after the most

recent date stamp.

Schematics, Owner's Manuals, and Parts Available

The re-incorporated Electra Corporation is able to effect repairs on some older (pre-Uniden) Bearcat scanners. They sell crystals, antennas, power cords, owner's manuals ($11 ea). Electra Corporation is located at 11915 E. Washington St., Cumberland, IN 46229. Phone 317-894-3229.

To order a user manual for an Electra/Bearcat scanner from Uniden, call (800)235-3874 extension 2553.

Some schematic diagrams may be obtained from Uniden/Bearcat's parts department, (800)297-1023. Uniden currently charges a flat rate of $54 for scanner repairs. They will repair and return "out of warranty" items without an estimate unless the repair charges exceed the flat rate charges.

The phone number for repair is (800)297-1023, too. I recommend you call repair before sending the broken scanner. Items for repair via UPS (include receipt if still under warranty) are usually sent to:

Uniden America Corp.
4700 Amon Carter Blvd.
P.O. Box 95002
Fort Worth, TX 76155

If Uniden doesn't have a schematic, try obtaining a Photophacts from Howard Sams Publishing division of Prentice-Hall at (800)428-7267.

G & G Communications (telephone (716)768-8151) is a family owned company which repairs scanners and stocks parts for several older models, especially Electra/Bearcat and Regency brands, but they don't sell manuals or schematics. They are located at 9247 Glenwood Drive, LeRoy, NY 14482. (http://www.iinc.com/ggcomm/ or email ggcomm@iinc.com or ggcomm@aol.com)

Common Construction

Most of the classic, metal-cased Bearcat base/mobile models were built using two printed circuit boards:

1. a "radio board" containing the synthesizer, RF, IF, and audio stages, and
2. a "feature board" containing the microprocessor controller and memory circuitry which gave each model its own personality.

Although there are various vintage radios boards, they all have similar circuitry.

Bad Solder Joints Common

Before addressing specific symptoms, circuit boards in the malfunctioning scanner should be inspected for poor solder joints.

The Electra/Bearcat BC350, BC300, BC250, BC220, BC20/20, BC211, BC210, and BC210XL models were hand assembled, and every one I've serviced had several connections that were either soldered poorly, or not soldered at all.

Resoldering joints on the ribbon cable connecting the RF and keyboard logic circuit boards in a BC250 attenuated the microprocessor/synthesizer hash noise noticeably.

A Bearcat 20/20 was experiencing periodic loss of memory on some, but not all channels. When the problem occurred, the frequencies on some channels would be completely changed. On other channels, the frequency would still be intact, but the channel would be locked out, and the delay toggled from "on" to "off". Some channels were not affected.

The 2 "AA" memory backup batteries, and their holder, tested good. Much time was spent tracing logic, heating and cooling components, and making voltage measurements.

One of the secondary leads from the power transformer was connected to the main circuit board through a hole drilled through foil traces on both the top and bottom sides of the board. A close examination revealed that this lead had been soldered only on the top of the board - the bottom side had never been soldered.

Soldering the lead on both sides of the board solved the memory loss problem.

Symptom: Blank Display

The BC300 scanner, and several other Bearcat models, employ a switching type power supply stage to generate plus and minus voltages in excess of 20 volts DC. When this switcher fails to function, the display goes blank, but the squelch control appears to work, and white noise can be heard in the speaker.

In almost a dozen of the BC300 and BC800XLT scanners I've fixed, C98, a capacitor in series with the primary of the switching transformer failed, causing the output of the supply to drop below the level needed to power the display. The switching transformer is mounted on the RF circuit board, and is much, much smaller than the main power transformer, which is usually fastened to the metal

chassis. The 22uF/16V capacitor used for C98 in early BC300s was marginal, and was replaced with a 47uF/25V capacitor in later units.

Paul Grohe replaced a failed C98 with a low ESR (equivalent series resistance), high frequency, switching regulator grade capacitor, e.g. a Panasonic HF series capacitor. He also recommends adding a 0.1 ceramic capacitor in parallel with C98.

I replaced the 22 uF capacitor in the switching power supply stage of a BC210XL which caused the same symptom. Other capacitors in the switcher stage have failed. C114, a 4.7 uF/35V tantalum capacitor failed in at least one BC250, causing the display to blank.

A more sinister problem affects the switcher in earlier models. The switching supply stage in the BC250 and original BC210 is driven by a clock signal derived from a custom Exar NC57902 divider integrated circuit (designated IC6 in the BC250 scanner). I've seen this divider IC fail in several BC250s, causing a blank display (except for a decimal point in the BC250's rightmost digit). This custom IC is no longer available from Uniden.

Failure of IC9, the 9 volt NJM78M09A regulator in a BC800XLT is another cause of a blank display.

Symptom: Invalid Frequency Displayed

A common Bearcat 250 malady is manifested by an invalid frequency displayed on the readout. This condition is temporarily "cured" by unplugging the AC line cord from the wall, then replugging it. This condition is symptomatic of a power supply problem in which Q204, a Texas Instruments TIP-29 located on the feature circuit board, fails.

A Philips ECG291 will work as a substitute for the TIP-29. Don't try a Radio Shack substitute, it hasn't worked. See Martin Toomajian's article, "Bearcat 250 Erratic Display Cure", in January 1987 Monitoring Times.

A similar problem in the Bearcat 20/20 was discussed previously in the section on bad solder joints.

Symptom: Squelch Won't Eliminate White Noise

Most Uniden/Bearcat base/mobile scanners feature an AUTO squelch position, actuated by rotating the squelch knob fully counter clockwise. The BC350 used a separate pushbutton switch for this purpose. These scanners use a flimsy potentiometer (designated R81 in BC300s) internally mounted on the RF circuit board, to set the level of signal

required to open the squelch when in the AUTO position. This pot also has an effect on the squelch action in the non-AUTO mode, and determines at which point the squelch knob must be positioned in order to silence the radio.

Although the potentiometer is adjusted at the factory, changes in component values due to aging often necessitate readjustment of this internal pot. Misadjustment of this pot has been the cause of "no squelch" complaints in two BC300s and a BC250 I fixed.

Another squelch failure is due to a blown transistor that acts as the electronic switch in the squelch circuit. I replaced this transistor in only one BC300, so I don't know if this is a common problem.

Symptom: Scanner Completely Dead

In Bearcat scanners using an internal power supply (e.g., BC350, BC250, etc.), the main power transformer is connected directly to the AC line. Since the on/off switch is on the secondary side of the transformer, current flows in the primary as long as the AC line cord is plugged into an active AC outlet. These transformers contain an internal circuit breaker, not visible without unwinding (destroying) the transformer. The internal breaker is known to fail prematurely in a batch of Bearcat power transformers.

If your scanner is completely dead, check the primary of this transformer for an open circuit condition.

Symptom: Keyboard Bounce

After much use, the Chromerics keyboards in Bearcat scanners start to wear out. The first sign of trouble is usually keyboard bounce on the most frequently used key, e.g., the MANUAL key. Replacement keyboards are usually available from UNIDEN, but replacement requires dexterity, as one must take care not to tear the flat, flexible strip connecting the keyboard to the logic board.

Symptom: Keyboard Completely Unresponsive

The keyboard matrix is "scanned" by the microprocessor. Another problem is when none of the keys seems to function; the receiver just keeps scanning in spite of key depressions. I found this condition in a BC210XL scanner owned by a heavy smoker. Perhaps nicotine smoke was to blame, as the resistance between two input port pins on the microprocessor was down to about 1000 ohms, fooling the microprocessor into believing that a key was stuck in the "down" position. Scraping the circuit board between the

two pins with an X-Acto knife fixed the problem.

Uniden/Bearcat BC200XLT Portable
Loss of Audio and Dial Lamp

If you can program frequencies into your BC200XLT but there is no audio and the green backlight no longer functions, a tiny transistor may have failed.

Check for a defective PNP surface mount transistor, Q201 (2SB815B6-YDY). Q201 is used as a switch to furnish 8 VDC to several stages of the BC200XLT. Its main purpose is to switch off power hungry stages of the BC200XLT when the CPU thinks the NiCd voltage has fallen below a threshhold. That's an attempt to limit the current drain on weak NiCds to avoid permanent damage.

Q201 is located on the foil side of the "Micom" board, adjacent to the black multi-pin connector which mates the Micom and main boards together.

Q201 can be destroyed by a few different causes, primarily, by something in the scanner drawing too much current through it. In one case, capacitor C36 shorted. It's a 220 uF 10v electrolytic, located on the component side of the main board, connected from pin 8 of the audio IC (IC2 NJM386SL) to ground. Capacitor C55 shorted in another BC200XLT. In a pinch you bypass Q201 by soldering a short piece of bare wire between the collector and emitter, but you must first fix the component which caused Q201 to fail.

BC9000XLT: Loss of Sensitivity

John Ward has fixed two BC9000XLTs which suffered from "low sensitivity." He fixed the solder joint where the antenna jack connects to the circuit board. In both cases the tab from the board was on the opposite side of the jack from where the little blob of solder applied at the factory was located.

It was an intermittent problem that depended upon the position of the antenna cable - if the weight of the cable placed tension on the jack in one direction contact was made and the radio worked fine. If the cable placed tension on the jack in the opposite direction contact was lost and so was reception. The gap was barely noticeable.

Other Problems

Complaints of low audio output and occasional microphonics in three Uniden/Bearcat 800XLTs were caused by a bad 47 ufd electrolytic capacitor in series between the external speaker jack and audio amplifier.

Andy Domonkos reports he often uses a tape recorder
connected to a Uniden/Bearcat BC890XLT. RL-1, the carrier
activated relay inside the BC890XLT wore out. Andy found
the identical relay sold at Radio Shack (part #275-232) and
says the BC9000XLT uses the same relay, too.

library ftp://rtfm.mit.edu/pub/usenet-by-
group/rec.radio.scanner.]

Abstract

This article contains product review summaries for more than
70 old and new scanner radios and monitor receivers.

The author writes a monthly "Scanner Equipment" column for
Monitoring Times magazine, published by Grove Enterprises,
but views expressed in this article are his own.

Introduction

At last count, there were over 140 scanners and monitor
receivers of various brands in my collection. This article
describes a few of the FM receivers in my collection, and
other models I've tested. It is not meant to be complete.

For more information about old scanners, see:

1. "Confessions of a Scanner Collector," by Bob Parnass,
Monitoring Times, August 1988.

2. "Scanner Collector Primer," by Bob Parnass,
Monitoring Times, May 1995.

I have published full length reviews and modifications of
these scanner models in Monitoring Times magazine:

Mar 1986 - Uniden/Bearcat BC800XLT
Mar 1987 - Radio Shack PRO-2004

Oct 1990 - Radio Shack PRO-2006
Jan 1995 - Radio Shack PRO-2035 vs. Radio Shack PRO-2006
Feb 1995 - Radio Shack PRO-62 Portable
Mar 1995 - Uniden/Bearcat BC9000XLT
Apr 1995 - Uniden/Bearcat BC3000XLT Portable
May 1995 - Uniden/Bearcat BC860XLT
Jun 1995 - Uniden/Bearcat BC890XLT & Radio Shack PRO-2036
Jul 1995 - Radio Shack PRO-2037
Aug 1995 - Radio Shack PRO-26 vs. Uniden/Bearcat BC3000XLT
Sep 1995 - Radio Shack PRO-60 Portable
Oct 1995 - AOR AR-2700 Portable
Nov 1995 - selected AOR AR-8000 measurements
Dec 1995 - Radio Shack PRO-2040
Feb 1996 - Radio Shack PRO-2042
Apr 1996 - Uniden/Bearcat BC220XLT, BC230XLT Portable
Jun 1996 - modifications & tips for the Uniden/Bearcat BC9000XLT
Jul 1996 - Uniden/Bearcat BCT-10 mobile
Oct 1996 - Radio Shack PRO-2046 mobile
Dec 1996 - AOR AR5000
Jan 1997 - ICOM R8500
Feb 1997 - Radio Shack PRO-2045
Mar 1997 - ICOM IC-R10
Apr 1997 - RELM HS-200 portable
May 1997 - Uniden/Bearcat BCT7 virtual downconversion mod.
Jul 1997 - Uniden/Bearcat BC235XLT portable Trunktracker
Aug 1997 - Radio Shack PRO-64 portable

Note: Reprints of Monitoring Times articles are available for $3.00 each plus a self-addressed stamped envelope from Grove Enterprises, 7540 Highway 64 West, Brasstown, NC 28902, tel. (800)438-8155. I don't receive any part of this reprint fee.

AOR

AR2700: 1995 vintage. 500 channel portable covering 500 kHz to 1300 MHz. Lots of good features, e.g., 10 linkable search banks, lighted keypad, per-channel attenuator, S-meter, battery meter, optional voice recorder and speech inversion descrambler. Global rescan and pause delays, but no auto store, data skip, nor battery saver. Internally generated noise results in broad birdies on AR2700 tested. Insensitive carrier operated (vs. noise operated) squelch stays closed on signals unless they are moderately strong, causing scanner to skip transmissions of interest. IFs are 287.55/749.25, 58.05, 10.7/0.455 MHz. See "The AOR AR-2700 Portable Scanner," by Bob Parnass, AJ9S, in Monitoring Times, October and November 1995.

AR5000: 1996 vintage. approx. 30 kHz - 2600 MHz coverage super receiver. Good sensitivity throughout. AM, SSB, CW,

FM detectors. Frequency readout to 1 Hz. More features than any other radio. DTMF reader and RS-232 interface included. Multiple settings for IF and AF selectivity, attenuator, AGC, deemphasis, etc. DB9 RS232C connector. Negatives include low contrast LCD display and difficult user interface. NFM squelch closes slowly, causing noise burst at end of each NFM transmission. Electromechanical relays click at various frequency boundaries, including 400 MHz, producing a clickety-clack noise -- annoying while scanning banks of mixed band frequencies. Great radio, otherwise. See "AOR's AR5000 All-in-One Receiver," by Bob Parnass, in Monitoring Times, December 1996.

ICOM

R-10: late 1996 vintage (serial number 01048 tested). Shirt pocket size multimode is powered by 4 AA penlight cells. Covers 0.5 to 1300 MHz (minus cellular). NFM, WFM, USB, LSB, AM, and CW detectors included. IF bandwidths are fixed. No 30 kHz bandwidth for satellite or FM military monitoring. Battery saver circuit, with selectable duty cycle. Single VFO and 1000 memory channels. There are 900 memory channels divided into 18 banks of 50 channels each. Another bank of 100 channels used to hold unique frequencies found during an auto store operation. 20 pairs of search limits. Up to 100 frequencies may be locked out during a search and stored in a final bank of 100 channels which is cleared before subsequent auto store searches. Each channel can be programmed with the detector mode (e.g., AM, USB), a tuning step size, an attenuator enable flag, and an 8 character label. CI-V computer interface requires extra cost hardware. 7 segment S-meter. Noise blanker. Good sensitivity. Lighted keypad and display, but keystroke sequences are cumbersome.

Good radio hardware in a handy sized package, but scanning performance unimpressive. Very slow memory scanning at only 6 channels/second. Searches at about 16 steps/second, with little or no worthwhile improvement using the "Signal Navigator" feature in the R10 I tested. Rescan delay cannot be disabled. Can only scan one memory bank or all banks, not a combination of banks. No squelch for SSB or CW modes. See "ICOM IC-R10 Receiver," by Bob Parnass, in Monitoring Times, March 1997.

R-7000: 1986 vintage. At about $1000, this was once the top VHF/UHF receiver. 99 channel, multi mode coverage from 25-2000 MHz with a small gap at 1000-1025 MHz. Memory can be expanded to 198 channels by adding simple switch to pin 19 of memory IC8. Tuning knob lets you tune through parts of the spectrum much easier than using the SEARCH mode on

conventional scanners. Selectable USB/LSB allows reception of new amplitude compandored sideband (ACSB) stations. S-meter doubles as discriminator meter to aid tuning. Useful search and store feature, reminiscent of the the Bearcat 250, searches between 2 limits and automatically stores new frequencies into channels 80-99. Audio and control interface for tape recorder. Noisy relay, activated when the receiver is tuned to frequencies above 520 MHz. Searches and scans slowly but can be sped up to about 12 cps by adding a resistor. Too big for permanent mobile use, but too nice to leave alone in the car. If you don't want to spend $1000, get a Radio Shack PRO-2004/5/6 instead.

R-7100: 1992 vintage. At about $1300, this is the Cadillac of VHF/UHF receivers. 900 channel, multi mode continuous coverage from 25-2000 MHz. The radio RF/IF/AF portions of the R7100 are similar to the older R7000, but the R7100 is constructed using surface mount parts. Both the R7000 and R7100 are much more immune to intermod than the Uniden/Bearcat 760XLT and the portable PRO-43. The firmware in the R7100 is much more sophisticated. 9 banks of 100 channels. Further, you can associate each channel with 1 of 10 groups. Many possible ways to scan. 10 pairs of search limits. Search and store ("memory write") scan mode lets you store 100 frequencies instead of the 20 in R7000. Another R7100 improvement is that you can program up to 100 channels for the R7100 to skip while searching. R7100 has 2 VFOs ("windows"). Both the R7000 and R7100 scan slowly compared with PRO-2004 and PRO-2006, and that's a drawback. Both the R7100 and R7000 employ a noisy relay, activated when the receiver is tuned to frequencies above 520 MHz. Scanning a mixture of VHF and UHF frequencies serenades the ICOM user with a very annoying clickety-clack, clickety-clack! For Baseband Audio out, I mounted an RCA jack on the back of the R7100A and connected it via shielded cable to the junction of resistors R228 and R230 on the Main Unit. This point is located in the vicinity of IC15 and X3 on the schematic.

R8500: 1996 vintage. 100 kHz - 2000 MHz coverage. 20 banks of 40 channels although bank sizes can be changed. 100 Auto store and 100 Skip memories but that can be increased by reallocating channels from the conventional scan banks. Fixed and programmable step sizes. Relays clickey-clack while scanning across band boundaries. Triple conversion, First IF is 48.8, 778.7, or 266.7 MHz, depending on band. Second and third IFs are 10.7 and 0.455 MHz. Weak to moderate cellular images starting near 1106 MHz. Rugged construction. External power supply. DB25 RS232C connector. Audio peak filter. Ok scanning and great searching performance. See "ICOM R8500 Receiver," by Bob

Parnass, in Monitoring Times, January 1997.

UNIDEN/Bearcat and Electra/Bearcat

Bearcat III (Electra): 1976 vintage. 8 channel crystal controlled scanner. Requires optional front-end circuit board for VHF-low, VHF-high, and UHF bands, but only 2 boards can be installed within the radio at the same time. Two crystal filters. No aircraft band coverage nor rescan delay. Front mount speaker sounds good. Strong local oscillator radiation often causes interference with other scanners in the same house.

Bearcat IV (Electra): 8 channel crystal controlled scanner. Newer version of Bearcat III but contains front-end circuitry for VHF-low, VHF-high, and UHF bands. Better selectivity than Bearcat III or 12 due to having three instead of two 10.8 MHz IF filters. No aircraft band coverage. Front mount speaker sounds good. No rescan delay.

Bearcat 5 (Electra): 1979 vintage. Eight channel economy base model covering VHF-low, VHF-high, and UHF bands. 117 VAC only. No track tuning. Black plastic cabinet.

Bearcat 6 (Electra): Six channel VHF-low and VHF-high bands. 117 VAC only. Wood covered particle board cabinet.

Bearcat 8 (Electra): Eight channel VHF-low, VHF-high, and UHF bands. 117 VAC only. Wood covered particle board cabinet.

Bearcat 12 (Electra): 1979 vintage. One of the last decent crystal controlled scanners. 10 channels. Variable scan speed up to 20 ch/sec. Single delay on/off switch. Front mount speaker sounds good. Manual contains schematic. Single conversion, 10.8 MHz IF. Selectivity is poorer than programmable models, like the 300, allowing adjacent channel interference. Covers VHF-low, VHF-high, and UHF bands but no aircraft band coverage. Crystal positions must be arranged by band.

Bearcat 15 (Electra): 1983 vintage. Actually made for Electra by competitor GRE (General Research Electronics). The only Bearcat crystal controlled base/mobile scanner offering 118 - 136 MHz AM aircraft band. 10 channels.

BC101 (Electra): 1975 vintage. First Bearcat synthesized unit. 16 channels, no priority. Frequency programmed in binary by setting toggle switches on front panel after looking up code in code book. No frequency readout. Uses custom IC for CPU, now discontinued, so factory authorized service is no longer available. I have four of these units.

DC operation requires optional mobile power supply.

BC100 (Electra): First programmable portable scanner. Be prepared for at least one repair in the first year. Early units, with threaded antenna connector, have high frequency of repair, particularly LCD readout, keyboard, and battery holder. No battery backup. Poor case design in early units caused battery to disconnect from radio, resetting microprocessor and clearing memories. No priority channel or aircraft band. Some people swear by the BC100, others swear at them.

BC210 (Electra): 1979 vintage. First Bearcat scanner with a keyboard and numeric display. LED readout. See US patents 4,092,594, granted 5/30/78 and 4,114,103, granted 9/12/78 for further insight.

BC220 (Electra): 1979 vintage. 20 channels. Reasonable number of features but 20 channels doesn't seem enough. Service Search for Marine and Aircraft. See US patent 4,270,217, granted May 26, 1981. LED readout. Good scanner, but tinny audio.

BC20/20 (Electra): 1981 vintage. Similar to BC220 but with 40 channels and different CPU circuitry. A maximum of 20 channels can be scanned at one time. Reasonable number of features. Service Search for Marine and Aircraft. LED readout. Good scanner, but tinny audio.

BC250 (Electra): 1976 vintage. 50 channel model, rich in features, but lacks aircraft band and 144-146 MHz. Search and Store feature extremely useful for finding federal frequencies. Clock. High frequency of repair. Power transistors not heat sinked adequately, causing heat damage to surrounding components and circuit board. Failure of Q204 on the feature board known to cause odd display readings. Digital circuitry very sensitive to glitches caused by static and AC line spikes. Avoid 1978 or earlier vintage units. All BC250s use custom ICs (e.g., IC6, a divider chip, mfd. by Exar), which are now discontinued, so factory service is no longer available from Uniden.

BC260 (Electra): 1983 vintage. Super heavy duty metal cabinetry and lit controls, aimed at mobile use for firemen, police, etc. Few frills, only 16 channels, no aircraft, but generous coverage of federal bands omitted in the older Bearcat scanners. Good sensitivity. Lots of audio. Good internal construction. Backlit keyboard allows operation in the dark, but the keyboards on some units require high pressure to operate. Brightness control for display and keyboard, but multiplexor circuitry for vacuum fluorescent display produces audible whine which may be annoying in a

quiet room. Backlighting may fail in some units due to poor contact on connector used to fasten light panel to front circuit board. 9 volt regulator transistor Q28 (TIP29) may fail, causing blank display while leaving audio intact. Method of connecting an external speaker is awkward.

BC300 (Electra): 1979 vintage. 50 channel top of the line scanner. Service Search feature contains 11 ROM banks of preprogrammed channels See US patent 4,270,217, granted May 26, 1981. Switching power supply failure noted in early units due to insufficient capacitance - component value was changed in newer units. Schematics show at least 100 components changed between earliest and later units. Preset squelch pot, mounted internally on circuit board, misadjusted in new units - adjustment usually required after burn-in period. Good sensitivity. Built in clock. I leave it on 24 hours a day. This is a favorite. See US patent 4,409,688, granted 11/11/83 for further insight.

BC350 (Electra): 1981 vintage. 50 channels in 5 banks. Includes aircraft. Used to be Bearcat's top of the line, overpriced scanner but never very popular. Dual use keyboard and display allowed 8 text characters to be associated with each channel, a feature clumsily implemented, and awkward to use. Units plagued with various hardware problems including bad memory ICs and short life power transformers. Firmware bugs without cures. The BC300 is a much better scanner than the BC350, and at a lower price.

BC760XLT (Uniden): Also sold as BC950XLT through Scanner World. Small, mobile scanner supplied with mounting bracket and wall wart AC power supply. Some of the keys are backlit. 100 channels in 5 banks. Service search. Earlier version has Motorola type antenna jack and AA battery backup. Later version has BNC antenna jack and internal lithium battery. Can be fitted with optional CTCSS decoder. Hyper sensitive and easily overloaded by strong signals, especially when used with outdoor antenna in base applications. Conventional 10.8 MHz IF prone to images. Television audio heard in some places.

BC800XLT (Uniden): 1985 vintage. 40 channels in two banks. Covers 806-912 MHz, as well as of vhf, uhf, and aircraft bands. Receives 10 meter fm and all of 6 meters, as well as federal portions of vhf and uhf bands. Fewer birdies on vhf-lo band than other scanners. Scans and searches very fast. Clean, robust audio output. Extremely sensitive, but very prone to overload by strong signals when connected to outdoor antenna. Too much play (hysteresis) in squelch adjustment - can be improved by changing one resistor.

Positive terminal in memory backup battery holder installed backwards in early units, allowing memory loss when scanner unplugged from AC outlet. Tunes in increments of 12.5 KHz on 800 MHz band, whereas cellular telephones are on 30 KHz channels. See "The Bearcat 800XLT ... an Owner's Report," by Bob Parnass, in Monitoring Times, March 1986.

BC860XLT (Uniden): 1995 vintage. 100 channel table top unit. Can lock out 10 channels during search. Good performer except for images. See "The Uniden Bearcat BC860XLT," by Bob Parnass, AJ9S, in Monitoring Times, May 1995.

BC890XLT (Uniden): Same as Radio Shack PRO-2036. Tuning knob. 200 channels, global delay. Count, AUX, and Auto Store features. Scans and searches fast. Accepts optional CTCSS board. Dual conversion with 10.8 MHz and 450 kHz IF -- lots of images and birdies. Prone to severe intermod, especially when used with an outdoor antenna. See "The Uniden BC-890XLT and Radio Shack PRO-2036," by Bob Parnass, in June 1995 Monitoring Times.

BC9000XLT (Uniden): 1995 vintage. High quality base using up-conversion. 500 channels in twenty banks. Up to 250 channels can be programmed with alpha labels. Tuning knob. Selectable AM, NFM, WFM modes. Optional CTCSS decoder. Very fast scan and search. Can lock out 50 channels during search. Delay and attenuator independently programmable for each channel. Effective Auto Store feature stores unique frequencies. Good RF section, but not as robust as PRO-2004/5/6. IFs are 380.7/254.4, 58.075, 0.455 MHz. One urban user, located within a couple of blocks of several high power transmitters, reports severe desense problems. For a full review, see "The Uniden Bearcat BC9000XLT," by Bob Parnass, AJ9S, in Monitoring Times, March 1995. For tips and modification information, see my column in June 1996 Monitoring Times. See US patents 4,947,456, granted 8/7/90, 5,163,161, granted 11/10/92 and 5,212,817, granted 5/18/93 for further insights into fast scanning and searching implementation.

BC100XLT (Uniden): 1987 vintage. Very good 100 channel portable with 10 priority channels. Unique feature tells whether a given frequency has already been memorized. Generous coverage of conventional bands, including commercial aircraft, but no 800 MHz. Decent leather-like case. Slide-on 550 mAH NiCd battery pack.

BC200XLT (Uniden): 1987 vintage. Also sold as BC205XLT through Scanner World. Very good 200 channel version of BC100XLT portable scanner but includes 800 MHz band. 10 priority channels. Unique feature tells whether a given

frequency has already been memorized. Decent leather-like case. Slide-on NiCd battery pack.

BC220XLT (Uniden): 1995 vintage. Very good 200 portable scanner which is a smaller successor to the BC200XLT. Includes 800 MHz band. 10 priority channels. Service Search, including WX. Up to 10 frequencies can be locked out during conventional search, 20 frequencies from Service Search. Unique feature tells whether a given frequency has already been memorized. 10.8 MHz and 450 kHz IFs, with images 21.6 MHz away. 4 cell BP-120 internal NiCd battery pack. Marketed as BC230XLT with two BP-120 battery packs and CRX-120 dual charger. See "The BC220XLT/BC230XLT Portable Scanner," by Bob Parnass, AJ9S, in Monitoring Times, April 1996.

BC230XLT (Uniden): See BC220XLT.

BC235XLT TrunkTracker(Uniden): 1997 vintage. Portable with 300 channels in 10 banks. Can scan or search in conventional or trunked domains but not at the same time. Scans Motorola Type I, II, IIa 800 MHz trunked systems, but only one trunked system at a time. Programming Type I and IIa systems requires knowing the Fleet Map ahead of time or else using exhaustive trial and error. A query feature identifies duplicate memory channels. Very fast scan and search rates. Scans 64 channels/sec and skips empty channels. Service search. Data skip. Triple conversion, 254.4, 10.85, 0.45 MHz IFs. Excellent image rejection and intermod immunity. Fairly good audio. See "The Uniden Bearcat BC235XLT," by Bob Parnass, AJ9S, in Monitoring Times, July 1997 or an on-line version at www.grove.net.

BC2500XLT (Uniden): 400 channel portable with tuning knob. Plagued by intermod and images. Early units drained batteries quickly even while turned off.

BC3000XLT (Uniden): 1995 vintage. Excellent 400 channel portable with 20 banks. Up conversion. Very fast scan, search, and intelligent Auto Store. Mode, attenuator, and delay settings programmable for each channel. 50 frequencies can be locked out during search. Larger speaker than PRO-26 produces better, crisper audio. NiCd pack provides about 5 hours between charges. See "The Uniden Bearcat BC3000XLT," by Bob Parnass, AJ9S, in Monitoring Times, April 1995 and "The Radio Shack PRO-26 vs. Uniden/Bearcat BC3000XLT," by Bob Parnass, AJ9S, in Monitoring Times, August 1995.

Regency

TMR series: First generation crystal scanners. Come in all varieties of band coverage. Models with both UHF and VHF bands must use separate antennas for each band (disadvantage in mobile installations, but can be overcome by connecting two front ends via a capacitor). Not sensitive enough to cover the entire 30 - 50 MHz range in a single model. There three versions of VHF-low band coverage depending on the part of the 30 - 50 MHz band covered (LL, LM. and LH). TMR scanners use unsocketed incandescent bulbs for channel indicators which require periodic replacement. Easy to crystal: Radio Shack crystals work well. TMRs usually $2 and up at hamfests, often in poor condition. Don't pay more than $50, even if mint. Front ends must be tuned for selected portions within the bands for best sensitivity. Wide IF selectivity troublesome in urban/suburban areas. Primitive digital scanning circuitry may become confused at times. but power off/on restores sanity. Replace aging capacitors in the scanning circuits. You can find a TMR8H eight channel high band unit most often.

TME series: The base versions of the TMR models. Both the TME and TMR models share many common circuits but the base versions contain speakers mounted on the front panel. The most common TME model is the TME8 H/LM eight channel dual band scanner in a metal cabinet with wood coloring.

ACTR series: Replaced the Regency TMR units. By the time Regency made the ACTR units, they no longer offered different models for different parts of the 30 - 50 MHz band. Look for the later ACT series, e.g., ACTR-106 (10 channel tri band) or ACTR20/6 (20 channel tri band), used light emitting diodes for channel indicators instead of incandescent bulbs. Available in 1 to 20 channel models - most are multi band receivers. Somewhat wide selectivity. Not all that bad a deal if cheap.

ACTE series: The base versions of the ACTR series. The ACTE and ACTR circuitry is similar, although the base versions contain speakers mounted on the front panel. The most common ACTE model is the ACTE8 H/L eight channel dual band scanner in a black metal cabinet.

WHAMO-10: Regency's first synthesized scanner. Appearance more like a crystal scanner, with a single LED per channel. User has to break off teeth on a metal 'comb' for each channel according to a code book. See US patent 4,057,760, granted 11/8/77. External frequency control unit DFS-5K optional. UHF VCO reference oscillator drifts on some units. Soldered sheet metal shields around some circuitry make access to some components difficult for servicing. Comb sockets prone to bad connections after moderate use. Not recommended due to maintenance difficulties.

K500: Nice wood-like cabinet. 40 channel model with every feature Regency could dream of in one scanner, except aircraft band. Idle tone bypass feature for mobile phone stations works about 50% of the time. Weather alert feature. Service Search in several banks. Search and Store facility not implemented as well as BC250, but better than none. Built in clock when radio off or in manual mode. Can be programmed out of band. Reasonable performance, but sensitivity could be better. Spring contacts on membrane keyboard may need soldering after prolonged use.

K100: Bare bones version of the K500. 10 channels, no priority feature. Same wood-like cabinet and reasonable performance as K500. Spring contacts on membrane keyboard may need soldering after prolonged use.

M400: 30 channel replacement for K500. Service Search, but no aircraft. Easily programmable out of band. Built in clock when radio off or in manual mode. Backlit keyboard good for night viewing and mobile use but generates RFI into nearby SW receivers. A favorite.

MX3000: 30 channel replacement for M400, but basic features only. Nice lit keyboard, but may cause RFI into nearby SW receivers. Easily programmable out of band, but no aircraft. All 30 channels are in a single bank, and lack of direct channel access make this model more difficult to operate. Good first scanner.

M100: 10 channel unit. Same as MX3000 except different color and fewer channels. Nicely lit keyboard, but may cause RFI into nearby SW receivers.

HX1000: Good, fairly rugged, 30 channel handheld synthesized unit. Generous out of band coverage but no AM aircraft coverage. Built by Azden. Very sensitive on UHF, but annoying audio hiss leaks through speaker when squelched. Belt clip chintzy, but can be directly replaced with better clip from Kenwood TR2600A. Like the MX3000, all 30 channels are in a single bank, and lack of direct channel access make this model more difficult to operate. Low discount price makes this best choice for programmable portable.

HX650/H604: 6 channel crystal portable. Likely made by Sanyo. Same as Fannon and Bearcat Thin Scan units, (except that Bearcat has 10.8 MHz IF frequency, and is harder to get crystals for), but scans faster. Small size and common crystals (available at Radio Shack), make this 1st choice for bare bones portable scanner.

Z60: base/mobile sporting 60 channels, but 10 of them are for FM broadcast only. Built in alarm clock, priority, and memory which requires no battery backup. Covers 30 - 50, 88

-108, 118-136, 144-174, 440-512 MHz. Notice that it's not spec'd to cover some important federal bands: 136 - 144 and 406 - 440.

RELM

HS200: 1996 vintage. Very good 200 channel portable. 10 banks. Built-in CTCSS and DCS decoder. Lighted keypad. Duplicate channel detection. 100 frequencies can be locked out from search. Very good audio and strong front end. Excellent internal shielding. Global rescan delay. Covers CB. Fixed modes and step sizes. IFs are 280.2 and 0.45 MHz, and perhaps one in between. For a quantitative test report, see "The RELM HS-200 Portable Scanner," by Bob Parnass, AJ9S, in Monitoring Times, April 1997.

Radio Shack

PRO-2004: 1986 vintage. Top of the line, wide band scanner for 1987. After a diode is cut, enjoy continuous coverage from 25-520 and 760-1300 MHz, AM, NBFM, and WBFM. Has 300 channels in 10 banks of 30, backed up by conventional 9 volt alkaline battery. Any channel can be designated the priority channel. Scans and searches fast. Lots of well designed features, like 10 pairs of search limits, Lockout Review, default search increment and emission mode. Sound Squelch allows skipping dead carriers during search or scan. Metal cabinet, good internal construction and shielding, but no mobile mounting bracket or DC power cord. Soft touch membrane keyboard. Good sensitivity and selectivity. Very good radio. See "Product Review: The Radio Shack PRO-2004 Programmable Scanner," by Bob Parnass AJ9S, in The Radio Enthusiast, February 1987, and Monitoring Times, March 1987.

PRO-2005: 1989 vintage. Essentially a size reduced PRO-2004 with surface mount components and 400 channels. Some people think the small knobs, smaller display, and plastic cabinet are a setback from the 2004. The smaller size, real rubber keyboard, and vertical front panel make it easer to use mobile, although the keyboard is not backlit. More sensitive than the PRO-2004 but 800 MHz signals leak through into the commercial aero band. Highly recommended. See "Product Review: The Radio Shack PRO-2005 Programmable Scanner," by Bob Parnass AJ9S, in The Radio Enthusiast, June 1989, and RCMA Journal, August 1989.

PRO-2006: 1990 vintage. Essentially the same as PRO-2005 but scans faster. Probably the best scanner made to date. Highly recommended. See "The Realistic PRO-2006," by Bob Parnass, AJ9S, in Monitoring Times, October 1990.

PRO-2035: 1995 vintage wide coverage base made by GRE. 1,000 channels, but cumbersome 100 channel bank size. Tuning knob. Broader IF selectivity than PRO-2006. Poor dynamic range. 10 linkable search banks. Dumb Auto Store feature stores the same frequencies over and over. Wastes time scanning empty channels. See "The Radio Shack PRO-2035 - How Does It Compare With the PRO-2006?," by Bob Parnass, AJ9S, in Monitoring Times, January 1995.

PRO-2040: late 1995 vintage 100 channel base made by Uniden. Fair performance, but minimal image rejection. Local oscillator harmonics account for spurious responses, e.g., reception of cellular telephone calls in the 460 MHz UHF-high band. Scans over 40 channels/sec. Can lock out up to 50 channels from search. "Soft" on/off power switching via keypad. See "The Radio Shack PRO-2040," by Bob Parnass, AJ9S, in Monitoring Times, December 1995.

PRO-2042: 1996 version of the wide coverage PRO-2035 base with improved firmware and amber display. Made by GRE. 1,000 channels, but cumbersome 100 channel bank size. Tuning knob. NFM selectivity is still a problem but improved over PRO-2035. 10 linkable search banks. Smart Auto Store feature stores the unique frequencies. Can lock out up to 200 frequencies from search. Query facility indicates if and in what channel a frequency is programmed. Scan skips over empty channels automatically. Can sort memories by frequency within a given bank. IFs are 609 - 612, 58.05, and 10.7/0.455 MHz. Broader IF selectivity than PRO-2006. Overall, a top grade scanner and second only to Uniden/Bearcat BC9000XLT. See "The Radio Shack PRO-2042," by Bob Parnass, AJ9S, in Monitoring Times, February 1996.

PRO-2045: 1996 vintage. Very good 200 channel base/mobile made for Radio Shack by Uniden. Tuning/channel selector knob. 10 banks, selectable attenuator, and rescan delay. CTCSS-capable with optional board. Great Auto Store. Weather alert. Scans and searches fast. Can lock out 50 frequencies during search. Step sizes fixed but AM and NFM modes are selectable. IFs are 380.7, 10.7, and 0.455 MHz. Images on VHF-high band despite high 1st IF. Some intermod on review unit. See "The Radio Shack PRO-2045," by Bob Parnass, AJ9S, in Monitoring Times, February 1997.

PRO-2046: 1996 vintage 100 channel mobile made by Uniden with fairly good performance. Descendent of the BC760XLT but no CTCSS option available. Ten banks of ten channels. Scans memory at about 34 channels/sec. Service search, direct search, and band search. Preset search limits by band and user cannot program the search limits. Image rejection is minimal, as one would expect from a scanner with IFs of 10.85 and 0.450 MHz. 10 Monitor memory

channels. Can lock out up to 20 channels from a search. See "The Radio Shack PRO-2046," by Bob Parnass, AJ9S, in Monitoring Times, October 1996.

PRO-34: Portable scanner with 200 channels and 800 MHz coverage. Ten "monitor" channels. Operates from AA cells. Slow scanning, low audio output, and chintzy plastic case detract from an otherwise good performance. No decent leather case available from Radio Shack. If you need a portable with 800 MHz, get a Bearcat 200XLT. If you can't get a 200XLT, get a PRO-34.

PRO-2021: Base/mobile scanner. 200 channels in 10 banks, LCD display and raised rubber keys. Lots of memory but scans too slowly and lacks 800 MHz. Ten "monitor" channels. Radio Shack seemed to have an overstock of 2021s as they were on sale for such a long time. Close out price dipped to about $200, which made it a nice scanner for beginners.

PRO-2022: Base/mobile scanner. Like the PRO-2021 but includes the 800 MHz band. Cellular images throughout the 847.6 - 869 MHz range. Includes power saver circuit, odd for a base unit, which can clip the first part of a transmission. See September 1996 Monitoring Times for modifications.

PRO-2036: Same as Uniden/Bearcat BC890XLT. Tuning knob. 200 channels, global delay. Scans and searches fast. Count, AUX, and Auto Store features. Accepts optional CTCSS board. Dual conversion with 10.8 MHz and 450 kHz IFs -- lots of images and birdies. Prone to severe intermod, especially when used with an outdoor antenna. See "The Uniden BC-890XLT and Radio Shack PRO-2036," by Bob Parnass, in June 1995 Monitoring Times.

PRO-2037: 1994 vintage. Triple conversion all plastic base scanner made by GRE. Home version of the PRO-62 portable but with more intermod. 200 channels in 10 banks, one search bank, selectable AM and FM. Uses up conversion circuitry but inadequate front end filtering still allows images, though not as bad as in 10.7 or 10.8 MHz IF circuits. Crisp, respectable audio given the top mounted speaker. See "The Radio Shack PRO-2037," by Bob Parnass, in July 1995 Monitoring Times.

PRO-2001: Early, single bank 16 channel programmable. Reasonable coverage of the 3 traditional bands, minus aircraft band. LED digital display as well as an LED per channel. Mechanical lockout switch for each channel. Delay is either on or off for all channels at a time. High synthesizer noise level. Troublesome plated through holes on digital board in some units renders radio virtually

unfixable. Could never get mine to work more than a few days in a row; always another bad connection. Some owners have no trouble.

PRO-52: 8 channel VHF-Lo/Hi base unit. No UHF band or provision for mobile operation. Good little scanner despite limited frequency coverage and Spartan lack of frills. Crisp squelch action and good audio, helped by a front mounted, vertical speaker.

PRO-2003: Radio Shack's 1986 top of line. 50 channels + 10 FM commercial broadcast band channels. Includes aircraft. Good frequency coverage and functionality, but at a high price. Poor human engineering: difficult to read keyboard makes the PRO-2003 hard to operate unless in a well lit room. Keyboard label coloring improved on newer units. Rather slow scan rate and high price. Although there are provisions for 12VDC operation, the cabinet shape and lack of mounting bracket makes mobile operation impractical. Scan rate only 8 channels/sec vs. 15/sec in Regency and Bearcat. Causes RFI: Plastic case permits scanner to radiate signals into nearby receivers.

PRO-43: Very good portable made by GRE. First Radio Shack portable with up conversion, and 222 MHz ham and 225 - 400 MHz military air band coverage. 200 channels, single search range. Small, convenient size. Muffled audio. Speakers in early units known to fail and more powerful speakers were used in later units. 800 MHz band coverage fully restorable in early units by removing diode. Uses same 6 cell battery tray as other high end GRE portables. Subject to interference in 160 - 162 MHz range.

PRO-60: 1995 vintage. Very good portable made by GRE. 200 channels, single search range. Similar features and same IFs as the PRO-43 it replaced but the PRO-60 has wider frequency coverage and crisper audio. Covers 75 MHz and commercial FM broadcast bands. Improved Direct search can be stepped manually in single steps. Uses same 6 cell battery tray as other high end GRE portables. Railfans take note -- the PRO-60 and PRO-43 are subject to interference in 160 - 162 MHz range. Draws 100 mA while scanning. See "The Radio Shack PRO-60 Portable," by Bob Parnass, AJ9S, in Monitoring Times, September 1995.

PRO-26: 1995 vintage. (Not to be confused with a simple 1985 crystal controlled portable bearing the same model number.) Very good portable made by for Radio Shack by Uniden. 200 channels, very fast scan/search. Good display. Covers all TV channels, but spectrum adjacent to cellular phone band is censored which prevents monitoring parts of some trunked systems (e.g., IL State Police district 4). Up to 50

frequencies can be skipped during search. Limited image rejection causes 929 MHz paging interference in 170 MHz range. IFs are 380.7/254.4, 58.075, and 5.5/0.455 MHz. Audio suffers from small speaker. See "The Radio Shack PRO-26 vs. Uniden/Bearcat BC3000XLT," by Bob Parnass, AJ9S, in Monitoring Times, August 1995.

PRO-62: 1994 vintage. Good portable 200 channel scanner using up conversion. Similar to PRO-43 but no military air band, different upper frequency limit, and slightly different IFs. Selectable AM/NFM modes. Better intermod immunity than PRO-43. See "The Radio Shack PRO-62," by Bob Parnass, AJ9S, in Monitoring Times, February 1995.

PRO-64: 1997 vintage. Good portable 400 channel scanner using up conversion. Replaces PRO-62 and has many more features. Selectable AM/NFM modes but fixed step sizes. 10 search banks which can be cascaded. Auto store saves unique frequencies found during a search. Frequencies can be loaded using a computer but optional interface kit not yet available. Can recharge Radio Shack's optional, monolithic NiCd pack, but not AA cells within the scanner. IFs are 257.5, 21.4, and 0.455 MHz. See "The Radio Shack PRO-64," by Bob Parnass, AJ9S, in Monitoring Times, August 1997.

PRO-30: 16 channel programmable portable with aircraft band. Good frequency coverage. Extra controls on top allow control of SCAN, MANUAL, and PRIORITY functions while worn on belt. Good belt clip. Low audio output. Plastic case prone to break at BNC antenna connector under severe use, vs. metal frame in Regency HX1000. High price, no discounts or sales yet. I had 6 or 7 PRO30s, having to return them several times during the 1 year warranty, although other owners have had little or no trouble. Troubles included oscillation in IF stage, no UHF band reception, case broken around base of antenna connector, etc.

PRO-24: 1983 vintage. Only 4 channels in this crystal controlled portable. Covers the three basic bands, but no aircraft. Easy to obtain batteries and crystals. Characteristic Radio Shack squelch problem, fixable by changing one resistor. All-plastic case larger than Bearcat Thin Scan and clones. See "The Radio Shack PRO-24 Scanner," by Bob Parnass, excerpted in the "Technical Topics" column, RCMA Newsletter, February 1984.

Craig (division of Pioneer)

4530: Japanese 10 channel crystal controlled 3 band unit. Also available under Plectron name but in different cabinet. No aircraft band. Deluxe features like priority, trimmer capacitors for netting each channel, front panel speaker,

and rugged metal cabinet make this unit a winner. Channel lockout slide switches have finite life. Replacing burned out incandescent channel lamps not fun. Grab a 4530 if you find one in good condition.

Sonar

Sonar made several crystal controlled scanners and channelized monitor receivers which shared the same RF circuitry. Each radio was housed in the same size metal case and worked on both 120 VAC and 12 VDC. The models differed in the number of channels, the band coverage, and whether individual channels could be locked out.

Although they used a 10.7 MHz first IF, Sonar radios require parallel resonant crystals different from the common series resonant crystals used in Regency and Radio Shack scanners. Some Radio Shack crystals will work in Sonar units, but more often they oscillate a few kHz off frequency and are unsuitable unless changes are made to the oscillator circuitry. Therefore, beginners should avoid these radios. Typical Sonar squelch has long time constant causing a long noise burst at the end of each transmission.

FR-104, FR-105: 6 channel monitor receivers covering 25 - 50 MHz or 150 - 175 MHz. Manual channel selection, i.e., no scanning. Early models are identified by an 11 pin connector on the rear and they could be used with an optional NiCd battery pack and charger which bolted to the rear panel. Later models used Cinch Jones connectors with flat contacts. Optional tone decoder board.

FR-2512, FR-2513: 24 channel versions of the FR-104 and FR-105 monitor receivers. Manual channel selection, i.e., no scanning.

FR-2514, FR-2515: 8 channel scanners. Channel 1 priority. Recommend you avoid these models as there is no way to lockout a channel from the scan sequence.

FR-2526, FR-2526, FR-2528: 10 channel scanners covering various combinations of 3 bands. Each channel could be locked out. Channel 1 priority.

Sonar Model	#chan- nels	VHF low	VHF high	UHF scans?	lock- outs?
FR104	6	X			no
FR105	6	X			no
FR2512	24	X			no
FR2513	24	X			no
FR2514	8	X		yes	no
FR2515	8	X		yes	no

FR2516 10 X yes yes
FR2517 10 X yes yes
FR2525 10 X yes yes
FR2526 10 X X yes yes
FR2527 10 X X yes yes
FR2528 10 X X yes yes

Table 1. Summary of Sonar base/mobile monitor and scanner receivers

Tennelec

Manufactured the first synthesized scanners. See US patents 3,961,261 and 3,962,644, granted 6/1/76 and 6/8/76 respectively. Company went out of business several years ago. Schematics and parts difficult to obtain. Radios reputed to be poor performers. Got my MS-2 and MCP-1 basket cases for free and sometimes regret taking them. Not worth fixing unless you have access to DTL/RTL chips and circuit diagrams.

Plectron and Motorola Alert Monitor Receivers

In the 1960s and 1970s, thousands of firemen and ambulance squad members came to rely on their transistor Plectron and Motorola Alert monitor receivers. They have now been replaced by portable pagers, and are often available at hamfests in the $5 - $25 range. Since many are in rough condition and need repair, a hamfest special is better suited for hobbyists who like to fix their own radios.

Plectron and Motorola Alert crystal controlled receivers are excellent for dedicated monitoring of local frequencies -- a task for which you wouldn't want to tie up your 400 channel programmable scanner. These radios are fixed channel units and do not scan. They can be powered form 117VAC or 12VDC with the proper mobile cord.

The audio quality on a Plectron P1 or 700 series is far better than any consumer grade scanner and the sensitivity and intermod immunity is outstanding if aligned properly. Better image rejection than most scanners (see article by Bob Parnass in Monitoring Times, January 1996 for comparison). The Plectron 500 series is less desirable. The Motorola Alert monitors are pretty good, although the audio lacks bass.

No single Plectron or Motorola Alert monitor can cover the entire 30-50 MHz band, and there were versions optimized for each portion of the band. There were different "split" models to cover segments of VHF-hi band, too. Although UHF versions were made, they are somewhat rare.

Both brands of receiver require special crystals. I sometimes use Radio Shack's generic 3rd overtone scanner crystals in the Plectrons but they oscillate on frequencies far away from their marked frequencies. That's because the Plectron oscillator is designed to be used with a crystal which oscillates on its fundamental, not overtone, frequency. Too, the P1 and R700 require different crystals.

If you find the squelch on your Plectron 700 series receiver has too much hysteresis, replace R96, a 180K resistor, with a 560K resistor. On the P1, the resistor is designated R81.

Repair service for the Plectron P1 and R700 models is offered by:

Woodson Electronics
Plectron Place
P.O. Box 960
Imboden, Arkansas 72434

telephone 1-(501)869-7985

Some replacement parts are currently available from Federal Signal in University Park, IL, phone (800)524-3021. For more information, see "Add a Crystal Receiver to Your Arsenal," by Bob Parnass, January 1996 Monitoring Times.

Custom Color Map & Report
of Transmitter Sites Near You

As I have already done for hundreds of radio enthusiasts, companies, government agencies, and organizations across the country, I will locate FCC licensed and selected FAA and CAP transmitter sites in an area of your choice, in any state, and produce a custom RadioMap(TM) report, including a beautiful 8-1/2" by 11" scaled color map, protected by plastic. The map is marked with transmitter sites, cities, highways, airports, military installations, national parks, etc.

The graphical nature of RadioMap allows you to identify antenna sites and visualize the transmitter locations in your neighborhood, near your office, and other places of interest -- from VLF through microwave. The report lists frequencies, callsigns, and licensee names. RadioMap covers police, fire, local government, TV, business, industry, common carrier, railroad, trucking, and many more types of transmitter sites, excluding ham radio stations. Wireline and nonwireline cellular phone and AM/FM broadcast transmitter sites are clearly marked using unique color icons.

Industrial customers use RadioMap reports to survey the "radio environment" prior to installation of radios and

wireless microphones at customer sites. RadioMap is used by the maritime and broadcast industries, as well as ham radio operators to solve intermod interference problems, and has been very favorably reviewed in RCMA Scanner Journal, American Scannergram, and USSN.

The RadioMap processes and software are unique and proprietary. Unlike "more tame" maps, RadioMap shows the locations of military bases, ammunition plants, arsenals, weapons factories, and other military installations.

For a flat fee, you choose the center location, and I choose the range, depending on transmitter site density:

suburbs: 5 mile range (100 sq. mi. area)
rural areas: 10 or more miles (400 sq. mi. area)
dense urban area: 1 - 2 mile range

Longer ranges for additional charge - call for pricing.

A custom RadioMap report costs $24.95 plus $5.00 shipping and handling. For an additional $4.00, I will include a custom frequency allocation histogram, a 0 - 1,000 MHz "spectrum analyzer-like" display showing spectrum usage by the transmitters in the map coverage area. Send check or money order payable to Bob Parnass for $29.95 for standard or $34.95 for deluxe RadioMap report with histogram. Include your name, address, and telephone number, along with center location (nearest intersection of 2 streets, or latitude & longitude) and mail to: Bob Parnass, 2350 Douglas Road, Oswego, IL 60543. tel. (630)554-3839 6-10 PM central time. For a brochure, send SASE.

How to Obtain Copies of Patents

Printed copies of US patents may be purchased for $3 each, but you must know the patent number. Credit card orders are taken over the telephone by the Assistant Commissioner for Patents at (703)305-4350. Alternatively, you can mail a check or money order, made payable to "The Assistant Commissioner for Patents" to

The Assistant Commissioner for Patents
Washington, DC 20231

For more information about the US Patent and Trademark Office, call their automated information message system toll-free at (800)786-9199.

There are various patent servers on the world wide web, including IBM's server:

REPAIR TIPS: RADIO SHACK SCANNER RADIOS

Copyright 1997 by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. It is posted twice monthly on the USENET
groups rec.radio.scanner, alt.radio.scanner,
sci.electronics.repair, and rec.radio.info. It is also
available electronically from the rec.radio.scanner ftp
archive on the official USENET FAQ library
ftp://rtfm.mit.edu/pub/usenet-by-group/rec.radio.scanner.
The author writes a monthly "Scanner Equipment" column for
Monitoring Times magazine, published by Grove Enterprises,
but views expressed in this article are his own.]

Introduction

Radio Shack has been selling scanners and monitor receivers
under the Realistic and Radio Shack labels for over 30
years. Most of them were manufactured by General Research
Electronics of Tokyo, though many newer models are
manufactured by Uniden.

The date of manufacture is usually printed on a gummed
label on the scanner as well as the cardboard box. A code
of 12A5, means the scanner was made in the 12th month of
1975, 1985, or 1995, for example.

There's another way to date Radio Shack scanners
manufactured by Uniden. The first digit of the long serial
number is usually the last digit of the year of
manufacture.

Another way to roughly estimate a radio's age is to examine
the 4 digit date codes often stamped on the integrated
circuits. The radio must have been made after the most
recent date stamp.

Schematics, Owner's Manuals, and Parts Available

Service manuals for most Radio Shack scanners may be ordered through your local Radio Shack store.

If Radio Shack doesn't have a schematic, try obtaining a Photophacts from Howard Sams Publishing division of Prentice-Hall at (800)428-7267.

Parts lists for recent models are available on line at: http://support.tandy.com/support_electronics/2849.html. Parts may be ordered through Tandy National Parts, telephone (800)442-2425 or (817)870-5600, or through your local Radio Shack store

G & G Communications (telephone (716)768-8151) is a family owned company which repairs scanners and stocks parts for several older models, especially Electra/Bearcat and Regency brands, but they don't sell manuals or schematics. They are located at 9247 Glenwood Drive, LeRoy, NY 14482. (http://www.iinc.com/ggcomm/ or email ggcomm@iinc.com or ggcomm@aol.com)

GRE-Built Base Models: Dim Backlight

The backlight in many base models, including the PRO-2022, PRO-2004, and PRO-2005/6 is implemented by an electroluminescent panel, which grows dim with use.

The EL panel used in the PRO-2005 and PRO-2006 is designated EL-501, and is identified by Radio Shack part #10800050. A new EL panel can be ordered through your Tandy National parts (see above) or local Radio Shack store and sent to your home. Radio Shack no longer sells replacement EL panels for the PRO-2004.

Replacing the backlight is an operation which requires care and patience. Purchase a service manual, and study the exploded parts diagrams as you read the following steps.

Top and bottom cabinet pieces must be removed, then the speaker unplugged from the main board. The front panel assembly must be removed from the chassis by removing 4 flat head screws, 2 on each side. You need not disconnect all the wiring harnesses, though you might have to unplug one so it won't get in the way of a hot soldering iron.

Unsolder the bare ground wire soldered to a large shield on the back of the front panel, located near the back of the squelch control. Two ground braids must be temporarily disconnected by removing the screws which fasten them to the chassis. After removing the volume and squelch knobs, you must remove 8 small screws which fasten the plastic front panel to the diplay board.

The old EL panel is fastened by a bead of glue and two foil type leads soldered to the display board. It's easier to cut the two leads from the old EL panel before unsoldering. A sharp knife should be used cut away the glue. The old EL panel can then be slid gently out from behind the LCD display.

The new EL panel can be installed by reversing the process, though I found that it is not necessary to glue the new panel. The two foil leads must be soldered using a minimum of heat. Reassemble the pieces in reverse order of disassembly.

GRE-Built Portables: Worn Out Keypads

The keypad on late model GRE-made Radio Shack portables, e.g., PRO-39 and PRO-43, can become unreliable after prolonged use. The best repair is to replace the rubber keypad instead of trying to restore contacts using chemicals. A replacement rubber keypad may be ordered inexpensively through Tandy National Parts or your local Radio Shack Store.

PRO-43: Loss of Audio

Early PRO-43s were built with a 200 mW speaker (mfr's part #EAS-3P123A). The voice coils in some of these speakers have opened, resulting in lack of audio output, though audio is still available from the earphone jack. A more capable 500 mW speaker is available through Tandy as replacement (EAS-3P127).

PRO-43: Freezup

If you attempt to lock out all 20 channels in a memory bank, then scan only that bank, your PRO-43 will freeze up and be placed into a catatonic state. Use the procedure documented in the PRO-43 user manual to fully reset the scanner. This will "break the trance," but all the memory channels will be cleared.

MAKE A FORTUNE - AND THIS IS THE ABSOLUTE TRUTH!

IF YOU HAVE READ THIS FAR YOU HAVE ALREADY PROVED IT WORKS!!

TAKE JUST 5 MINUTES TO READ THIS AND SEE.

This is the newest updated version.
As I was surfing the net, I read all these postings on how you can make over $50,000, even $800,000. Well I believe that if all goes well, and you follow the rules EXACTLY, it will work. Just follow the instructions given in this letter, and you to can make over $800,000, perfectly legally according to USA Post Office Laws (read on for specifics).
Don't look at this as a scam, but rather a true-to-life example to test the above statement. It will only cost you $6 dollars plus 6 stamps, and a few hours of your time. Thus, there is some effort involved, because nothing in life is absolutely free. Are you ready and willing to accept that you deserve to receive a fair amount of ? If so, please continue reading. But if you think this is just another scam, I suggest that you don't try it.

PLEASE NOTE: THIS IS A 6-PERSON LIST, NOT THE USUAL 5.
PLEASE DO NOT TRY TO CHEAT THIS PROGRAM. JUST ADD ONE NAME AND REPOST THE ARTICLE. IF YOU DO NOT IT WILL NOT WORK, AND YOU WILL BE REMOVED
FROM THE LIST! FOLLOW THESE DIRECTIONS AND JOIN US IN A GREAT OPPORTUNITY!

The program has been revised and you will notice six names instead of five.
The reason for this is the flood of five name programs and the sixth name will add $50000 to $100000. This is proven mathematically and in my bank account. I never really thought that this program would work, but IT DOES and it will for you too. Just be patient and follow the directions exactly.

Print this article now, so you have all the information for your version.
Remember to keep the names right. Let's go!

STEP 1

Invest your $6 by writing your name and address on six separate pieces of paper along with the words:

"PLEASE ADD ME TO YOUR MAILING LIST".

(In this way, you are not just sending a dollar to someone; you are paying for a legitimate service.)
People have asked me if this is really legal. It is! You are using the Internet to advertise your business. What is that business? You are assembling a mailing list of people who are interested in home based computer and on-line businesses and methods of generating income at home.
Remember - people send you a small fee to be added to your list. It is legal. What will you do with your list of thousands of names? That's up to you, but this is how it becomes legal. To be legal you must actually sell a product or service if you expect to receive a dollar. Anyone sending a dollar back to you must receive something in return. You have already received this letter due to the participation of each of the 6 persons listed below. This letter and the plan given within this letter are a "product" that you have received. Thus, you will be sending $1.00 to each of the 6 persons given below in exchange for receiving this letter and for asking them to provide the "service" of adding you to their mailing list.
THIS IS A SERVICE AND IS A 100% LEGAL BUSINESS OPPORTUNITY WHICH I COVERED IN TITLE 18, SECTION 1302 AND 1342 OF THE POSTAL AND LOTTERY LAWS.
Now, please follow the given steps exactly to receive your desired amount of :
Immediately send $1 US cash (a one dollar bill, no checks, no orders) to each of the 6 people on the list below. Wrap this dollar in a note with the words: "Please put me on your mailing list." (In this way, you're not just sending a dollar to someone, you're paying for a legitimate service.)

Also, to discourage those who prey on cash in the mail, be sure the bill is completely hidden by the note. A woven envelope is recommended. Include your address. You do not need to include your name. This is the key to the program! Also, let each person know what number they are in your letter so he/she knows which cycle he is receiving the $1.00 from. Make sure that you
retain EVERY name and address sent to you, either on computer or hard copy, but do not discard the names and notes that people send to you. This is PROOF that you are truly providing a service, and should the IRS or some other government agency question you, you can provide them with this proof
Therefore, you will start a list of all the people who send you a dollar requesting to be added to a mailing list. Actually, you will want to safeguard this list because it can generate even better responses and much more later!
Fold a $1 bill inside each paper, and mail them by standard mail to the following six addresses:

1) Lindsey W.
736 Shivel Ln.
Huntington, WV 25705

USA

2) Rudolfs Osins
Aspazijas 37-4
Jelgava, LV 3001
Latvia

3) J. DiMauro
89 East Squire Dr. Apt. 1
Rochester, NY 14623
USA

4) D.Brottlund
1588 Nokomis Dr.
Colo Spgs, CO 80915-2605
USA

5) S. Bhattacharjee
11008 Hard Rock Road
Austin, TX 78750-1552
USA

6) Daniel Thompson
492 W. 600 N.
Spanish Fork, Ut 84660
USA

STEP 2
Now remove the top name from the list, and move the other names up. This way #6 becomes #5 and so on. Put your name in as the #6 on the list (Remember to take #1 off and change the numbers so #2 becomes #1, #3 becomes #2, #4 becomes #3, #5 becomes #4 and #6 becomes #5 and you become #6.)

STEP 3
LET ME TELL YOU HOW MUCH YOU CAN MAKE.
How do the numbers work for potential income earnings? Assume for the sake of example that you get a 7.5% return rate. This is very conservative; my first attempt was about 9.5%, and my second was over 11%.

1. You send out 200 letters, and 15 people (7.5% x 200) will send you $1 each. $15.00

2. Those 15 send out 200 letters each, and 225 people send you $1 each. $225.00

3. Those 225 send out 200 letters each, and 3,375 people send you $1 each. $3,375.00.

4. Those 3,375 send out 200 letters each, and 50,625.00 people send you $1 each. $50,625.00

5. Those 50,625 send out 200 letters each, and 758,375 people send you

$1 each. $759,375.00

TOTAL $813,615.00!! If those figures sound incredibly high, figure that even with half the return rate, or even a quarter, the total is still spectacular. It works every time, but how well will depend on how many letters you send. In the above example you mailed out 200 letters.
This sounds like "pie in the sky," but the numbers add up, and with over 40 million people on the NET, it works! TIP: For an even greater return, post to MORE than 250 newsgroups initially; try for 300-350. When your name drops off a list, simply access another message from a newsgroup and start the process over again.
Post the new article to at least 250 newsgroups. remember, the more you post, the more people see, and the more you get. There are at least 25,000 newsgroups at any one time.
This is a $7.92 investment. It takes about a week or so to start seeing a return- so be patient. The should flow for about 3 months. At that point, simply add your name to the list and start over.
I've done this three times and now I can quit my job and start investing in real estate full time. I assure you this can work.
If you mailed out 500 letters, you could have received even more!
Check the math yourself, but I guarantee it's correct. With this kind of return, you have got to give it a try! Try it once, and you'll do it again. Just make sure you send a dollar to each of the addresses on the list above with a note asking to be added to their mailing list.
Together we will all prosper and we will be able to share our wealth with those less fortunate than ourselves.

GOOD LUCK!!
GENERAL STEPS ON AUTOMATING THE PROCESS

If you have Netscape 3.0 do EXACTLY the following:

1) Click on any newsgroup like normal, THEN click on 'TO NEWS', which is on the far left when you're in the newsgroups page. This will bring up a box to type a message in.
2) Leave the newsgroup box like it is, CHANGE the subject box to something flashy, like,..
3) Tab once and you should be ready to type. Now, retype (only once) THIS whole article WORD FOR WORD, except insert your name at #6, and remove #1 off the list, plus any other small changes you think you need to make.
Keep almost all of it the SAME!
4) When you're done typing the WHOLE article, click on FILE in THIS BOX, RIGHT ABOVE SEND, NOT WHERE IT SAYS NETSCAPE NEWS ON THE FIRST BOX.
Click on SAVE AS when you're under FILE. Save your article as a text

file to your C: or A: drive. DO NOT SEND OR POST YOUR ARTICLE UNTIL YOU DO THIS. Once saved, move on to number 5 below.
NOTE: If you don't want to type in the whole article by hand, AND you

know how to use a plain text editor (like Notepad), you can edit the file ahead of time, then attach it as shown in step 6.
5) If you still have all of your text, send or post to this newsgroup now by just clicking send, which is right below FILE, and right above Cc:
6) Here's where you're going to post all 200. OK, click on any newsgroup then click on 'TO NEWS', again in the top left corner. Leave the NEWSGROUPS BOX alone again, put a flashy subject title in the SUBJECT BOX, hit TAB once you're in the body of the message. Click on ATTACHMENTS, which is below the SUBJECT BOX. You will get another box to come up. Click on ATTACH FILE, then find YOUR file that if you did this right, you should see your file name in the attachments box, and it will be shaded green.
NOTE: If you don't want to type in the whole article and you know how to use a plain text editor (Notepad), you can edit the file ahead of time, then attach it.
IF YOU USE I.E. EXPLORER IT'S JUST AS EASY...HOLDING DOWN THE LEFT MOUSE BUTTON, highlight this article. Then press the "ctrl" key and the "c" key at the same time to copy this article. Then print this article for your records, to have the names of those you will be sending $1 bills to.
2) Go to the news groups and press "post an article". A window will open. Type in your headline in the subject area and then click in the large window below. Press "ctrl" and then "v" and the article will be placed in the window.

If you want to edit the article, do so and then highlight and copy it again. Now every time you post the article in a new newsgroup all you have to repeat is "ctrl" and "v" and press post.
3) That's it. Each time you do this, all you have to do is type in a different newsgroup, so that way it posts to 200 DIFFERENT newsgroups, or more.

You see? Now you just have 249 to go!! (Don't worry, each one takes about 30 seconds, once you get used to it.
REMEMBER 250 IS THE MINIMUM. But the more you post the more you will receive.
AND THAT'S IT!! THEY ARE ONLY STEPS!!!

(this is a later addition for extra ease of posting)
EXTRA TIPS:-

(ONLY) IF YOU ARE CONFIDENT WITH YOUR COMPUTER YOU CAN AUTOMATE YOUR POSTINGS (and prevent spamming) AS FOLLOWS: (THIS Replaces the previous section only i.e. 'GENERAL STEPS ON AUTOMATING THE PROCESS') (using Netscape):

As you are reading this message click on "file" - "save message as", enter a filename in the 'save as' dialog box, press "enter".
Now open "Notepad" (usually from "start" - "programs" - "accessories") and open the message ("file" - "open") you just saved. (You will

find it in the same folder you saved it and you may also find it
has a '.html' file extension). Then edit the letter EXACTLY as you
have been directed above. Just make sure you delete the
'system-message'
that appears at the top so that it makes sense when you read it!
Click on "edit" - "select all" (all the
text should now be highlighted) then again "edit" - "copy".
Leave Notepad alone for now and return to the Netscape News program:
Click on "options" - "show all newsgroups".
Now select (subscribe to) whichever groups you think are suitable by
moving down the entire listing and clicking in the appropriate empty
boxes. Once you have finished click "options" - "show subscribed
newsgroups".
Now simply click on the first group you want to post to, to highlight

it. Then choose the group about 10 further on and WHILE HOLDING DOWN
THE SHIFT KEY click on it. Next click on "file" - "new news message".

A message box will appear and after entering the "flashy" subject
line,
position the cursor in the main message area.
Click on "edit" -"paste"; the message will appear.
NOW CHECK IT!!
When you are satisfied everything is correct click "send" and it will
be
sent to all 10 groups. Now repeat as many times as you need- very
simple!

PLEASE NEVER post to many more than 10 with any one message since
the resulting long lines of newsgroup listings at the top of EVERY
message will annoy many AND will vastly reduce the effectiveness of
your posting.
JUST ONE OTHER THING:
Let's remember that there are many people far less fortunate than
ourselves who will never be able to afford a computer and hence
will be unable to join in our enterprise. Therefore please consider
donating a (significant) portion of your earnings from the venture
to charity.
NOTE - "edit" - "copy" is exactly the same as pressing "ctrl" with "c"
"edit" - "paste" is exactly the same as pressing "ctrl" with
"v"

I have one nice Pro-2021 Scanner. Covers 30 - 54; 108 - 136; 138 - 174; 410 - 512mhz. 200 Memory channels. The light panel is dim (has been since I got it last year, doesn't cause a real problem for me). Memory battery cover is missing. Otherwise this unit works great. I am looking to trade for something different. Suggestions in the list below are not the only things I am looking for. Write back with an idea for trades.
Heres a list:
MAgnavox D2999 Sw reciever
Sangean ATS 803; 818 or 818-c SW Reciever
Realistic Pro-44 handheld scanner
Realistic Pro-2026 Mobile scanner
Regards,

I have been using AEA's ACARS decoding program for about 2 years but for some reason it now will not let me turn on the log function to save the sessions. I tried to call AEA but apparently they have moved from thier WA location. Does anybody that decodes with AEA's program have an answer or a suggestion ? Thanks...

I just picked up the pro 51 today also, took advantage of the sale price. What you're hearing are cell phone frequency images. That happens because of the non selective front end receive of the unit. The new radio shack units with triple conversion are not able to do this because of the third stage filtering.

I'm not complaining though, the unit is great the price was right and the images are an added bonus for me . :-)

Hi,
I've just spent *all* day trying to find some info on DDI and how to use, but to no avail. If someone could please email the info on how to make a cable and the software, I'd be very grateful.
Or, if you know of a web site that has the info, as www.l0pht.com/radiophone has gone down temporarily and I need the software and info ASAP.

Cheers for your help.

You most likely are hearing cell images, over 900Mhz. In Oregon, one of
the Radio Shack stores even demonstrates that this can be done. The last
Pro-51's sold that can be "Tricked" into direct cell reception were sold
in 1994

They were also totalitarian, which has nothing to do with socialism. You
can't separate the effects of one from the other in the USSR. But look
at countries like France or Sweden -- every bit as democratic as the US,
but more socialistic. And their citizens get better health care at all
levels (not just the rich), have lower infant mortality, longer life
expectancies, higher level of literacy, and far lower crime rate.

: > : 3. Socialism unchecked by individual freedom becomes tyrannical
: >

Perhaps you'd be more comfortable living where there is no government,
since you seem to advocate anarchy. Let's see, Rwanda, Sierra Leone,
Sudan come to mind. Or perhaps, since you hate society so much and seem
to detest being asked to play by the rules, your own little desert island
would be more your cup of tea.

Well the Pro-25 has been discontinued and is impossible to find... at least in my district. I'm not sure about the 43 but it's probably gone too. Look for the Pro-51 that's discoed to $189.99(originally $299.99) and the Pro-60 that's discoed to $199.99(originally $379.99). I work for the shack so I'll post the scanners that are going on sale in advance. The next add we have coming up has no scanners on sale. The one currently out has a ton though.

In article <5rrop4$3kd@dfw-ixnews11.ix.netcom.com>, jetguy1@ix.netcom.com says...
>
> I am considering placing the Optoelectronics OS535 board in my >Pro-2035 scanner. I am wondering which of the available programs (i.e. >Scancat, Probe, Radio Manager ect.) has worked well for others who have >performed this mod? Appreciate any information! Brent >jetguy1@ix.netcom.com

For the OS535 it is Probe hands down. Go to www.altavista.com and do a search on "+probe +scanner" or go to www.dejanews.com and do a search on the previous posts in this newsgroup. There is also a great mod for programming all 1,000 channels from your computer and it only costs about $12 bucks. Go to http://www.geocities.com/SiliconValley/Way/1522/ and pick up this information. I can program my 2035 in under 18 minutes...and that is all 1,000 channels completely filled.

Your best bet is to get something OLDER and used. Like with all OTHER consumer electronic devices, they get built cheaper and crapier every year. The old Uniden 200XLT will do circles around the sportcat in sound quality, and you can see and feel the quality in this unit.

You will have no problem finding one used within your price range.

I need to thin the heard a little bit:

Pro-2004 scanner. 25-1300 mhz, no cell block. Speed mod done,
400 channel mod done also. No box or manual. $200 I ship.

Uniden BC-2500xlt handheld 400 chanels, 25-1300 mhz. No cell
block. Comes with leather case, antenna, manual 4 rechargeable
batteries but no charger or box. $175 shipped.

AOR AR-2515. 2000 channel base communications receiver.
5-1500mhz, no cell block. AM,FM,WFM. Comes with computer interface.
$300 shipped.

Please e-mail replies to kg5un@juno.com
No COD's.

Thanks,
Ed Maikranz

Or, if the unit is still under warranty (you DID get the 5 year
warranty, didn't you?) take it to any RS, wait a week or so and collect
your working scanner. Happened to my PRO-25 - twice.

What you are listening to is Digital Encryption, similar or the same as
is used by the FBI, Secret Service, etc. As far as ways to decode it,
good luck. You need the encryption key, which is one of 720 million or
so different codes. Then once you got this "key", you would need a
descrambler to feed it to. I don't think you'll find one, because the
ECPA made that type of device illegal.

Not unless you stole the scanner from the store... :-)

Seriously though, I have wandered thru many a mall, amusement park and Wal-Mart with a scanner on my hip, and never got one complaint. I wasn't even using an earphone. Some of the employees even asked me where they can get one.

Frequencies:
Most stores use the itinerants in the vhf-hi band (I don't have the exact frequencies, as I am at work right now - most books including Police Call Plus have them listed in the back.). These are used because they only need the 2 watts those frequencies allow to reach the whole store, so they don't need to license them.

Malls and such: If the mall has a radio shack, stop in. A lot of times the demo scanners will have the mall's frequencies and/or someone there will know them. If that fails try searching between 464.0000 and 474.000 in about 2 to 5 mhz chunks. I usually find them within a few minutes. Usually I will try to find a security guard and stand nearby so I can hear his radio, too, which makes the process faster.

If anyone has the specific frequencies, post em! If not I'll share mine on Tuesday. (Yes, I take three day weekends - pthththththth!!!!)

Hope that will at least point you in the right direction....

Well, first the obvious - you may have a 900 Mhz phone. I assume the radio is OK - You do pick up other frequencies, right? The phone works too, right? (Sorry for the stupid questions - I used to work in tech support) Maybe try a different antenna, if possible?

Assuming everything is in order, your mode should be NFM with 12.5 khz steps (I think - not sure on the steps)

I had a PRO-10 but it was a programmable! You've got a genuine antique
on your hands there.

I don't think RS sells crystals anymore - I had one of their crystal 2
channel jobbies SEVERAL years ago. The crystals sold for $5.00 each back
then. I've seen them posted for sale in here once in a while.

P.S. If you're a Phoenix area local, let me know where you got it. I
love to collect old radios. (My wife hates 'em, maybe that's why I do
it...:-))

No question, find a used R-9000.
Then, supplement it with any scanner you feel will add those particular features the R-9000 doesn't have, like trunk-tracking.
This will take a lot of money, though. :-)

> cell conversation CONSTANTLY.
>
> Anybody have any idea what causes this? Could this be harmful to my
> scanner?
It sounds like you are suffering from intermodulation.
There are always more than one signal entering your scanner's antenna.
Normally, they are of all about a level that the front end(s) can handle
them normally. High powered pager signals are examples of signals that
can be too high for the front end(s) to handle correctly. When this
happens, the strong incoming signal overpowers the front end(s), and
enters the tuning stage along with the signals normally there, and these
signals combine (intermodulate). Quite often, a resultant, new signal
will have the characteristics of only one of the two combined signals,
especially if one of the signals isn't modulated (an open mike, as in
your example). Thus, by chance, you get another signal that's not tuned
to, loud and clear.
This is different from an image, which is always there, by design of the
IF's.

Ci sono per caso appassionati di scanner in Italia che seguono questo Newsgroup? Vorrei condividere con loro impressioni, conoscenze tecniche e tutto quello che riguarda questo hobby nell'ambito locale. Personalmente ho trovato questo Newsgroup estremamente interessante, e talvolta ho partecipato a qualche discussione, ma molti argomenti sono legati alle aree geografiche ed alle norme locali. Per questo faccio un appello. Preferisco ricevere le risposte (se ce ne fossero) tramite Newsgroup. Grazie, Giovanni.

Are there scanner enthusiasts in Italy reading this Newsgroup? I want to share with them impressions, technical knowledge, frequencies and everything else having local impact about this hobby . I've found this Newsgroup extremely interesting, and sometimes I partecipated to discussions, but many topics are pretty focused by geography or by local regulations, thus I'm giving a call. Answers by Newsgroup (if any) are preferred. Thank you. Giovanni.

aka
glenq@cyberhighway.net
grhansen@usa.net

This award goes to Glen because of his great skill and prowess in the
art of malice, and attacking the persons he disagrees with
rather than the issue.

Why not use your great intellect to enlighten and help others understand
rather than
seeking to castigate and flame them? Why don't you look in the mirror
some time
and ask yourself " Why does 90% of my post contain insults and abuse".
You said
it yourself search dejanews. You will see what 90% of your post contain.

It is well document in Psychology that individuals with very low
self-esteem find power
in abusing others weaker than they are.

What we are seeing here is a classic case of a Bully. i.e. <"crude,"
"lewd," and hostile>

FCC License Data Sources
Bill McFadden
billmc@agora.rdrop.com

Changes preceeded by "|". Please e-mail corrections and additions to me.

INTRODUCTION

This is a list of FCC license data sources available to scanner hobbyists. The FCC master contains a wealth of data about every non-government license in the United States (over three million records). Most of the sources listed contain a subset of this data, although a few contain all or nearly all of it. Government licenses are not administered by the FCC, and the data is not available to the public.

Also available are subscrition services from companies like ISI and CET. Since they charge by the minute, they are not really practical for the hobbyist and hence are not included in this list.

Prices are rounded to the nearest dollar and include shipping, if known.

C.E.T.

CET sells records of all stations inside a 30-mile radius for $80. (Major cities cost extra.) A 70-mile search costs $178. The data is provided on floppy disks and is available in ASCII columnar and comma-delimited formats.

CET does not provide data for licenses that do not contain specific geographic coordinates (i.e., mobile-only systems) or specific operating frequencies (e.g., amateur radio).

To do the search, CET requires the latitude and longitude of the center of the 30-mile radius. I calculated mine from a USGS topographic map I obtained at a local nautical supply store. Alternatively, you can obtain the coordinates for your town from the University of Michigan's geographic name server. Run "telnet 141.212.99.9 3000" and enter your zip code. For my area, the server returned the coordinates of the main post office.

CET can be reached at 800-445-0297.

| FCC
|
| The database is also available from the FCC for free. It covers most
| services but not all. Sections can be downloaded, processed with a
| supplied Visual BASIC program, and viewed with Microsoft Access. The
| entire database is approximately 3 GB in size. See:
|
| http://www.fcc.gov/oet/info/database/raeddf.html

GROVE

Grove sells FCC data on CD-ROM and floppy. The CD-ROM covers the entire US and is available with or without mapping support. The mapping version brings up a map with the requested station plotted on it. The regular version is $104, and the mapping version is $174.

Floppies are available by state for $44 per state (add $10 for CA, FL, TX). The disk comes with a database search program. Grove Enterprises can be reached at 800-438-8155 (voice) or http://www.grove.net/ (WWW).

MICROFICHE

The Bearcat Radio Club sells the FCC master by state for $15. Bearcat Radio Club can be reached at P.O. Box 291918, Kettering OH, 45429.

PERCON

PerCon sells FCC data on CD-ROM. The Spectrum CD covers the entire US and comes with a simple database search program. Regional CDs cover subsets of the US but come with a more powerful database manager and provide more detail about each license. Also available is a Ham callsign and repeater database CD.

Spectrum costs $37, and the Ham and Repeater Database is $22. Regional CDs are $137 for the first CD, $102 each additional CD ($560 for the entire 6 CD set). Data is updated twice a year. PerCon can be reached at 716-386-6015 (voice), 716-386-6013 (fax), support@perconcorp.com (email), or http://www.perconcorp.com (WWW). The Spectrum database can be searched free of charge via Percon's WWW page.

POLICE CALL

This is probably the most cost-effective source of public service license information. The detail is limited, but the information that is there is often more useful than the FCC master. For example, an entry in Police Call that reads, "Portland Police, Net 3, North Precinct," reads, "Portland, City of" in the master. Police Call has been recently renamed Beyond Police Call and now includes a limited selection of business listings.

Police call is available in 9 volumes covering different regions of the US. It can be purchased at Radio Shack stores for $13 per volume.

RADIOMAP SERVICE

Developed by long-time Usenet contributor Bob Parnass, this service provides a custom report of frequencies, callsigns, and licensee names for a specified area in any of the 50 states. Coverage areas of 4 to 256 square miles will be chosen by Bob depending on transmitter site density. Standard and deluxe reports are available. Both reports include a color plot with transmitter sites marked. The deluxe report adds a custom frequency allocation histogram, a 0 - 1,000 MHz "spectrum analyzer-like" display showing spectrum usage by the transmitters in the map coverage area.

To create the report, Bob requires the latitude and longitude (or nearest street intersection) of the center location. Standard reports are $29.95, and deluxe reports are $34.95. Write to Bob Parnass at 2350 Douglas Rd, Oswego, IL, 60543, or call him at 630-554-3839 between 6-10 PM central time.

SCANWARE ASSOCIATES

ScanWare Associates has developed a PC-based database program called the FCC Frequency Retrieval System. FCC data for all states is available, covering all services and all frequencies. Current data is for first quarter, 1996.

Scanware has chosen to discontinue developing this software, but the good news is that the software and data are now FREE! It is being hosted by the West Virginia Educational Network. See:
http://www.wvsc.wvnet.edu/~fcc/index.html

*. Aren't Radio Scanner Activists Fighting this Fight?
*. Won't Uniden's New 'TrunkTracker' Solve the Problem?
*. Isn't Closed Broadcasting Justified to Save Even One Case?
*. What is Meant By 'Dependence on Organized Media'?
*. What are the Solutions Open Broadcasting Proposes?
*. Resources

* WHAT IS 'OPEN BROADCASTING' ALL ABOUT?

Police and other public safety departments generally use radios that are interceptable by common radio scanners. The radio scanners are inexpensive retail appliances that can be purchased at places like Radio Shack. For very little money, ordinary people can buy a scanner radio and tune in to local public safety transmissions. The information contained in these transmissions can be useful in keeping people informed of criminal activity in their neighborhood, avoiding crisis spots, and in rare instances this information can empower citizens to participate in the crimefighting or rescue process through reporting and awareness. Many people who enjoy listening to raw public safety transmissions will also tell you that they enjoy being able to hear news first-hand as it happens, without the political clutter or filtering of organized media.

The concern here is that the new radio technology that public safety departments are switching to are not easily absorbed using the same

inexpensive radio scanners. Many old-school public safety officials are not ashamed to tell you that they are happy that citizens can no longer overhear their transmissions so easily. Citing exaggerated security concerns, many public safety officials will turn to 'closed' radio systems, successfully evading public scrutiny of their work, isolating the public from meaningful awareness of local criminal activity, and finally, imposing mandatory dependence on organized media outlets.

* DON'T CROOKS TAKE ADVANTAGE OF OPEN BROADCASTING USING RADIO SCANNERS?

Radio scanning has always been a popular hobby. Generally speaking it has been closely affiliated with ham radio, shortwave DXing (the hobby of intercepting long-range radio broadcasts), volunteer firefighting, etc. Not since the 1970s, when Uniden Bearcat ran several television spots attempting to sell scanner radios on the informational angle, has much been done to promote the use of radio scanners to the mainstream public. Hence, the 'hobby' product remained a niche interest and was easily overtaken in concept by negative media attention, particularly through the Cocaine 80s, when drug dealers found them handy to keep one step ahead of the police who unwisely used generic frequencies to discuss just about anything. The contracted interest, except by die-hard hobbyists, criminals, and the media who reported on them, left many people believing that radio scanners were abstract tools of evil.

Furthermore, the communications boom of the later 80s involving cellular telephones merged the concept of privacy and the open airwaves, and further called into question the one tool that exploited this marriage: radio scanners. Because it was cheaper to negatize radio scanners than to modify or improve electronic communication security, the cellular phone companies played a large role in negatizing the radio scanner image, and even successfully lobbied to outlaw the manufacture of scanners in ways so that they could not receive certain frequencies (this would be the same thing as making cars that automatically shut off at 65 in order to enforce the speed limits). No one but geeks had radio scanners, yet everyone who counted had cell phones. Therefore when the closed radio systems now being implemented by public safety officials began to appear, it was all too easy to convince everyone that CLOSED broadcasting was a good thing because no one really used radio scanners, and the perception of those who did was negative.

Public safety officials did not discuss the fact that they would be subject to less public scrutiny, nor did they discuss the increased isolationism they would promote between themselves and the community at large. Nor did they discuss the politics they could play with the media in regards to access to their transmissions. Most law enforcement officers, for example, hate the fact that a video camera was trained on the group of officers as they beat a black man in Los

Angeles, and many officers probably feel the same way about radio scanners as they do about that video camera.

* AREN'T RADIO SCANNERISTS ALREADY FIGHTING THIS FIGHT?

To some degree, yes. Avid radio scannerists advocate the freedom to absorb whatever radio waves are passing through their house and bodies, and oppose any restriction on the attempt to gather these waves and electronically decode them. They also fight to keep the tools of interception free from regulations. The problem, in fact, has been that the scanner purist has been somewhat successful in his plight, which is one reason why many agencies have sought tougher technological solutions. Oddly enough, scannerists often justify their position by pointing out that it is the failure of radio manufacturers to spend sufficient research funds to thwart them (see the issue of cell phone companies versus scannerists later in the FAQ), and that laws should burden the manufacturers...not the scannerist. Well, radio manufacturers HAVE researched and spent their way to a solution.

As a result, the focus on radio scanners is too tight and does not address the larger issue. That issue has to do with the fact that it is becoming increasingly cheaper and easier to use trunked or digital radio systems. If the battle for open broadcasting were restricted to the battle to keep radio scanners, in 20 years those fighting for scanners would have them--but have nothing left to listen to. The movement to pursuade public safety agencies to keep some parts of their radio communications public is an attempt to solve the more basic problem of genuine information distribution and absorbtion, and the recognition that this absorbtion is good for the overall public spirit...if only to prevent the perpetuation of the image that police are 'secret' state agents. The reason that the issue of open broadcasting is still pertinent to radio scannerists at all is simply because radio scannerists were among the first people to realize and utilize this benefit. Most radio scannerists will tell you that there is a powerful sense of positive bonding to local police when they can turn on a switch and become one with the action. Hence, radio scannerists remain a large part of this movement to some degree, even though some may resent the compromising solutions open broadcasting represents.

* WON'T UNIDEN'S 'TRUNKTRACKER' SOLVE THE PROBLEM?

If you've read the segment on why police scannerists are not the ultimate salvation to the closed broadcasting problem, then you understand why Uniden's TrunkTracker is only a temporary albeit significant solution. The TrunkTracker still relies on chasing and submitting to broadcasts rather than the other way around. If public safety still resents being monitored, it is only a matter of time before they thwart the TT.

In fact, as of this writing, the TrunkTracker cannot decipher digital broadcasts, nor can it follow the transmissions of the more complex GE Ericsson system. It is not unforeseeable that GE Ericsson could turn this into a selling point to propagate more of its scanner-hostile systems, while both Motorola and Ericsson could wind up upselling to digital systems.

In the long run, the only solution will only ever really come from the administration offices of public safety officials who must value and implement some form of open broadcasting compensation.

* ISN'T CLOSED BROADCASTING JUSTIFIED TO SAVE EVEN ONE CASE?

It is the weight of one handful of crooks with radio scanners that public safety officials base the merits of closed broadcasting after 60 years of completely open broadcasting--the early part of which was done freely at the high end of the common AM radio band.

Open broadcasting was tolerated to such an extent at that time because police work which was conducted at the turn of the century centered around peacekeeping and the maintenance of public order. Expecting police to bust stiff crime rings and become involved in covert security operations is a relatively NEW aspect of police work. At about the time radios became available to the street officer in a patrol car, it was still common to depend on private investigation firms and other forms of hired security to deal with the more organized criminal. Gradually, through the civil disturbances of the 60s, and the romanticizing of public crimefighting organizations such as the FBI, local police became more and more involved in the 'covert' approach to dealing with criminals. Not just because they were eager to dump their image as drunk-tank supervisors, and to play like the big guys, but simply because crimes and the impact of crimes became more complex and demanded a more unified state approach if not more state responsibility.

Nonetheless, street officers, even though today they are completely integrated with the fight against higher forms of criminal organization, are still mainly concerned with opportunists, crimes of passion, and crimes against peace and order. In other words, crimes in which covert communication is completely unjustified in light of their relatively DISorganized clientele. Police officers riding in patrol cars are concerned with the quality of the community fabric, not the Miami Vice imagery of the underworld. It is a mistake to give up the benefits of open broadcasting under the blanket assumption that booking a drunk is a highly classified security operation.

Fortunately, the SAME closed radio systems which public safety officials are turning to are sophisticated enough to allow *selective encryption*. That is, the higher echelon of local law enforcement may do what it does with all the security that it desires, while at the same time allowing the basic patrol operations of street-level policing to be broadcast openly for the public good. The open broadcasting argument has no problem in selective encryption, even of

entire public safety channels. It would be a sufficient gain simply to PATROLCAST. That is, to open up only the broadcast frequencies of police officers who move from one spontaneous call for service by the citizenry to another.

In any event, there is more evidence that public safety enjoys tuning the public out for the sake of tuning the public out, than they appreciate preserving the integrity of its caseloads, period. After all, there are some agencies that go so far as to mysteriously encrypt FIRE and MEDICAL transmissions as well, a certainly pointless effort and expense for the sake of any conceivable security operation whatsoever. This demonstrates that erecting a closed system is more about simply putting it together first, and justifying it later...as needed.

* WHAT IS MEANT BY 'DEPENDENCE ON ORGANIZED MEDIA'?

Because public safety officials generally face stiff legal opposition if they don't, they generally provide receivable public safety radios to members of the 'organized media'. This creates an alliance between state government and corporate media which the individual finds himself at the mercy of. Remember, individual citizens will not have unconditional access to the radios, which means they must allocate the time and resources necessary to retrieve the commonly available 'public records' if they want access to the same information. Because this is difficult to do, people are more likely to give up and depend entirely on what the 6:00 O' clock news anchor tells them is "fact".

The definition of 'organized media' is arbitrary at best and is potentially influenced by the current political climate. For example, a very conservative police department may not agree to provide a police radio to a very liberal weekly magazine citing any number of conveniently concocted excuses. Without a radio, the liberal magazine cannot keep abreast of news tips as well as its conservative competitor, and may eventually be competed out of business. Even this author's website CALLING ALL CITIZENS is a valid media presence, although it would be up to local officials to decide whether or not it would be entitled to a police radio.

* WHAT ARE THE SOLUTIONS OPEN BROADCASTING PROPOSES?

There are so many technical solutions to keep broadcasts open that it would be impossible to cover each and every one here. The real solution is basically the attitude of public safety officials who can then turn around and make use of any number of technical modes.

Still, I myself and others have proposed many obvious ideas. These ideas are covered extensively at http://members.aol.com/truth4000/page1.htm under the link of PUBLIC SAFETY SOLUTIONS. Most of them involve some sort of simulcasting over another communications medium such as cable or the internet. It is worth any administrator's time to visit this site to get a grip on the

open broadcasting philosophy and its proposals. Simulcasting is virtually ideal, but it requires financial commitment from the public service agencies involved, and ongoing maintenance efforts.

Another solutionary strand involves equal access to the same receive-only radio equipment that police give members of the organized media or crimewatch groups. While this may be the effective economic filter that actually reflects negative public safety attitude towards open broadcasting, it is probably the best compromise police can make with the public today because it involves no financial commitment on the part of public safety. Citizens pay for their own radios, which the agencies then agree to program. A "public purchase policy" is a significant crack in the trend towards closed broadcasting if agencies agree that receive-only police radios can be purchased by anyone in the public. The cost of owning the radios may eventually drop, and in any event, entire civilian-run notification networks can be built up around a handful of such radios.

Generally speaking it is easy to convince local agencies to sell police radios to everyone since their willingness to sell to local media outlets demonstrates how comfortable they are with the process in the first place. What may be harder is convincing them to promote the radios, and to support guidelines that make purchasing radios easy and effective. It is not impossible for local officials to agree to sell radios to the public, yet still harbor very negative feelings about open broadcasting in general.

That's not how the law works.

Actually, the Telecom Publishing Group is at least mistaken, if not lying through their teeth. No such bill has been proposed yet.

However, the cellular-industry-owned team of Markey and Tauzin do have something up their sleeves that may spell the end of ALL forms of non-government, non-commercial radio.

SOUTHERN CALIFORNIA ScanFan is an entirely different publication
than Police Calls. Since it's not a RS pub, they won't carry it.

Try any of the indepenent radio stores, or write to:
ScanFan Publications (760) 744-2303 voice
P.O. Box 544 (760) 471-2419 fax
San Marcos, CA 92079

ScanFan covers Los Angeles, Orange, San Diego, Imperial, Riverside,
San Bernardino, San Luis Opispo, Santa Barbara, and Ventura Counties
plus Baja California Norte and Arizona/Nevada communities bordering
Southern California. It's well worth the $19 or so cover price and
you may be able to locate it at a discount.

-=[Bill Eitner]=-

ALL THE ABOVE VIEWS AND STATEMENTS ARE FROM A NEGATIVE PERSPECTIVE.
THE LAWS AND STIPULATIONS ALLUDED TO WERE WRITTEN AND DESIGNED IN A
POSITIVE ATTEMPT TO MAKE IT POSSIBLE FOR ALL OF US TO ENJOY 'LIFE, LIBERTY
AND THE PURSUIT OF HAPPINESS' TO THE GEATEST EXTENT POSSIBLE. ANY

INTELLIGENT PERSON SHOULD REALIZE THAT ABSOLUTE LIBERTY FOR EACH INDIVIDUAL WITHOUT RESPONSIBILITY OR COST IS TOTAL NONSENSE.
OUR SYSTEM OF GOVERNMENT HAS ITS FLAWS TO BE SURE, AND CERTAIN ASPECTS DO TICK ME OFF AND MAKE ME FEEL INSIGNIFICANT. BUT I STILL BELIEVE IT IS THE BEST SYSTEM EVER DESIGNED BY MAN AND I THANK GOD THAT I AM FORTUNATE ENOUGH TO HAVE BEEN BORN IN THE USA!!

WITH ALL DUE RESPECT,
THAT'S ALL I HAVE TO SAY ON THE SUBJECT,
MR FIXIT

Read The Fine Manual that should have been in the box with your Pro-51
and it will explain what Images are. The Pro-51 is a dual conversion
design and is more receptive to these Images than a triple conversion
design scanner would be.

Incidentally, it is also illegal to listen to cellular conversations
and as a good citizen you have a moral obligation to turn yourself in
at the nearest police station.

Regards,

Tauzin & Markey, Inc. should be targeted to be put out
of business by being given pink slips by the voters.

If we are going to get rid of anti-radio reciver laws,
there needs to be an organization that can get funded
and lobby Congress to repeal parts of the TDDRA of 1994,
parts of the EPCA of 1985 and return back to where
the Radio Spectrum is once again considered public
domain with the rules of :

1. If you want privacy, use encryption
2. Except for Broadcast, anything heard
can be legally listened to but cannot
be divulged.

If those of you think that is impossible, look
at the National Motorist Association (NMA). When they
started, they wanted to do one thing, repeal the
55 mph speed limit. Critics especially the media said
that the 55 mph law will stay and people are going
to have to accept it, abide to it and like it.
The poeple of the NMA said, "no dice". Today, there
are speed limits as high as 75 mph with Montana
having a R & P Limit.

If we start putting our money in along with our
opinions on these stupid radio laws and not only complain
about but work on getting rid of them, we can get back
that we lost.

Lloyd, go away. Take your socialist views elsewhere.
This is a discussion newsgroup for scanner/radio enthusiasts, not Clinton loving dweebs like yourself.

Most people here use scanners because we enjoy the hobby of radio communication. You know, a hobby, something you seem to be in DESPERATE need of, since your goal is to post your socialist crap to rec.radio.scanner .

People on rec.radio.scanner (for the most part) are not crooks, stalkers, wanna-be cops, etc. They are law-abiding citizens who do nothing more than listen to unscrambled NBFM communications above 30MHz. They do this in their own home, car or wherever they are allowed to (on private property). They harm no one, interfere with nothing, and infringe on no one else's rights.

So, go kiss your pinup poster of Clinton and her husband, Al Gore, and of course, your idol, Sara "Sickle and Hammer" Brady. And please, let the door hit you in the *ss on the way out (you'd most likely enjoy that anyway).

Have a great day,
whining liberal!

Erik Bagby

Hey Klue. The pitch pipe prozac king more than likely posted this poor forge. He is so stupid that he doesn't know that he posted two different peoples addresses as AKA's. Jeeze, he can't even troll and stir trouble without turning it into an abortion. He also cross posted it to a radio group and a auto group so there will be about 25 people fighting over the A-HOLE AWARD. If he meant me, no you don't get to share it!!!

Glenn not Glen Quarnstrom, sheesh moron, get it straight!!!

Maybe Lloyd will not ... but I will..
The USSR was a communist state ... not a socialist state.
There are only a very, very, very few socialist states in the
world..would you belive Sweden? How 'bout a Kibbutz in Israel?

The difference is between community owned (a socialism) and state owned
(a communism).

>> >: >Sec. 508. Any person who shall equip a vehicle with a radio
receiving
>> >: set

Right. This would apply to portable scanners since bringing a handheld into the vehicle meets the definition of "equipping" the vehicle with a radio receiving set.

Now, if the statute said "INSTALL" instead of "EQUIP", it would NOT apply to handhelds. The Florida law is written this way..."no one shall INSTALL a radio device..." It has been held that this does not apply to portables since their use does not constitute a permanent installation in the vehicle.

>Huh? Let's say his freq is 46.61.
>300/46.61= 6.436387041407
>So, he needs a vertical element 6.4 meters long for that freq?
>That CAN'T be right?

The old standby, half-wave dipole formula is

468
Length in feet = ----------
Freq (MHz)

so for 46.61 MHz:

468
--------- = 10.04 feet for a HALF WAVE antenna
46.64

so a quarter wave vertical would be 5.02 feet, or about 5' 1/2" or so.

There are other considerations such as the velocity factor of the
antenna material, etc., but this formula will get you in the
"ballpark."

>monitors and such. Four, the damn thing was overpriced to begin with.
>
>The Scantenna for $40 is a better buy for scanning. Discjones? I spit on
>your discjones! My grandmother uses discjones!
>

Let's talk! If you are going to SCAN the RF spectrum from 25 Mhz to 1200 Mhz and only have one antenna jack,
the discone is by far the best antenna you can get. I do not know of any other design that is as broadbanded!
You are right in that it has no gain, the antennas with gain are uasally directional and/or of a size that does not make them
practical. I think it is by far the best choice for a scanning antenna. Transmitting is not an issue unless coil
diameter and element thickness matter. I mean resonance is resonance whether I am sending or receiving.

If I could afford the my ideal station, it would contain the PRO2035 with an opto board connected to the new RS discone
and have next to it an ICOM R7000/R7100 with a CI-V interface connected to an array of directional antennas
(rotor driven and computer controlled:Yaesu 5400B). The software would be written in such a way that when a faint signal was received by the
PRO2035 the rotor would rotate, to peak the signal strength on the ICOM R7000. Note that the heart of my antenna system is the
discone antenna. It truly is an overlooked design that is well worth the 39$.

Ok don't buy one, I imagine its going to be hard enough for me to find another one.
Now I will get off my soapbox and back to some work

> etc. Not the standard LA city/county EMS/Fire dispatch freqs. Thanks so much,

Try the medcom channels. They are in .025 increments between 463.000 and 463.175
Med #1 or medcom channel 1 is 463.000. The next channel would be 463.025
Med 5 would be 463.100
These work for standard medical and is the only thing like it in the
radio spectrum. Other than that I don't think they would be using 800 Mhz
truncking! If so, then you're up a creek! Good luck!

>broke the law.
>
How did the police know it was cellular and not cordless phones? Aren't the police who listened to the tape just as guilty of a crime as the acused. Maybe they have changed the law,
but in the sate of Mi cordless phones are legal to listen to and cell phones are not! I do not
know how someone can be breaking the law and not have any way of knowing it. For Ekim to know that he was breaking the law he would have to have knowledge of what cellular sounds like when listening on a scanner and so would the police. Moreover, the police would have to prove that he was intentially listening to cellular conversations. If he had a radio that was
unmodified and approved by the FCC that was mfg after 1992 then the police do not have a solid case against him. Now if Ekim does not speak english then he may not know that he is listening to is cellular.

The act of listening requires intent to use what information you have gained for some purpose.
The reporter and broadcast station commited a crime when the aired Newt's conversation and should have had their
FCC license revoked. A private conversation is just that private. This sceanario is no different than if they wire
tapped his congressional phone, then aired the conversations.

Nobody answered so I opened the case and noted all the ICs inside. Then I did a DejaNews search and got a hit with "MC-3361BD". You guessed it, a post by Bill Cheek.

It turns out that the Uniden Bearcat / Sportcat SC150 uses the same IC as the Pro51 and the Pro23. Therefore, the descriminator is on Pin 9 of IC MC-3361BD, in plain view when you take off the back of the case.

I tapped pin 9 with the (+) side of a 2.2uf capacitor and it works just fine with PD203.

>THANK YOU
>DOUG

Have a look at SEARCHLIGHT FOR WINDOWS, information is available from
our web site including a download demo http://www.demon.co.uk/aor
The software supports both the AR3000 and AR3000A

Pinout for the AR3000:

Radio Computer 25 way Computer 9 way
1 1 5
2 2 3
3 3 2
4 4 7
5 5 8
7 7 5 GND

If using a 25 way, short pins 1 & 7 on the computer end of the lead to
ensure that the AR3000 goes correctly into RS232 remote mode.

From: Podunk@earthling.net
Message-ID: <Podunk-2708561309520001@sense-sea-pm9-13.oz.net>
Source record: 189994

I bought a pro-51 from radio shack two days ago, and after playing around with it for a little while i realized it was picking up cell phone conversations. I thought a law was passed making it illegal to sell scanners with cell phone recieving capabilities?

If someone could tell me if there is a law like that, or knows a reason why I got a scanner that recieves them if there is such a law, I would appreciate it.

I'd appreciate knowing if anyone using trunker.exe has figured out:

1) what the OSW 0x320 is
2) the mapping between 'channel #' > 0x300 and the assigned frequencies?
whomever put out the OSW/ISW post on this medium just said 'channel
assignment - 821 mhz', but these are showing up in some major systems, and
not in the 821 mhz range....

Thanks!

I don't know guys, mabey he is right? I heard that Aliens from
selected points in the universe were abducting scanners late at night
and using their advaced technology to modify them so they would recive
from .001Khz to 999Ghz! I have one like this and can hear their radio
stations! Great Music!

P.S. For the "humor-challenged" tht was a joke, I'm not insane.

Cathy De Viney <cdeviney@intellinet.com> wrote:
>I am new and am trying to learn....
>What are "intermod problems"?

"Intermod" is short for intermodulation distortion.

It means that radio signals may interact with each other (for instance, the signal you're TRYING to hear, and a strong local paging transmitter) and/or the internal circuitry of the receiver (oscillators, etc) to create noise, phantom signals, distortion, or loss of sensitivity that affects your ability to hear what you want to.

ALL receivers suffer from intermod under some conditions and on some frequency ranges. The trick is to minimize it.

I'm just getting into scanning and I bought a Radio Shack Pro-66 handheld the other day and was a little surprised at the frequencies it blocked out. Not only the high 800 MHz, which I expected, but also the low 120's, which is what Logan Tower uses.

Is there anything I can do to this particular model to improve the situation, or did I just make a bad first choice?

Thanks!

-chj

3251. Probe Search Files

Does anyone have a set of search files for Probe with all the standard allocations ? I listened to all that e-mailed me back from the newsgroup and purchased Probe, took exactly 1 week from mailing the check from FL for me to get the package back, I was impressed.

So far I have only had the opportunity to Import 1 PerCon file but I am still learning, looks great. The only thing that I wish it had were set search banks (and modifyable)like Radio Manager has. RM has a window were you can pick and chose things like Military Air, VHF Police, Business band UHF, Business Band 1 VHF, Business Band 2 VHF, EMS, Goverment etc. etc. This made things very simple for the whole week that I had used it while searching.

Thanks!

3257. Problems Running 2KW Linears in CB Mobile

Newsgroup: rec.radio.scanner
Date: 1997-08-02 00:00:00 UTC
From: Big Bertha <BIGPOWER1@AOL.COM>
Message-ID: <33E3012E.69F6@AOL.COM>
Source record: 189612

Problems Running Mobile 2 KW Linears:

As a 2 KiloWatt Mobile Operator, myself, for over 20 years now...

Last week, while driving home from work, talking to the usual bunch of whacky Australians that hang out on 27.550 USB, Kachi in Siberia on 26.555 LSB, and a Tahiti station on 27.500 FM, the linear heat sink melted two plastic drinking water bottles in a plastic grocery bag that were resting against it, and completely soaked the trunk and back seat with water.

The biggest problem I've had with running "full power" on CB is when a tree or overpass knocks off the add-on corona ball on the end of my 1/4 wave whip. Then, the pink and purple corona that forms on the tip starts buzzing when I talk on SSB, and that causes the reflected power to go up from change in electrical resonance.

The other problem is when people pull up next to me with their car stereos turned up too loud. The RFI they get usually causes audio feedback from their speakers in my microphone when I key up on AM, but just makes a loud roar in their speakers when I'm on SSB.

The '70s mobile rig:
My original mobile station assembled in the '70s was a little Pace transceiver with a VFO, and a blue face "Sonar" single tube 100W linear driving a Yaesu FL2000B linear to about 950watts input on AM and 2.4kW on SSB. The power supply for this was a real pain in the butt to keep going (separate AC alternator and fan belt added to the engine). The old Sonar ran off 12VDC but had a loud inverter inside it, giving my signal that old characteristic high pitched whine in the background, similar to the old "Black Cat" sound.

The '90s mobile rig:
My homebrew (built in 1991) Big Bertha linear is all solid state, has 20 huge stud transistors with toroid power combiners on a giant heat sink in the trunk, and just has a habit of draining the battery pretty fast when the engine is off. (I run a deep cycle 240 AH alternate battery in the trunk). I only can get about 30 minutes of actual AM key down or an hour of SSB talktime on the linear battery per day (even when the engine is running).

My Icom IC-706 easily drives the linear to about 2500 watts input, 1750 watts output average PEP SSB and 1500W AM or FM into a 102 inch long stainless steel 1/4 wave whip antenna. The 706 is by far the best CB rig I've ever used for a mobile exciter. The speech compression and TX audio quality in it really packs a wallop!

Pile-ups on the Trucker Channels:
It's really difficult to use "full power" on channel 19 AM (or channel
17 AM in California) these days... it attracts ignorant operators.
DXers, some SSBers, and especially FMers tend to be slightly more
civilized and worth having a QSO with.

The worst parts about running "full power" on AM are:
1. Operators within a 45 mile radius on ground wave
with tiny little rigs, pile up and all try to
talk to me at once.
2. They all think I can hear them as good as they
can hear me.
3. It's hard to be really courteous and talkative
with someone when they are on the edge of the noise,
but I try.
4. Stations think I'm talking to them when I'm not.
5. Stations think I'm next door to them when I'm not.
6. Operators in various parts of the country claim
I've keyed up over them when I've never even
heard them on the air before.
7. Bleeding over onto church PA systems on sunday,
right after the preacher leads a prayer...
("I hear you loud and clear!")

People these days have no respect for the courteous operators who have
chosen to run "full power" in the mobile.

Sincerely,
Kim
"2001 a Spaced Oddity"

The nearest trunking system is in Atlantic City. I live in Paramus.
I programmed in the Atlantic City trunking system into my scanner, with no result. I can't find much on normal frequencies either. My preprogrammed Service button yeilds hardly any frequencies. The only one I could find that was consistently there is a NOAA weather frequency. In you opinion, would a better anntenna be a good investment?

Its too late. The "Knight Stalker" virus has arrived. It allowes any
digital device to turn itself back on when you leave the room. Unpluging
you computer won't work. The virus saves up electricity in any unused
file space on your hard drive or in RAM and uses that to turn itself
back on. Then while you are asleep it dials 976 numbers to run up your
phone bill. My cordless screwdriver is infected. It strips out all the
threads on the screws now.

Okay, he asked for an answer by e-mail, but if you're going to post a
message to the newsgroup telling him to check for the answer in his
mailbox, why don't you post the answer as well in case anyone else out
here is interested?

Today is Wednesday, 5/18, I'm leaving Friday for DisneyWorld and
can't
find the freqs!
Here is a list I got while online......

OK, for all of you guys that can't put your radio down when you go on
vacation - The (un)official list of Walt Disney World Frequencies.
(I'll give you a hint... I work at the Magic Kingdom, so this is
about
as official as it gets.) All of these frequencies are confirmed; They
were obtained from WDW Radio/Audio Central a:nd traffic has been
heard on
each frequency.

Anything with a * indicates simplex and probably very low power. (The
radios we use at 20,000 leagues are only 1 watt for operators and 4
watts for leads) If you don't hear anything, don't yell at me about
it,
you just aren't patient enough!

Also, Disney is steadily moving a lot of stuff to a 12 channel
trunked system
in the 800's. Currently, Security, Resorts, and Watercraft (plus some
V.I.P's)
use the system. I've seen the charts, and most of the traffic will
move there
within the next few years. Also, Disney should be setting up a 900's
trunked
system also. So, many of t non-theme park frequencies may be moving
there. .

If you would like to know who to listen for on each channel, give me
a note
at:

Internet: cwagar@ducvax.auburn.edu
America Online: "YenSid1"
Fidonet: 3613/13.20 (I think...)

Also, if you have any good frequencies to trade (especially State of
Florida
or
Alabama) drop me a line. I spent a good part of my summer sitting in
Walt
Disney World searching for frequencies... I'd like to think that
someone
appreciates it......!

Well, that's all I have (and that's alot!). Happy Scanning....!

The $300 price _with_ a Condor isn't bad.

As for Outlans, $269 isn't bad either, but don't you think you'd sell
more if you told us who you REALLY are, rather than a screen name. <G>

3270. Re: Which scanner is best in the $200-500 range?? Suggestions???

Newsgroup: rec.radio.scanner
Date: 1997-08-02 00:00:00 UTC
From: ralph smith <res@postoffice.worldnet.att.net>
Message-ID: <33E3C933.8CD@postoffice.worldnet.att.net>
Source record: 189625

I agrre with this assesment. I have a BC100XLT and a BC3000. The 100 outperforms the 3000 in every frequency range that they both cover and including the audio quality.Only saving grace for the 3000 is the fact that it covers the military aircraft frequiency range, which is why I bought it.

Absolutely mint (except cell and speed mod). $310 (US)/$430 (CDN) includes insured shipping. Box, manual, etc. Reason - more into ham radio now than scanning. Located in Waterloo, ON.

...Paramus and Atlantic City are 100 miles apart!!!!.....I suggest you invest in some time on the internet and look for some sites that handle scanner frequencies. Find them the same way everyone else does and use a search engine loike Yahoo, Lycos, AltaVista etc. Plug in words like Public Service frequencies, Police frequencies etc....and when you dig out the info you need, program the scanner and enjoy the comms......good luck......

Message-ID: <5s08e2hsa1@newsxfs02-int.news.prodigy.com>
Source record: 189629

Hello,

I cleaned out the closet and found an old scanner I had long forgot about. But I have not yet located the manual.

I lost my manual on Bearcat BC101 scanner radio. Can anyone help me get another copy? I also seem to remember a formula page that could be used to determine the switch setting for any frequency not listed in the scanner manual. If you have this manual I would be very grateful if you would post the formula on a letter to me here on this usenet.

I would be happy to pay the costs to reproduce the manual, if you have one.

Thanks,

Dave deh@tadpole.com

3275. Cruise Frequencies?

Newsgroup: rec.radio.scanner
Date: 1997-08-02 00:00:00 UTC

Re: scanning at Disney.

Be advised that "The Mouse" seems to frown on people walking around their parks with strange-looking radios. Often, you will be approached by one of their security folks and asked politely to allow them to keep your scanner until you leave the park. If you refuse, you will likely be asked to leave the park.

Be discrete. Hide the scanner in your wife/girlfriend's purse when entering the park and use headphones when monitoring. And of course, don't make a nuisance of yourself or be "obvious" about your activities in any way.

At the track, Racing Electronics will sell you for $5 a sheet with the
latest freqs (some drivers change freqs almost every race...why???). The
list also includes the NASCAR freqs (listen to the tower!) and the media
broadcast freqs. WELL spent $5, IMO.

3282. BC2500XLT Keypad combinations?

Newsgroup: rec.radio.scanner
Date: 1997-08-02 00:00:00 UTC
From: rdy <rdy@gte.net>
Message-ID: <5s0ffcdgd1@gte1.gte.net>
Source record: 189637

Hello!

I just bought a used BC2500XLT, in perfect condition. (Don't know about the battery yet, but it seems like it was mainly used with the A/C) Since it was only $160.00, including case, and A/C, it was too good to pass up. However, there was no manual! I thought, "No problem, I've got the Internet, and Scanner Newsgroups!" Unfortunately, I haven't been able to find that much about the 2500XLT. I'm most interested in keypad commands. I tried some like those for the BC3000XLT, and some worked, and some did not. Can anyone tell me about them, or to make it easier, point to a place on the web? I know it's not the greatest scanner in the world, but it sure beats going to R/S and spending $300-400 for a similar model, and I don't know of a good source (locally) to buy higher-end Bearcat scanners. (I live in DF/W) Also, can someone confirm a message I saw about if the serial number is greater than 4500, and/or if the date ends with 'D', that a Cell mod is not possible? It doesn't matter that much, since it's still an incredible scanner, at least for me.

Last, any info on Ham/Scanner/Amateur conventions, in the Texas? I'd love to go to one. Any help would be greatly appreciated!!

I can't contribute much yet, except that I've already stumbled across plenty of Cellular conversations (mirrors, I believe) in the 820-830 range, with pretty good quality. But, as when they did turn up, I immediately stopped the search, because listening to Cell phone calls is illegal....and I don't want to go to jail... ;) Also, the quality of incoming broadcast (T.V, radio, etc.) is amazing. Much better than an old R/S Pro-51 I used to have. Last, if anyone can tell me what the C. F. and L. options are on the right-knob, I'd really appreciate it, and whether or not I can pick up AM radio with it?? I'll post information I get later this weekend, that hasn't been posted about the 2500XLT yet. The Newsgroup rules, by the way..

Thanks! Next time, there will be more answers than questions...

RY

p.s. It's very refreshing to see a newsgroup, that obviously deals very quickly with spammers. I was very quick to subscribe...

p.p.s. Any ideas on what U.S. Customs would say about me bringing a scanner back from Europe? (I don't like steel bars...)

You may be expecting too much, but I doubt it. Keep in mind that stations are not on the air all the time, just short bursts of as little as 2 or 3 seconds. ALSO: were are you located. Try the non 900 cordless phone freq, local or county fire freq and police. You will soon have more things to listen to than you have time for.

Replace it.
Call Tandy National Parts 1-800-442-2425 and order part number
GE-88D-7738. They're $31.51.

Socialism is the economic system used by communist countries.
Communism is the political system used by dictators.

Socialism in an economic system where the state controls the
supply and distribution of goods and services.

Communism is a political system where the governments power has
grown to the point where now it controls the economy, and you too!

There is nothing in my 1982 owners manual about that. The only thing
that comes close is that if the batteries are removed for a while, test
freq's will be loaded into the memories when powered on.

The Kool Stuff is listening to an "event" on your scanner and watching
it on TV, i.e., like the stupid guys trying to out run the police in the
LA/Orange County area in a old beatup pickup truck!
Love it!

I'm with Bruce (earlier in this thread)--sounds like a bandwidth/connect
speed problem to me. Best connect I've been able to get has been 28.8,
so you might try slowing down the modem a bit(?). I can't imagine the
platform would make much difference, and you've got a kick-ass
processor, but FWIW I'm running a Power-PC 180MHz 603e using Netscape
Navigator 3.01. Could be the Navigator version?

Haven't you listened to them?? The "base" broadcasts both sides so the
handset can hear, the handset transmits only what the person using the
HS sez and is a weaker signal.
Don :-)

> scanner back from Europe? (I don't like steel bars...)
The 2500 is basically 25-1300mhz. The C means that when you turn the knob above it you rotate thru Channels, F does the same only for freq, L is for Lock.
There are only a few "keyboard tricks" worth knowing:
You can only have priority "channels" in the first 10 banks (1 per bank). To set priority on a channel, press and hold [PRI] for 2.5 secs.
To reset "count" to zero press [.] twice.
To reset to auto "steps" during search press [.] twice.
Auto store: [manual], xxx.xxx [limit] xxx.xxx [limit] [auto] select a bank to store freqs, [src].
To move a freq from one bank to another: [manual] select channel to move from, [snd] press keys for bank # to send freq to, [E].
Everything else is intuitive.

Your best starting point is to go to Radio Shack and pick up a copy of
Police Call Plus for your state. And/or visit an amateur radio store,
where they sell other frequency books.

3306. New BC235XLT (Is this all?)

Newsgroup: rec.radio.scanner
Date: 1997-08-02 00:00:00 UTC
From: loser0@SPAMhotmail.com
Message-ID: <33e490ff.8181222@netnews.worldnet.att.net>
Source record: 189731
Cross-posted to: alt.radio.scanner,rec.radio.scanner

I just got a new Bearcat 235XLT scanner. It's my first scanner. I spent about five hours playing with it. I'm beginning to learn how to operate it (i.e:scan,search, use trunking,etc...). It's a very nice, beautiful scanner. My problem however, is that I found almost nothing to listen to. After searching tons of frequencies for many hours I found maybe a dozen channels that had anything on them. Only 3 or 4 continue to recieve audio. I tried inputting various frequencies that I got off the net. Most of them didn't work. I put in a trunking system that I got from the booklet that came with the scanner. Nothing. Dead air. I feel very disappointed. I had the (maybe misguided) idea that there would be tons of stuff to listen to. Maybe it is my anntenna? I heard someone say that the Bearcat 235XLT has a lousy anntenna. The anntenna is bendable rubber and about 5" long. Can anyone tell me, if this type of result is typical? Is it likely that if I invest in a more powerful anntenna I will be able to hear significantly more? Otherwise I feel like my 270 dollars might be better spent elsewhere. Thanks for your help in advance

If you are in a metro area, you should have a ton to listen to. If you are in a small town, what you describe is probably true. You could also be dealing with a programming problem. Since it is your first scanner, you might not be entering your information correctly. If you want, I can try to help you. Email me.

How far away are you from a department that uses a trunking system? The
rubber duck antennas that come with most scanners don't have much gain
at all, if any. If you are 20-30 miles away from the department that
uses the trunking system, you won't hear it without getting a better
antenna. I use an extended telescoping back of set scanning antenna
available at Radio Shack and I get about 30-40 mile range, depending on
the frequency.

Hope this helps. If you live in an area that does use a Motorola
Trunking system, the BC 235 XLT is well worth the money. Even if you
use it as a regular scanner, it's still worth the money.

Try the Interceptor first.
I have the Xplorer and dont think much of it. found the r10 about the
same. exept for the hold it will pickup intermod and just dont work as
good as the scout with the radio interface.
you want a good set up look for a good used scout and find a good 8K
from AOR.
Good luck

3322. Scrambled Cordless Phones

Newsgroup: rec.radio.scanner
Date: 1997-08-03 00:00:00 UTC
From: D <Seti1420@concentric.net>
Message-ID: <33E517D1.70E3@concentric.net>
Source record: 189497

I got an MVT7200 hand-held wideband receiver, (100khz-1650mhz, including cellular) and one day, i decided to scan 45 Mhz and up, and came across some funky stuff. Cordless Phones..! Anyways, this guy next door to me was bragging about his new cordless phone and how safe it was and all that because it was scrambled.. I decided to see how safe his cordless really was, and started scanning the old 46.610-46.970..! On 46.770, i got a really strong signal, and i hit the ATT switch on my scanner to disable the pre amp that is built-in. The signal was still very strong, and the conversation was scrambled. I knew that it was him. I changed my scanner's mode to SSB, and step to 50hz. I started going down the center frequency.. 46.769, .768, .767, and on 46.766, i startes to understand the words..!! I kept going lower, and lower..! Finally on 46.766.65 on USB, i could PERFECTLY hear both ends of the conversation. I smiled and turned my scanner off cause i didn't wanna hear any more of his stupid remarks on how much he liked his new phone and it was very advanced; boring his girlfriend to death..

So, the moral of this story is... well, you figure it out..! ;)

BTW, Radio Shack products are really primitive.. If u wanna do some real scanning, get ICoM, YuPiTeRu, or AoR..! They RuLe..!!!

3323. ICOM R-8500 + CR-293 Hi Stability Crystal ??s

Newsgroup: rec.radio.scanner
Date: 1997-08-03 00:00:00 UTC
From: mmf1@ix.netcom.com
Message-ID: <5s35gl$ppc@dfw-ixnews7.ix.netcom.com>
Source record: 189498

I have an ICOM R-8500 in which we have recently installed a
CR-293 High Stability Crystal Unit. I immediately noticed an
improvement in
the quality and sensitivity of reception in the short wave bands.

Now I have trouble receiving on the aircraft band and higher. The
higher you
go, the weaker the signal.

Has anyone else installed this crystal? What problems have you had?
Any idea what's causing my problem?

(Yes, I've read the Icom instruction manual.)
Thanks, Jim Gonsalves, Oakland, CA, US

I have a question and maybe someone can help me with this. About six months ago I purchased the PRO-26 Portable 200-Channel Scanner with Continuous 25MHz to 1.3 GHZ Coverage. I just recently went to Radio Shack and they said that this model had a re-call and they do not sell it anymore. They said they did not know the reason why this model was re-called (which I think was bullshit) Anyway...are there any mods for cell on this? Can someone be of help and I would greatly appreciate it.

Thanks and happy listening,

Clayster

3331. RF Noise from Amp?

Newsgroup: rec.radio.scanner
Date: 1997-08-03 00:00:00 UTC
From: marktech@webtv.net
Message-ID: <5s3ercslm1@newsd-112.bryant.webtv.net>
Source record: 189506

Help!
I recently upgraded from my factory stereo in my truck and installed a new head unit amp etc. I am now receiving engine whine and channel lock on my RS Pro 2026 at low freqs- 30 - 50 mhz. I have tried to reground the amp and have rerouted the antenna cable away from all rf sources but to no avail. Tried a second antenna with the same results. Head unit is no problem but as soon as the amp is energized the problem occurs. Higher engine rpm seems to lessen the effect but even with full squelch it will still occur. It definitely acts like it is picking up stray rf from the amp through the antenna. Any possible solutions would be greatly appreciated.

Hi there, Do you want to test how quickly you can blow nearly 30 bucks? Just go to Oshkosh, WI and follow the "EAA" signs. It is going to cost you $5 to park your car and $21 to get in(if you are not EAA member). If I remember right year or two ago I was paying around 15-16 bucks to get in. Economists say that we only have 3-4% of inflation. Are these aviation suckers trying to promote General Aviation to the General Public or to the millioners' club? I do not know about you, but as for me, I better go flying for half an hour when July 1998 rolls around rather than head North to the rip-off town. Regards,

Andy

I don't know offhand what RS gets for a rubber duck scanner antenna, but
they sell a great little telescoping scanner antenna w/BNC for about $10.
Works better than my rubber antenna.

I have a "Compound" for sale. It is a 20 acre lot with bomb shelters, 2 yr supply of food, etc.
It is in a lovely wooded area with a babbling brook, and running water.

I am dying of cancer and will not probably live to see the inevitable "apocolypse" when the Government outlaws scanners, and you fat guys get out of your lawn chairs at the trailer park to "Revolt".

I think it would make a great place for a last stand.
I'm asking only $775,000 plus I hope that the lawn is mowed regulary.

Please respond here, and I will contact you as soon as my cancer advances to the critical stage.
Looking forward to hearing from you.

Perfect for the Anti-Government, Our-Rights-Have-Been-Violated, those-bastards-got-it-all-wrong, We-got-the-right-to -listen-to any-thing-we-want-like-the-Nazis-did Club House!
Just keep the lawn mowed, or I'll be pissed!

From: Randy B <RandyB@DNC.Net>
Message-ID: <33E4D321.1680@DNC.Net>
Source record: 189517

Greetings group,

I have a RS Pro-2006 and was issued a HP200LX at work (I work for HP) I haven't as yet, put an OS456 board in my scanner but I'm considering it.

My questions:

1) How difficult is it to control the Pro-2006 using Probe with the 200LX? Do I use the standard HP Connectivity kit?

2) My 200LX has has 2 Megs of Onboard RAM, would I need to obtain an additional RAM card?

3) How difficult is it to load the Probe program into the 200LX?

4) How difficult would it be to transfer the database in probe back and forth between two computers and use the scanner between two computers? (Not at the same time of course)

I've heard of people doing this, I just got the 200LX recently and haven't had an opportunity to play around with it very much. I figured this would be the best forum to ask these questions, thanks for your time.

You know the best part about this unit is its size.
So small that you can and do take it everywhere.
What I'd like for it though is a case, or at the very least a belt clip.
I have enjoyed using one now for many months and find this is really the
only fault.

When all else fails, read the documentation, especially the "tuning"
section. Start off by decoding the *.wav files that came with the
program. BTW, if you are trying to decode DTMF tones, make sure the DTMF
module is loaded. THIS IS VERY IMPORTANT!

It took me a little time to get it tuned just right. (I was trying to
decode DTMF tones but the DTMF module wasn't loaded). Once I got it
tuned, it works great.

I don't know if this works on the 100XLT. Try holding MAN, 2 & 9
keys down at the same time while powering up the radio.

I read some catalog a while back about a device I could incorporate somehow with my car's AM radio and have it receive a limited region of the shortwave spectrum.

Can anyone please point me in the right direction for this type of device?

Thanks much in advance.

> I'm most interested in
>keypad commands. I tried some like those for the BC3000XLT, and some
>worked, and some did not.

I only know of a couple that work on the 2500. One wipes out the
memory of the scanner, the other places test freqs into the first 20
or so channels. a possible third that works on newer models may
display the version #. Possible fourth tests the LCD readout on newer
models.

> (I live in DF/W) Also,
>can someone confirm a message I saw about if the serial number is
>greater than 4500, and/or if the date ends with 'D', that a Cell mod is
>not possible? It doesn't matter that much, since it's still an
>incredible scanner, at least for me.

There were 2 more productions of the 2500 in the 'D' catagory. (That
would be 1994.) If it is 0CID, then it was made March or 1994. This
is before the TDDRA law that states it is illeagal to manufacture a
scanner capable of cellular monitoring.

>I can't contribute much yet, except that I've already stumbled across
>plenty of Cellular conversations (mirrors, I believe) in the 820-830
>range, with pretty good quality.

These aren't mirrors. They are the actual mobile side of the phone
conversations. Avoid approx. 823 to 850 & 868 to 894 Mhz to comply
with federal law. ;)

> But, as when they did turn up, I
>immediately stopped the search, because listening to Cell phone calls is
>illegal....and I don't want to go to jail... ;) Also, the quality of
>incoming broadcast (T.V, radio, etc.) is amazing. Much better than an

>F. and L. options are on the right-knob, I'd really appreciate it, and
>whether or not I can pick up AM radio with it??

C option is for Channels. I'm not too sure if I remember how this
works. Basically, when you flip the switch to C, then select a
channel, then turn the center knob of the option switch, you should be
able to move up or down in channels.

F option allows tuning of a frequency in manual mode. Select a
channel, place the knob in F mode, then turn the knob in the center of
the option switch. You should be able to tune up or down from the

frequency on the display.

L option is sort of an off switch. It doens't do anything.

>p.p.s. Any ideas on what U.S. Customs would say about me bringing a
>scanner back from Europe? (I don't like steel bars...)
>

If you bought it in the states, make sure you have the receipt.
This is about all I know.

Additional features...

* While in Manual mode, press the CNT key. You should see how many
times the scanner has received a signal.

<snip>

I am in Sonoma (20 Mi. SW of SRosa) and hear the CHP "Golden Gate"
dispatcher on 42.66 regularly. Never hear any references to the color
scheme. I also have heard what are call the "handie talkies" on 154.92
and 154.95. I think these are the handhelds used when officers are on
foot, not sure if they repeat through the car or are a sepaerate net.

Anyone else got any info on Bay Area CHP stuff? Thanks.

>
> The funniest one I ever heard was .... " Engine 10 , on the scene...
>nothing showing....BOOM!... HOLY S**T!!"

I heard a similar one last week... I missed the original call, so I'm
not shure what the fire was... probably an outbuilding or something:

truck: Engine 42 on scene. single story residence, nothing showing,
people sitting on porch.

dispatch: Copy, 42 on scene, nothing showing, people sitting on porch.
<laughter>

[few minutes later]

truck: cancel all but one unit responding, can handle with two.

Turned out it was a fire, and by the time the second unit got on the
scene, it was out, and not even the second unit was required.

Very funny. Still a load of rubbish though.

To be as clear as I can on this for all those of you who actually are
thinking about this...

Listening to a virus being transmitted in any way (analog or digital)
with any scanner (AOR included) will not (repeat NOT) put that virus
into the scanner. It will sound odd and you will no doubt get bored of
listening to it but it will not change the working of the scanner at all
in any way.

Listening to an entire UNIX operating system being transmitted will not
turn your scanner into an Silicon Graphics computer either, alas.

CHP HT repeater traffic (HT - Car mobile) is on 154.905 statewide with few exceptions. The car TX runs about 1/3 watt to a quarter wave antenna on roof of car and HT is 5 watts.

Message-ID: <19970803224801.SAA06775@ladder02.news.aol.com>
Source record: 189586

Well, after about six weeks of service, my TT gave up the ghost. It appears the antenna problem mentioned by several others has reared its ugly head. The symptom is simply the radio recieves like it has no antenna attached. Can't find the local data channel, traffic on scanning mode is very scratchy, etc.

Is the fix in a replacement antenna or does the radio need to go to the shop as well? In case the local dealer where I got it (HRO) does not have a replacement unit; does anyone know how fast Uniden would turn it around if I sent it in? Thanks....

I was wondering if anyone had any modifications for the RS Pro 60 handheld scanner. I have seen postings regarding the cell mod(the one about removing the lowest capacitor on the circuit board at the lower right) and something about a channel mod to increase the channels. If you have any information about these or any other mods for the pro 60 please email them to me at kingtrid@mindspring.com
Thanks

3389. Frequencies for KC Metro area

The most common public sector encryption method is probably the DES (Digital Encryption System) scheme which came into use in the early 80's or so. That is what Phil described I think. It can be used for voice or data, is available to the general public, and anyone can get the specs and stuff needed to build it in. Motorola portables (MX-300 series and later) were the first to make great use of it to my knowledge.

DES should provide a level of security that goes way, way, beyond the efforts and capabilities of the public sector. I do not have any first hand knowledge of who can break it or if, where, or how it is being done. As "sold", it should satisfy the needs of anyone who is not worried about a few major world powers eavesdropping on them.

To my knowledge DES does not have an audible preamble where some high grade military systems have an audible tone burst at the start. If my scanner stops on "white noise" and I don't have an S meter to see if a strong signal is present, I just restart the scan and then lock that channel out the next time it stops on it. You can drive yourself crazy trying to squelch them out.

3400. PRO-51 Cellular Modifaction

Newsgroup: rec.radio.scanner
Date: 1997-08-03 00:00:00 UTC
From: Eddie Kosloski <scanist@acmenet.net>
Message-ID: <01bc9fb0$ee55eb80$4ab698ce@Pscanist>
Source record: 189659
Cross-posted to: alt.radio.scanner,rec.radio.scanner

Fellow Scanner Dudes,
I have recieved so many e-mails about this cellular modification for the PRO-51
that I think its about time to post it to the news groups.

{{{{{{{{{{{{{{ PLEASE READ THIS WHOLE PAGE FIRST }}}}}}}}}}}}}}
Scanners with ser # beginning with ' 4500 ' or after date code 7A4 (July 1994)
have had a new CPU installed and this keyboard modification will not work.

******* DOING THIS WILL CLEAR ALL PROGRAMMED FREQUENCIES THAT YOU HAVE IN YOUR SCANNER, SO PLEASE MAKE A LIST BEFORE YOU
PROCEED *******

TEST MODES (these are TEST freqs that were permanately burned into the scanners CPU)

MODE 0---CLEARS ALL MEMORIES--PRESS (2) & (9) AND TURN ON
MODE 1---FILLS CHANNEL 1-25 WITH TEST FREQUENCIES--PRESS (2) & (9) AND LOCK-OUT AND TURN ON
MODE 2---FILL CHANNELS 1-17 WITH TEST FREQUENCIES--PRESS (2) & (9) AND MANUAL AND TURN ON
MODE 3-- DISPLAY TEST--PRESS (2) & (9) AND BAND AND TURN ON
You must press and hold the indicated buttons while turning on the radio.

HERE'S WHAT YOU DO:
MEMORY MODE 1 WILL FILL CHANNEL 23 WITH 888.969 MHZ WHICH IS WITHIN THE BLOCKED CELL BAND.

STEP 1--OPEN SQUELCH AND STEP TO CHANNEL 23
STEP 2--PRESS THE UP OR DOWN ARROWS TO SEARCH THRU THE BAND. BE CAREFUL NOT TO GO BELOW 868.950 OR ABOVE 896.100 OR YOU WILL HAVE TO GO BACK TO STEP ONE.
******* ON SOME SCANNERS YOU MAY NEED TO SELECT MODE 1 IMMEDIATELY AFTER STARTING MODE 3 ******
******* THIS IS THE ONLY WAY YOU CAN GET TO THE CELL BAND *****
(There are no hardwire mods. for the Pro-51)

******* TO STORE A CELLULAR FREQUENCY INTO A CHANNEL (1-200)
YOU FIRST MUST STORE IT INTO A "MONITOR CHANNEL" AND THEN
DO THIS ******

1:STEP TO THE MONITOR CHANNEL YOU WANT TO STORE (1-10)
2:PRESS (PROGRAM), THEN THE MEMORY CHANNEL NUMBER YOU WANT TO STORE.
3:PRESS (PROGRAM), THEN (MONITOR) THEN ENTER

THIS MIGHT LOOK OR SOUND A LITTLE WACKED, BUT ONCE YOU DO IT A FEW TIMES
ITS A PIECE OF CAKE!!!!
GOOD LUCK AND LET ME KNOW HOW YOU MAKE OUT.
Eddie Kosloski

The ICOM R9000 has this ability also... Around $5300.00 US
>
>To me it seems as if it has about the same features as Scan*Star's
>Spectrum Analyzer which has been around a while. What's all the hype
>about? Am I missing something? Thanks in advance.

The closest thing to Scanstar I use is a '2006 with an old Heathkit
spectrum monitor watching the second IF, I get a 'Real Time' picture
of about a 5mhz swatch of bandwidth, 15 mhz with attenuation out
beyond 6.5 mhz.

I saw Winradio's blurb on the new software, I am ordering one and
buying a new (used) computer just for it. Closest you can get to a
DC-DAYLIGHT spectrum scope fer under $1000.

Good Signals...

Here is the information regarding my possible sale of my Yaesu FT-5200

Selling to pay medical bills after bone marrow transplant:

Yaesu FT-5200 Mobile Dual-Band (2m/70cm) Radio with included
accessories:

Originally purchased radio, s/n 4K 500171, in November of 1995 for
$666.66 (AES is now selling for $599.95)

FRC-4 DTMF Pager Unit (installed): Originally paid $45.00, AES
currently
selling for $29.95.

YSK-1L Remote Separation Kit: Originally paid $65.95, AES currently
sells for $58.95.

BOTTOM LINE:

FT-5200 in mint condition, non-smoker, display still has original
plastic
protection on it, original carton, FRC-4 installed, YSK-1L installed

$480.00 takes all, I'll pay UPS in continental US.

>

This is incorrect. I hear people all the time (mostly on the Ham bands)
using the term "INTERMOD" incorrectly. I heard it so much that I
actually believed it too. That was until I studied for my General
Radiotelephone Operators Licence, and learned that what most people mean
when they talk about what their RECEIVERS are experiencing is actually
called "CROSS-MODULATION"

INTERMODULATION has to do with TRANSMITTERS, and
CROSSMODULATION has to do with RECEIVERS.

When ever you hear someone use the term INTERMOD when they talk about
their RECEIVER, and that they are "receiving" Intermod... Tell them the
CORRECT term is that they are receiving CROSS-MOD!

I don't know of a cheap way other than hoping the coax will ground it thru the scanner then thru the power cord to the wall socket. The right way is to run a heavy gauge wire from the mast to a grounding rod in the least possible distance.
Don :-)

Not trying to be a wise-guy but, ask, look it up in a freq referance book, buy a decoder, or if you have ctcss built in to your scanner, try each one until the audio for the freq comes thru. That's about it!
Good Monitoring;
Don :-)

Why is he telling "them" that thier calls can be easily monitored??
Something like stirring the pot or what? Their calls are private. You
are invading thier privacy by listening with a radio or a wiretap. When
you try to explain this to non-radio types you just make a bigger mess
than we have now. Thank you very much!
Don :-)

Low band: 10.745-51.701mhz
Freq x 200 (round off to nearest whole number)
Subtract result from 10340
Sw 1= 4096
Sw 2= 2048
Sw 3= 1024
Sw 4= 512
Sw 5= 256
Sw 6= 128
Sw 7= 64
Sw 8= 32
Sw 9= 16
Sw10= 8
Sw11= 4
Sw12= 2
Sw13= 1
Sw14= Lowband (on = UP)
Sw15= Lowband (on = UP)
Sw16= 2 second delay

Hiband 143.745-184.701mhz
Freq x 200 and round off like Lowband
Subtract from 36940
Switches same as above except
Sw14= down (off)

Sw15= Highband (up)

U & T band 409.6625-512.001mhz
Freq x 80 round off
Subtract from 40964
Sw14= U & T (up)
Sw15= off (down)

I also have a DOS (QBasic program) program that I wrote that will give
you switch settings for any freq if you are interested.
Good Monitoring,
Don :-)
P.S. I still use my BC101 also!!

Yeah you could use a TV ant with a rotator. I use a Grove Scanner beam
for the same effect feeding a Diawa CS-4 coax switch (4 BNC inputs/1 BNC
output) as well as a 8ft vertical for low band stuff, and a Diamond
(brand) discone in parallel with a 2in spike for +1000mhz "stuff".
Good Monitoring,
Don :-)

3424. *** ANNOUNCE: VisualRadio available in the UK ***

Newsgroup: rec.radio.scanner
Date: 1997-08-03 00:00:00 UTC
From: Simon Collings <simon.collings@cableinet.co.uk>
Message-ID: <01bc9fe5$ddad98c0$4c9275c2@sapphire>
Source record: 189683
Cross-posted to: alt.radio.scanner,alt.radio.scanner.uk,rec.radio.amateur.misc,rec.radio.scanner,rec.radio.shortwave

Simon Collings, Radio Communications Consultant appointed UK distributor for VisualRadio

18/07/97 -- VisualRadio is a sophisticated RS-232 control package from Liedtke GmbH with support for a variety of radios.

Featues include:

•Controls a wide range of popular radios. ICOM all models (including the R-8500), JRC NRD-525, NRD-535, KENWOOD all models, O'ELECTRONICS Scout *, RACAL 6790/GM, R & S EK895 / EK896 **, WJ HF-1000**, YAESU FT-736, FT-840, FT-900, FT-990, FT-1000, FT-1000MP, FRG-100, FRG-8800, Selected AOR models.

•Control Panel. Signal and frequency display; mode, agc, etc...
•Signal Display. Analogue S-meter display; max-hold; choice of dBm, uV, mV, S, RMS or peak. •AF Analyser. Audio frequency spectrum derived from sound card (not supplied); 2.5/5 kHz sweep width; Peak Hold/Average; frequency at mouse pointer; Zoom x1, x2 or x4; Length 256, 512, 1024 or 2048 points.
•Networking. VisualRadio can be used in a Windows-compatible network environment
•Tuning. Receiver tuning via double click on the corresponding data in a table or on the desired frequency in a graphic display. Frequencies, mode of operation etc. can be easily transferred to the Masterlist, Channel Table and Log File; Automatic identification of stations at tuned frequencies
•VR/Link. Link together two radios for dual operation using a pair of serial ports
•Database. Unlimited number of Microsoft Access compatible databases; Additional features - user defined fields, filtering using SQL queries; SQL query save; sort fields a click of the mouse; search and replace all data in table columns
•Timer. Timer-controlled scanning with automatic recording of broadcasts
•Audio Recording. Recording in Windows WAV format
•On-line User's Guide. A comprehensive on-line User Guide in Windows help file format guides you through all the features of the package. There is no printed manual..

VisualRadio is available in the UK from Simon Collings, Radio Communications Consultant. Point your web browser to the following URL for details of this and other radio related products:

http://wkweb4.cableinet.co.uk/simon.collings/products.htm

Since the Scanner store in Anahiem closed, The LA area is a wasteland
for scanners other than RS. 7 million folks live here but not enough to
support a scanner store. Probably the best way is to order one thru taht
store in Santa Clara?? or Grove or similar.
If I knew it would fly I would love to own/work in a store full of
scanners/goodies with a roof that looked like a porcupine fest!
Good Monitoring,

Don :-)

Hello again Cathy,
Intermod is when signals you don't want mix together in your scanner and you end up hearing something completely unrelated to the freq you are tuned to. Not a good thing of course. The better the scanner the less this will happen except as described in another post on this newsgroup.
Good Monitoring,

Don :-)

This kind of thing really makes me angry, being a police officer(+24 years), ham radio operator (+30 years), and scanner enthusiast. Wonder what they'd do to ME if I brought an unmarked squad car into their state? Tow it? How do I explain that to the Chief?

I know the BC-855 has a mod to increase the number of memory channels
to double the original 50. Is there any known mod for the previous
model, the BC-800 to do the same? And is there any known web sites
dealing with the Bearcat line of scanners dealing with tips, history
or other useful information? Thanks in advance for any help

3444. TRUNKER **UPDATED** V3.1 RELEASED!

Newsgroup: rec.radio.scanner
Date: 1997-08-04 00:00:00 UTC
From: rickch19@sgi.netxx
Message-ID: <5s4rnlsok1@taurus.bv.sgi.net>
Source record: 189453
Cross-posted to: alt.radio.scanner,rec.radio.scanner,phl.scanner

TRUNKER V3.1 has been RELEASED.

Updates to V3.1 from V3.0:

1) Corrects problem with TRS's which do **not** send a SYSTEM ID.
(Note: Seattle, WA has a ****different**** problem, and is under
review by the TRUNKER V3.x development team.)
2) Adds support for systems without a math co-processor. (ie. 386sx,
486SX)

*** PLEASE NOTE ***: I am **NOT** the author of this software, I was
sent a copy of the software to post anonymously. **LIMITED** support
of the TRUNKER V3.x software will be provided by going to the TRUNKER
V3.x page and following the instructions to email bugs/problmes to the

support team. In addition I suggest you post articles to SCAN-L,
TRUNKCOM,
alt.radio.scanner, & rec.radio.scanner to get support from the author,
whoever that is.

** I AM NOT THE AUTHOR ** I am providing the author a method to post
their software ONLY.

Version 3.1 is available via my web page, URL below.

You must follow the links from my web page to the TRUNKER V3.1 page.
Start at: http://www.geocities.com/CapeCanaveral/Lab/1060/

Goto the External Devices Page, then Trunking Decoders Section, then
to the TRUNKER V3.1 page.

Features of V3.1 include:

Features

* Decodes and displays the data stream
* Remembers, via TXT files, the characteristics of the trunked system,
on a per-system basis.
* When identifying a previously monitored
system, retrieves the stored data from text files saved in previous
runs.
* Allows the user to augment the group and individual IDs with
colors designations, priorities, and a text description.
* Will drivea AOR8000 in 'trunk-tracking' mode using the TxOut lead
of COM1 *Allows on-screen input of group and individual text
descriptions while
trunker is running

* Upon first encountering a new individual ID,provides an initial text annotation value
indicating the group with which it was first used.

Requirements

*Trunker 3.1 is intended to run under MSDOS. Although it has been shown to run under Windows-95, no assurances are made of compatability or fitness for use.
*Trunker 3.1 requires the data slicer to apply
its digital output to the CTS input of COM1, and COM1 is required to use the standard interrupt and I/O addresses.

Heard on area PD repeater the other day after a week of bad electrical storms that knocked out F1 (F1 = PD repeater; F5 = FD repeater):

"Radio maintenance to headquarters on F1."

"This is HQ, go ahead radio maintenance."

"HQ, F1 is back in service; you can have all police units return to F1."

"10-4, radio maintenance."

"Unit XYZ to HQ; I wasn't aware we were on F5."

"XYZ, this is HQ; we've been on F5 for five days now."

"That would explain why things have been so quiet on F1, huh?"

The $300 price _with_ a Condor isn't bad.

As for Outlans, $269 isn't bad either, but don't you think you'd sell
more if you told us who you REALLY are, rather than a screen name. <G>

Barry

Wanted to buy for parts: I need a non-working BC-800XLT scanner. The case, specifically the front panel, must be in mint to near mint condition. The rest of the unit, including the circuitry is not really important to me. If you have one, please e-mail with details and price requirements. (Or if you happen to have just the front panel as described,)
Thanks,
Ray Miller N2NJK radioman@localnet.com

Yaesu FRG9600 receiver/scanner. 60-905 MHz.
No gaps, NOT cell-blocked
MODES
FM narrow/wide
AM narrow/wide
USB/LSB

100 memory channels
Runs on 12Volts.
Built-in clock can turn itself on/off
Recorder control output.
Does NOT have the optional video detector.
Homebrew RS-232 computer interface.
Shareware computer control program.
Plug it into your computer RS-232 and it's fully programmable.
Copies of operator and service manuals.
This is a nice receiver. I have two, don't need both.

BEST OFFER or trade for Standard C510A dualband handheld.
Consider trade for a Yaesu VX-1 with cash.
I'll be much more flexible about a VX-1 trade if you have the
newer rom that fixes all the bugs.
Located in Portland, Oregon.
miker

> you want a good set up look for a good used scout and find a good 8K
>from AOR.

How does the built-in decoder (CTCSS, DCS, DTMF) in the Xplorer
perform? Is it reliable or just junk as others on the market, with
radio related issues such as noise and fading reducing performance
(read: false and missed detections) even more?
I've never really thought the Xplorer could really deliver any
performance in this world full of radio noise and pager transmitters.
I see that an owner also thinks so.

Please email me directly in addition to posting here, so no
responses are missed. Don't forget to remove the "55" from my

Eddie Kosloski wrote:

Fellow Scanner Dudes,

I have recieved so many e-mails about this cellular modification for
the

PRO-51

that I think its about time to post it to the news groups.

{{{{{{{{{{{{{{
PLEASE READ THIS WHOLE PAGE FIRST }}}}}}}}}}}}}}

Scanners with ser # beginning with ' 4500 ' or after date code 7A4
(July

1994)

have had a new CPU installed and this keyboard modification will not
work.

******* DOING THIS WILL CLEAR ALL PROGRAMMED FREQUENCIES THAT YOU HAVE
IN

YOUR SCANNER, SO PLEASE MAKE A LIST BEFORE YOU

PROCEED *******

TEST MODES (these are TEST freqs that were permanately burned into
the

scanners CPU)

MODE 0---CLEARS ALL MEMORIES--PRESS (2) & (9) AND TURN ON

MODE 1---FILLS CHANNEL 1-25 WITH TEST FREQUENCIES--PRESS (2) &
(9) AND

LOCK-OUT AND TURN ON

MODE 2---FILL CHANNELS 1-17 WITH TEST FREQUENCIES--PRESS (2) &
(9) AND

MANUAL AND TURN ON

MODE 3-- DISPLAY TEST--PRESS (2) & (9) AND BAND AND TURN ON

You must press and hold the indicated buttons while turning on the radio.

HERE'S WHAT YOU DO:

MEMORY MODE 1 WILL FILL CHANNEL 23 WITH 888.969 MHZ WHICH IS WITHIN THE

BLOCKED CELL BAND.

STEP 1--OPEN SQUELCH AND STEP TO CHANNEL 23

STEP 2--PRESS THE UP OR DOWN ARROWS TO SEARCH THRU THE BAND. BE CAREFUL NOT

TO GO BELOW 868.950 OR ABOVE 896.100 OR YOU WILL HAVE TO GO BACK TO STEP

ONE.

******* ON SOME SCANNERS YOU MAY NEED TO SELECT MODE 1 IMMEDIATELY AFTER

STARTING MODE 3 ******

******* THIS IS THE ONLY WAY YOU CAN GET TO THE CELL BAND *****

(There are no hardwire mods. for the Pro-51)

******* TO STORE A CELLULAR FREQUENCY INTO A CHANNEL (1-200)

YOU FIRST MUST STORE IT INTO A "MONITOR CHANNEL" AND THEN

DO THIS ******

1:STEP TO THE MONITOR CHANNEL YOU WANT TO STORE (1-10)

2:PRESS (PROGRAM), THEN THE MEMORY CHANNEL NUMBER YOU

WANT TO STORE.

3:PRESS (PROGRAM), THEN (MONITOR) THEN ENTER

THIS MIGHT LOOK OR SOUND A LITTLE WACKED, BUT ONCE YOU DO IT A FEW TIMES

ITS A PIECE OF CAKE!!!!

GOOD LUCK AND LET ME KNOW HOW YOU MAKE OUT.

Eddie Kosloski

scanist@acmenet.net

This mod also works on the Pro-46 that I have.

I bought three now, from Santa Fe Distributing, for $229.00, plus
shipping.

The Uniden WWW page had them as B stock, for $159.00 plus shipping.

I have a "Compound" for sale. It is a 20 acre lot with bomb shelters, 2 yr supply of food, etc.
It is in a lovely wooded area with a babbling brook, and running water.

I am dying of cancer and will not probably live to see the inevitable "apocolypse" when the Government outlaws scanners, and you fat guys get out of your lawn chairs at the trailer park to "Revolt".

I think it would make a great place for a last stand.
I'm asking only $775,000 plus I hope that the lawn is mowed regulary.

Please respond here, and I will contact you as soon as my cancer advances to the critical stage.
Looking forward to hearing from you.

Perfect for the Anti-Government, Our-Rights-Have-Been-Violated, those-bastards-got-it-all-wrong, We-got-the-right-to -listen-to any-thing-we-want-like-the-Nazis-did Club House!
Just keep the lawn mowed, or I'll be pissed!

Message-ID: <5s3rtlmhg1@news2.uswest.net>
Source record: 189536

Cell Phone Monitoring Can Cause Ear Cancer:
Sentinel Daily News (Oct 10, 1996),
Repeated hearings of squelch-tone signals from cellular towers has been demonstrated to cause tumors in laboratory rats, and these are not the only victims. Scientists working in conjunction with the National Institute of Hearing Loss Technology have confirmed the cause of RSCT (Reductionary Sensitivity -Cellular Transmography). This repeated assault to the frontal auditory lobe (sans Maximus Audit) causes permant hearing loss including tinnitus in about half of subjects exposed to signals of greater than 400db.

much of the technical detail has been edited- for the purpose of this newsgroup

This means that not only cell phone users are at risk, but also Scannists (those who engage in "scanning" or monitoring cell phone calls with scanner radios) are susceptible to these transmissions. Scannists have the added disadvantage in that a high- pitched "carrier signal" is overheard with a scanner radio. This signal is filtered by the cell phones themselves, however the scanner radio has no such filter, and the scannist gets a "full dose" of the offending transmission.

Further evidence suggests that a medical coding taxonomy is appropriate, and all medical professionals should be educated...

here the article veers into Medical terminology which is of no interest the the scanner guy who only wants to eavesdrop on cell phone calls, so I've omited it

Write your congressman!
Write Write Write!!!

> advanced; boring his girlfriend to death..
>

Another way to do this (since the audio is not really "scrambled" but
just shifted - low frequencies to high frequencies, and high to low) is
to to have another "scrambled" cordless phone (doesn't even have to be
the same brand) Then tune in his base on ONE scanner, put the handset of
your phone next to this scanner, and listen to the base of your phone on
your OTHER scanner. The frequencies will be shifted again, making the
conversation listenable again.

Ramsey Electronics also sells a kit that will do this, only they used
the wrong center frequency, and the callers still sound a little donald
duck like.

Uh - sorry Joe

When I can go down to the local RS and buy a NEW 100 channel scanner for $80 that covers 29Mhz to 956 Mhz (non continuous, including Air Bands #20-2026)- why would I be interested in an overpriced, outdated unit? If you'd accept maybe $30 - I'd be interested, entil then - good luck!

Even so, check your bill. AES overbilled me $5 on an accessory, and added $1
to the bill for no rational reason. They didn't charge me the price that we
verbally negotiated. I'll assume that it was a snafu, but always check the
catalog, or web site to make sure that the clerk offered accurate pricing.

Could someone tell me how to enter new frequencies in this unit.

I inherited a working unit but without a manual. Either I've got
problems with it or it does things differently from the RS and Bearcat
scanners I use.

What I'm specifically looking for is the Regency version of this

On a RS unit I'd use the 'Manual' key to stop at channel.
Then hit the 'Program' key,
Type in a frequency
then hit 'Enter' key

Thanks for any help

Brub W4NNG

I've always wondered where this "public's right to know" comes from.
It's not in the Constitution or Bill of Rights, so who invented it?

Just wondering...
Brian

I do some work for the local Thrift Stores, here in Fort Worth, I have been using a ground plane antenna mounted about 30 ft. up.
The other day one of the stores had what looks to be a very heavy built A/S, cell antenna with a magnetic mount, I got it took it home and suprise it receives better than
the ouside antenna on all freqs, and it is just sitting on a table in the computer room, it does not have a model number on it but it is A/S, and made of very heavy gauge wire, as the stinger.

One of the reasons automobile radio shortwave converters are
no longer talked about, is because for many years now auto
radios have be synthesized for 10 KHz AM channel selection.
I.E., they no longer continuosly tune the AM band. As a result,
your auto radio would only be able to 'see' shortwave signals
in 10 KHz jumps.

There is a cordless phone in the neighborhood that makes a very weird noise. It's not the ringing noise, but it sounds a lot like it is resetting or something after a conversation. It sounds like a pager system, but is on one frequency. It sounds three or four times after the phone is hung up.

A friend of mine has a handheld Regency HX-1000 (I think that's
correct) which has a rather annoying problem.

Whenever he tries to run it on battery-power the radio will not work.
In fact, it loses everything stored in memory and must be pugged in
before it will operate.

He has tried new batteries without success. Any suggestion would be
appreciated.

Thanks in advance...

Boscoe@worldnet.att.net

>Does anyone know how to get discriminator output on an ICOM ICR7100
>for use with trunker 3.1?

If I recall, I tapped into the junction of R228 and R230.
R228 and R230 are located next to each other
on the "Main" printed ckt board, next to crystal discriminator X3.

I used RG174/U miniature coax cable to connect
the junction of the resistors to an RCA jack added
on the rear apron.

Consider buying an R7100A service manual from ICOM.
The current price is about $46 plus s&h. It contains
a wealth of info, including board layouts, theory, etc.

Good luck and happy monitoring.

3526. @@ is there a 500+ channel handheld scanner with FAST (>100 c/s) SCAN

Newsgroup: rec.radio.scanner
Date: 1997-08-05 00:00:00 UTC
From: techno55@actcom.co.il
Message-ID: <EEEyy9.6Gp@nonexistent.com>
Source record: 189320
Cross-posted to: alt.radio.scanner,alt.radio.scanner.uk,rec.radio.scanner

Hello Fellow Usenetter,

I'm currently looking for a handheld scanner with at least 500 channels and FAST (around 100 channels per second) Scan. I've evaluated two of the best handheld scanners but they don't comply:

1. AR-8000: has 1000 channels but scan/search is too slow.

2. BC-3000XLT: has fast search but only 400 channels.

3. The only other fast scanner I know (RELM HS200) has only 200 channels.

If anyone knows of such a scanner (or any other HANDHELD scanner with fast search that can be modified to have 500 channels or more) I'd sure appreceate his input.

When Replying, please email me directly in addition to posting here, so no responses are missed. Don't forget to remove the "55" from my email address inserted as an anti-spam counter measure...:-)

Thanks and best regards,
techno

Source record: 189321

OK. Any Radio Shack out there should have them, but they weren't _just_
for So Cal. I bought one each at the RS in the North County Fair mall
(Escondido) and in Rancho Bernardo in '92 and '93, respectively. A
better book, IMHO, is "Southern California Scan Fan." The RB store had
the phone# to get one; I drove up to the publisher's house in Escondido
to get mine. I still have the phone#, and in fact the book, if anyone
is interested.

Happy Scanning,
DK

A good example of a decent scanner owner. Most Police will admit that a well informed public is the best place for them to work, but unfortunately, the majority of scanner owners they run into are getting underfoot.
I too have helped the local PD numerous times, usually just by telling them what I saw, while they were still on the way to my neighborhood. Something I only would have known to look for by listening to my scanner.
I feel it is true that the vast majority of scanner owners are honest decent people, but we remain unseen, behind the scenes, and out of the way.

>People these days have no respect for the courteous operators who have
>chosen to run "full power" in the mobile.

I'm not sure, given the things you mentioned regarding transmitting with 2000 watts on the truckers' channel, PA interference, etc., that I would classify you as "courteous". For my money, people who abuse any radio service deserve whatever happens. It reminds me of a local guy who sold a car or something so he could buy a linear with three power levels: low, medium and high. 100, 150 and 250 watts. Anyone with knowledge of radio would know that is a joke to be played on an ignorant operator. Also, his 250-watt level would be just almost as loud as your 2000-watt level. Maybe an S-unit or so lower than yours.

Not sure what's going on....still no luck could you post the url direct to the page with the TT stuff? Think it may be a casch problem with my server...still getting the same thing after reloading a few times.

I'm sure it would make it a lot easier then hunting trough all those pages. Thanks.
Ron.

m>Not a dispatch, but....

m>Heard as EMT is giving radio report to hospital while enroute....

m>.....
m>patient has convulsions on her knees
m>...

Several years ago, we had a regular patient with seizures. The routine was thus: The patient would have a seizure, which in turn would wake up his dog. The dog would run around and bark wildly. Patient's elderly mom would wake up and call EMS. This was a weekly, sometimes daily routine. The patient was particularly nasty after his seizures, and the hospital dreaded it when we brought him in. Of course all of the staff in the ED knew the story. So, one time when we were transporting, I thought I would give them a different type of notification. I got the hospital on the radio, and my entire notification consisted of, "The dog is barking." They knew exactly who and what I meant and were ready when we arrived at the hospital. Of course the C-Med operator had no idea what I was talking about.

When I'm listening to my scanner, I routinely hear the incident commander at a fire telling his people to switch to a tactical channel. From that point on, I can't hear anything anymore.

Is it possible to pickup these tactical channels, or are they blocked out or something. I scan with a bc3000 xlt and I can get several freqs.

Thanks in advance.

I am selling for a friend 2 Motorola Visar radios in excellent like new condition. One of the radios has the large MH battery, the other has the slimmer one. The radios have a battery charger that holds both radios on the front of the charger. The radios slide on the charger. Everything looks like new.

The radios have a small window display that now shows 1a, 1b, 1c when switched. The model number is H05UCD6CB1AN. I believe they are for a truncked system on 800mz. He is asking $600 for the radios, batteries and the charger. Please email soon if you are interested as he is leaving for vacation this week. Thanks HT

There will be data packets sent to establish a connection between the
base and handset. Typically a security code will be reset each time a
hendset is returned to the cradle. Probably just a handshake signal
indicating the phone is no longer in use.

I got tired of the worthless light on my pro-43, so I went to the local hamfest and picked up a couple of junked cell phones. They are a good source of parts. I yanked the nice backlight out of one and promply placed it inside the 43. Some hot melt glue held the LED's in place so they didn't wander. Be careful with that LCD though, it's not held in there very well. Now I have a VERY nice backlight that I don't have to squint through a scanning elelectron microscope to see the display with. Anyway, hope someone else does this.

3568. ## Looking for a BC-3000XLT expert or hacker...:-)

Newsgroup: rec.radio.scanner
Date: 1997-08-05 00:00:00 UTC
From: techno55@actcom.co.il
Message-ID: <EEEyo8.5w7@nonexistent.com>
Source record: 189486
Cross-posted to: alt.radio.scanner,alt.radio.scanner.uk,rec.radio.scanner

Hello fellow usenetters,

I own a BC-3000XLT and am quite happy with it's performance (especially scan speed) but need more memory channels than the 400 available. Has anyone heard about a mod to expand the number of available memory channels? Here's what I've got:

1. The BC-3000XLT stores it's channel info in a 2Kbyte serial EEPROM. That makes expanding even more difficult.

2. As a first choice, I'd prefer to expand the memory to get ONE larger block (since I need to concurrently scan more than 400 channels), but I'd settle for switched block expansion if only that is available.

When Replying, please email me directly in addition to posting here, so no responses are missed. Don't forget to remove the "55" from my email address inserted as an anti-spam counter measure...:-)

Thanks and best regards,
techno

WHY IS IT THAT PEOPLE LIKE YOU DON'T BELIEVE THE TRUTH?
Maybe you will need to be arrested before actually believing that this kind
of thing happens ALL the time!

: How about overhearing a conversation in a restaurant or in a mall?

This is a good point. You can not provide secure communications
by outlawing eavesdropping! It doesnt work, never has. All you do
by outlawing it is to give people a false sense of security in there
conversations, while all along both the goverment or any possesors
of outlaw scanner equipment can listen to teh conversation... the
correct method to provide secure communications over a broadcast
type medium is encryption... but of course then the goverment cant
hear you either :)

The whole thing is ridiculus. (Hmm cant spell :)

The OLD Bearcat 210 scanner, (10 channels, Red LED display) does not have
a receiver capable of tuning above 512 MHz, therefore no mods could be done to
give you that capability.

Date: 1997-08-06 00:00:00 UTC
From: grohe@galaxy.nsc.com
Message-ID: <33e80c46.2357072@139.187.81.1>
Source record: 189350

On Tue, 05 Aug 1997 07:52:45 -0400,
in the newsgroup rec.radio.scanner,
Bob Brubaker <bob@belvoir.army.mil.NOSPAM>
from X-no-archive: yes thoughtfully posted:

> Could someone tell me how to enter new frequencies in this unit.
>
> I inherited a working unit but without a manual. Either I've got
> problems with it or it does things differently from the RS and Bearcat
> scanners I use.

Yup. It is different.

I'm used to Regency/Bearcat, and now I am getting used to a
PRO-60!

> On a RS unit I'd use the 'Manual' key to stop at channel.

Same.

> Then hit the 'Program' key,
> Type in a frequency
> then hit 'Enter' key

Close, you just do not have the intermediate step of pressing
"PROGRAM". Regencys are in "PROGRAM" mode whenever they are not
scanning. Simply select the channel, enter the frequency and
press <enter>.

Step to the channel by pressing <MANUAL>, or directly enter the
channel by pressing:

<x> <x> <ENTER>

To program 162.55MHZ in ch 5:

<MANUAL> <0> <5> <MANUAL> <1> <6> <2> <.> <5> <5> <ENTER>

(The first <enter> is optional, just to make sure it is ready)

Lockout/enable can be confusing if you are not used to it. You
toggle the lockouts by entering the channel number WHILE IT IS
SCANNING.

If you want to lock out ch.1, while it is scanning, press <0> <1>
(but do not press enter).

To un-lockout the channel, press <0> <1> again (while scanning).

Hint: An easy way to see what channels are enabled is to press <scan>, open the squelch and step through the enabled channels using the <scan> key. If you want to enable/lock-out a channel, just enter the channel number, since you are already in "scan" mode.

To search a range of frequencies, enter:

<manual> <search program>

1 6 2 . 4 <enter> <lower> (the "1" key)

1 6 2 . 6 <enter> <upper> (the "2" key)

<search scan>

Press <search scan> to continue scanning if a undesired signal is received.

Exit search mode by pressing <MANUAL>

You can change the scan speed by pressing the <ENTER> key while it is scanning.

Beware of the keyboard lockout switch on the left side. It is easily "flipped" by slipping the radio into it's case, or by "bumping" it with your finger. The only key that will work is the "scan" button on top.

Also, keep an eye on the BNC connector. They use a cheap connector that uses a "U" shaped center finger that can "spread" apart after repeated use/abuse. Carefully bend it back, or replace the connector with a good quality Pamona or Amphenol connector.

Good Luck!

Cheers,
Paul Grohe

(After about a dozen people backing out of deals, here it is again...)

I am selling my Radio Shack PRO-24 800mhz scanner for $65 including shipping. This scanner picks up all the lower cordless phones, and even the newer 900mhz phones that are supposed to be more secure. But of course, listening to them would technically be against the law. It has 16 channels where you can save your favorite frequencies, but you can also direct enter them to listen. It also has the National Weather Service frequencies at the touch of a button so you can get the latest forecast.

It has a power jack, a charging jack, and an earphone jack. It doesn't have a belt clip, but it has a place for one. It has the nice short "rubber duck" style antenna, which is very rugged. This scanner also comes with the original instruction manual. This scanner is in GREAT condition... no scuffs or scratches. Works perfectly.

Radio Shack Pro-24 (Model #20-503) Frequency Coverage:

VHF-Lo.....29-50 MHz (in 5 kHz steps)
Amateur Radio.....50-54 MHz (in 5 kHz steps)
Government.....137-144 MHz (in 5 kHz steps)
Amateur Radio.....144-148 MHz (in 5 kHz steps)
VHF-Hi.....148-174 MHz (in 5 kHz steps)
Amateur Radio/Government.....406-450 MHz (in 12.5 kHz steps)
UHF Standard.....450-470 MHz (in 12.5 kHz steps)
UHF "T".....470-512 MHz (in 12.5 kHz steps)
UHF Public Service..... 806.0000-823.9375 MHz (in 12.5 kHz steps)
851.0000-868.9375 MHz (in 12.5 kHz steps)
896.1125-956 MHz (in 12.5 kHz steps)

If you would like to hear a WAV audio file captured from this scanner, please go to this link... http://members.aol.com/rubbertow/scanner.wav

$65 including shipping in the US. Thanks, Rob - rbatina@infinet.com

How does one, or can one, change the 'steps' of a scanner? I have the Pro-29, and when talking to someone on the net about some of the freq. to scan for in my area (Boston), they suggested changing the 'steps' in my scanner.

I'm guessing this is the amount that the scanner will jump when scanning, but couldn't guess how to change it. (and of course nothing mentioned in the 'directions' that came with it)

Any ideas?

Thanks.

So later on down the road when they try to outlaw various types of encryption, they can say, "But look. We've outlawed snooping, so you have no reason to want to encrypt. Your privacy has been secured through legislation and so if you insist on encryption you must be doing something you want to hide from us, the authorities who protect you."

I don't like the legislation, either. At best it's useless, at worst it gives them another half-baked reason to try to keep us from effective encryption.

Lynette

No, a letter is NOT out in the open. An envelope provides
privacy.
However, it is kind of like mailing an uncoded POST CARD via the
US mail. I think anyone expecting any kind of privacy or confidentiality
would be an idiot to write a message on an open post card, less it was
encoded.
And the same goes of unencrypted radio transmissions.

> A very poor analogy. A letter is sealed and not in the hands of
>the public. A radio transmission is broadcast in the clear. If

It was such a poor analogy it made our point for us.

ATTN NASCAR FANS:
This law WILL make it impossible to get scanners to receive
transmission at races, so for *all* of us who like listening to
scanners, it is important for us to let our representatives know
that this is a bad bill and should be defeated.

From: FTN <ftn@hotmail.com>
Message-ID: <33E953A4.446C@hotmail.com>
Source record: 189360

I am selling my Yaesu FT-990 HF transceiver with built in 90 channel scanner.

The radio tunes continuously from 100kHz to 30MHz. It transmits and receives in AM, FM, SSB, & CW. It has not been modified to transmit out side of the Ham bands. It has a built in antenna tuner, SSB crystal filter (2.0k), digital readout, 90 memory channels, and lots more goodies. Two mics come with it. The hand mic and the MD-1 desk mic. The output power is adjustable from 1 to 100 watts.

The rig is in like new condition because I never use it. I purchased the rig new so I have the original box and manual.

The price is $1,450.00 plus shipping. If you are in the Denver area you can pick it up. I would prefer a cashier's check but if necessary we can run the transaction through my company Visa/MasterCard account.

If you would like any further information, please contact me at 303-674-0510 or E-mail me at ftn@hotmail.com

JC>Can the different systems be distinguished by their on-air sound?
JC>Brevard County transmissions are followed by a series of same-pitch
JC>beeps: beep, beep, beep, beep

JC>Usually four beeps, but sometimes more or less.

From the sound of it, that is a GE/Ericcson system. The trunk tracker
will not follow that type of system.

I have an AOR AR-2515 communications receiver/scanner for sale. This
is an early version of the AR-3000 (looks just like it) covers 5-1500
mhz, has 2000 memories scans plus has vfo. Receives in AM, NFM and
WFM modes. I have the manual and a computer interface for it. Price
is $300 I ship or will do some trading for a wideband, multimode
handheld, AR-8k, Yupi, IC-R10 etc.
Please reply via e-mail to kg5un@juno.com
Thanks, ED

>selectivity. Great design too and lotssss of features.

Hello,

FYI, we developed a very simple mod to restore cellular in the R10.

Consists of adding two 10K SMD resistors across two sets of empty
pads, and resetting the micro.

If you'd be interested, we provide details of the mod for $1 plus a
SASE.

We also sell the R10 and all other ICOM commercial and receiver
products.

3606. Bearcat 800XLT question

Newsgroup: rec.radio.scanner
Date: 1997-08-06 00:00:00 UTC
From: phoeg@sprynet.com
Message-ID: <33e7fec4.4883107@news.sprynet.com>
Source record: 189415

I recently picked up a Bearcat 800XLT at a pawn shop for $65. It works great and was/is in great
shape. I guess it was owned by a local police officer. First question is: is that a good price? The
woman originally had a tag for $75 but said if I wanted it that day she'd take $65. I'd seen another
used one at a local ham radio store for about $150, and I've seen them advertised privately for up
to $200, so =I= was happy with the price.

My other question concerns antennae. It has three places for antennas- the standard one that you can screw in from the top of the unit, but on the back are =two= jacks. Both are Motorola types, and one is empty , and the other has a little 3" antenna plugged into it. I found this abundance of antenna options surprising, but I was more curious as to what the little antenna on the back was (if anything important/significant), and what difference, again, if any, the is between an external antenna plugged in =there= as opposed to the jack specifically marked "External Antenna."

Oh, and if anyone has a manual they'd be willing to photocopy (assuming it's not too long) I'd be
more than happy to send the $$$ to cover copies and postage.

Thanks.

Paul N8HOB/1 (Hamden, CT)

Newsgroup: rec.radio.scanner
Date: 1997-08-06 00:00:00 UTC
From: jtward01@aol.com
Message-ID: <19970806122400.IAA20076@ladder01.news.aol.com>
Source record: 189422

I went into my local RS store the other day to buy one of the discone antennas at the "clearance" price and was told by the store manager that they were not on clearance, and that the price was the normal $59.95. I could see his computer screen over his shoulder, and he was telling the truth, as least so far as the information he had was concerned. There was nothing to indicate that the antenna should be marked down.

I have a nice Pro-2021 Scanner. Covers 30 - 54; 108 - 136; 138 - 174;
410 -512mhz. 200 memory channels. The light panel is dim (has been
since I got it last year in a trade) (doesn't cause a problem for me)
Memory battery cover on back is gone. Otherwise the unit looks great
and works great. I am looking to trade for something different.
Suggestions on the list below, but I am open to anything you think may
be interesting in the scanner / Sw recvr. area. Write me with your
thoughts for a trade.
Here is the list:
Magnavox D2999 SW Recvr
Sangean AS-803, 818 or 818-C SW Recvr
Realistic Pro-2026 Mobile Scanner
Realistic Pro-41 HH Scanner

You can tell when something is going to be discontinued if its sale price
ends in .97 . Otherwise, it will be around for a while.

3623. Yupiteru MVT9000 & MVT7100

Newsgroup: rec.radio.scanner
Date: 1997-08-06 00:00:00 UTC
From: Martyn Allison <martyn@intecc.co.uk>
Message-ID: <33e8d654.0@norbert.cerbernet.co.uk>

I apologise straight away to those who do not like advertising on the net , however I feel that I should make you all aware of some great deals we are offering at the moment. The Yupiteru MVT9000 at $495 plus $20 shipping and the MVT7100 at $315 plus $20 shipping and finally the AOR AR8000 at $405 plus $20 shipping. All the above come supplied with all the accessories etc and are unblocked. For further info take a look at our web site http://www.multicomm2000.com or e mail sales@multicomm.com

Thanks for reading this message and I hope you like the web site , which is always being up graded.

Happy listening
Martyn

3625. Trunking Question Answered (Boward County)

Newsgroup: rec.radio.scanner
Date: 1997-08-06 00:00:00 UTC
From: tomokla@aol.com
Message-ID: <19970806201500.QAA17333@ladder01.news.aol.com>
Source record: 189434

The Boward County system is Ericsson and the Trunktracker will not follow it. You can however program to alike suffixs in desending order and follow the transmissions.

3626. Channel Master 5094a (Gain, or not)?

Newsgroup: rec.radio.scanner
Date: 1997-08-06 00:00:00 UTC
From: kiska911@aol.com
Message-ID: <19970806192501.PAA14020@ladder01.news.aol.com>
Source record: 189435

Does the Channel Master 5094a have any gain? If so, how much? If not, why is it such a popular antenna for scanning?
How does it compare against a discone with the low band whip? (I know the discone has no gain)
Am interested in low band reception and wanted to know which of these antenna's might be the better performer.
Thanks for the advice.

3629. Uniden 895XLT

Newsgroup: rec.radio.scanner
Date: 1997-08-06 00:00:00 UTC
From: "Bruce A. Langos" <bruce.langos@daytonoh.ncr.com>
Message-ID: <01bca2af$a2860580$2ef77fc0@langob>
Source record: 189438

Sante Fe Distributing is now taking orders for the new 895XLT TrunkTracker.
Right now the estimated price from them is $279.99. Could go lower they
said depending on what Uniden does.

Does anyone know of a place on the internet where I can find the
frequencies used by the various FAA enroute traffic control centers?
Navaid has the airport frequencies but not these.

Very few scanner producers have improved the scan rate over the years.
Its sort of hard to believe when you consider the massive amounts of
improvments in processors.
They probably are using old early 80s technology still since its dirt
cheap, yet charging high dollar.

I have a $1000.00 dollar scanner that only scans at 50 channels per
second and that is if everything is perfect. Most of the time the AOR
3000a scans at 25 to 30 per second, but they do not tell you this when
you go to buy it you see.

3638. trunking in minneapolis

Newsgroup: rec.radio.scanner
Date: 1997-08-07 00:00:00 UTC
From: jweid@primenet.com
Message-ID: <jweid-0708970834570001@ip207.msp.primenet.com>
Source record: 189247

Hello,

I live in the minneapilis area and am new to scanning. I was wondering
to any police/fire depts use trunking systems? enough to pay extra for a
trunk tracker?

Thanks,
Sam

WOW! I am amazed at how many well informed users there are in this
NG!!! James, you are exactly right. It will not be long before the
Feds call for dropping the borders with Mexico. They will tel use it is
for our good that we open our borders to the world, but they can lie
very easily.

>scanner....he must have had an original reason for stopping you???

Don is limited in his ability to discuss the incident due to the court settlement. The reason for the original stop related to him being observed talking on the radio in the first place. It had nothing to do with any criminal activity on his part. Nor was the Police Officer a "Jack Booted Thug", just a poorly informed rural jurisdiction Law Enforcement Officer. Don is one fine guy. He doesnt need to answer to your implied accusations. Personally, I'm sure that anyone who commonly refers to Law Enforcement Officers as "Jack Booted Thugs" is probably doing something illegal.

Mistakes happen. Life is not perfect. Perhaps that's why we have lawyers. Too bad. Happy Scanning.

For Sale GRE Super Converter 8001
Converts 800 MHz down to 400 MHz (roughly the down-convert).
If you need to ask what it is or does you probably don't need it.
$30.00+Shipping.

GREAT for scanners that have the cellular band blocked out.

Believe it or not, the Twin Cities is one of few metro areas that has NOT succumbed to the 800Mhz hype and pressure. Bloomington, Eden Prairie, and the Mega Mall use it...but that's all. Mpls and St. Paul are still on 460Mhz, and everyone else is still using plain 'ol 154-156Mhz VHF.

3660. Dangerous Bill in Congress

Newsgroup: rec.radio.scanner
Date: 1997-08-07 00:00:00 UTC
From: "James F. Boehner, MD" <jboehner@scescape.net>
Message-ID: <33E9E3FF.28F6@scescape.net>
Source record: 189269
Cross-posted to: rec.radio.amateur.equipment,alt.radio.scanner,rec.radio.scanner

To all radio enthusiasts:

I received the following on the SCAN-L list regarding a bill in congress that would seriously restrict the rights of radio hobbyists, Amateur Radio and Scannists alike.

Action is needed NOW to contact your local representatives. There is an effort to amend the Communications Act of 1934. If passed, it would be illegal to monitor any of the land mobile transmissions. This would effectively prohibit extended receive on VHF/UHF Amateur Radio rigs and perhaps eliminate scanners completely.

This is a serious threat to the rights of radio hobbists. Please read the following below, and TAKE ACTION! Call, or FAX your representatives IMMEDIATELY!

'73 de JIM N2ZZ

Please give this information the widest possible dissemination on all hobby
forums. The author of this message grants permission to repost or reprint
the information below unconditionally.

Here is the latest legislative threat to the monitoring hobby. Folks this
bill is pure poison to all branches of the radio hobby. In particular. I'm
extremely concerned with section 3 of this bill amending the Communications
Act of 1934. Every radio listener and ham needs to contact their elected officials in Washington and voice opposition to this bill.

Unlike the Markey bill, HR 2369 does have cosponsors and given the timing in
the legislative calendar, I feel it does have an excellent chance of getting
through Congress this session. This bill has the same provisions in it as
the Markey bill (HR 1964) plus the new language on scanner mods in section 1
and the new very restrictive language for the Comm Act of 34 in section 3.
This effects every radio listener from shortwave right on up to the microwave regions. If your hobby is listening to something other than

broadcast radio or television, ham or CB this bill could and probably
will
effect you.

Bottom line:
I will be posting additional info and analysis after we talk to the
legal
folks. On the surface, this doesn't look good at all. We are going to
have a
major fight on our hands here.

Best Regards,

Larry Van Horn
Assistant Editor/Managing Editor
Monitoring Times/Satellite Times
